

Whhoohh Path HRMS

Biometric attendance · payroll · leave · people · projects — phone and web

What it does. Whhoohh Path HRMS runs the whole people operation of a company — from the day somebody is hired to the day they leave. Employees check in with a fingerprint, apply for leave, read payslips and work their tasks from a phone. HR runs payroll, issues letters and reads the reports. The founder sees the company. It is sold by subscription: one deployment serves many companies, and no company's data is ever reachable from another.

Attendance you can prove

Fingerprint or face, verified by the server — not a yes/no the app reports about itself.

The whole HR operation

People, leave, payroll, projects, assets, letters and reports in one system.

Phone and web, one account

Native app for daily work; the full portal carried inside it, already signed in.

Built for many companies

One deployment, any number of tenants, and no row ever crosses between them.

PEOPLE & RECORDS

- Employee directory — designation, department, reporting manager
- Full record: personal, contact, statutory and employment fields
- Employee codes generated automatically, never typed
- Departments, designations and grades defined per company
- Reporting hierarchy, and who reports to whom
- Recruitment: candidates, interviews, outcomes, offer to joining
- Joiner set-up in one operation — record, login and leave balances

ATTENDANCE & TIME

- Biometric check-in and check-out from the phone
- Selfie and GPS login place captured with each punch
- Signature verified against a key enrolled on that handset
- Daily record: in, out, hours worked, status
- Own history for everyone; the whole company for HR
- Exceptions corrected by HR, never by the employee
- Company calendar — holidays, events and personal schedule
- Live presence: who is reachable right now

LEAVE

- Leave types and entitlements set per company
- Apply from the phone in under a minute
- Balance and dates checked at submission, not afterwards
- Approve or reject — a rejection must carry a written reason
- Balance adjusted in the same transaction as the decision
- Decision emailed, and readable in the same row
- Leave shown on the calendar alongside holidays

PAYROLL & FINANCE

- Salary structure held per employee
- Payroll computed from the structure — never re-typed
- Payslips issued individually or for everyone at once
- Payroll summary for each period
- Payslip reaches the employee's app and inbox together
- Company bank details entered and verified by different roles
- PAN, Aadhaar and bank withheld from every role but HR and the person

PROJECTS & TASKS

- Projects with members, dates and status
- Tasks with priority, checklist, attachments and stages
- Move a task along and report completion
- Permission is per field — move, re-scope and report are separate rights
- Checklist and task progress stay in step automatically
- Team board and reporting view for managers

DOCUMENTS & ASSETS

- Twelve letter types: offer, appointment, joining, confirmation, experience, relieving, certificate, internship, promotion, appraisal, warning, termination
- Generated from live data, on company letterhead, with a reference
- Employees open and share their own letters from the app
- Policy handbook, versioned when it changes
- Assets issued and returned, tracked by serial number

COMMUNICATION

- Messaging inside the HRMS, with unread counts that are always right
- Attach a photo, camera shot, document, location, contact, poll or event
- Voice notes, emoji, and search across every chat or inside one
- Edit within 15 minutes; delete for everyone within an hour
- Announcements to the whole company
- Email through the company's own SMTP — payslips, letters, resets
- Every send logged, whether it succeeded or not

REPORTING

- Six reports: employees, attendance, leaves, tasks, projects, hierarchy
- Personal counters on every dashboard
- Append-only audit log, readable by HR and editable by nobody

ADMINISTRATION

- Multi-tenant — one deployment, any number of companies
- Subscription plans switch modules on and off per company
- Seven roles, plus a platform administrator above them
- Company branding, letterhead and email settings
- Time-boxed, logged support access

SECURITY

- Row-level security on every table
- Every write re-checked by the database, not by the screen
- Passkeys on the browser; device keys on the phone
- SMTP credentials encrypted; TLS end to end
- Login throttling, rate limits and security logging (ISO 27001 controls)

Two apps, one account, one database

React Native app for Android and iOS · React web portal · Node API · PostgreSQL · your own SMTP
A permission changed once takes effect on the phone and on the web at the same moment — and every read is scoped to the company before the role is consulted.
