

Block diagram

the screen, top to bottom

HOME SCREEN

Header

Greeting · your email · your initials in a circle
→ the circle opens your Profile

Attendance card

State dot · “Not clocked in” / “Checked in” / “Checked out” · In and Out times · the button
→ the whole card opens the Check in tab

Two counters

Leaves pending · Open tasks — both counting only your own
→ each opens its own module

HR Portal & Operations

Issue Letter · Approve Leaves · Reporting · Policies
→ HR, Founder and Company Admin only — an employee never sees this row

Quick actions

Attendance · Leave · Calendar · Payslips · More
→ the first four open that module; More opens the grid

My Schedule

Your month — holidays, events and your own leave

Latest announcement

The most recent company notice, in full

How to use it

operations in order

1. Land on Home

- The app opens here every time, whether from cold or from the tab bar.
 - Nothing loads on a tap — all five tabs are already mounted.
 - Pull the screen down to refresh everything on it.

NOTE Home routes and owns nothing. Tapping “Payslips” lands on the real payslips screen, never on a dashboard copy of it.
2. Read where you stand today

- The card reads “Not clocked in”, “Checked in” or “Checked out”.
 - The In and Out times sit under it, empty until each punch is made.
 - The two counters are yours alone — not the company's totals.
3. Go to check in

- Tap anywhere on the attendance card.
 - The button reads Check in, Check out, or View attendance depending on the state of the day.
4. Jump straight to a module

- Leaves pending → the Leaves list. Open tasks → the Tasks list.
 - Quick actions → Attendance, Leave, Calendar, Payslips.
 - More → the full module grid.
5. Open your profile

- Tap your initials at the top right.
 - The sheet opens over whatever tab you are on.

NOTE The circle is not decoration — it was the first thing people tapped, so it opens the profile.
- Whhoohh Path HRMS — Screen by Screen · block diagram and operations · 13 September 2026

Sheet 1 of 5

Block diagram

the screen, top to bottom

CHECK IN SCREEN

Device status

“Not set up for you” → Set up · “Set up for your check-in” → Remove
→ one-time enrolment, per phone

Today

Check In and Check Out times, and the state of the day

The action button

“Check In with Biometric”, then Check Out — and nothing once both are made

Verification screen

Camera preview · Retake · the login place resolving from “Detecting login place GPS...” into a street and district · Confirm · Cancel
→ opens only after the biometric has passed

Result

“Checked In Successfully — biometric verified with selfie photo and login place recorded”

History

Your own past days, newest first
→ the same rows as Modules → Attendance

How to use it

operations in order

1. Set the phone up — once

- Open Profile, find the device row, tap Set up.
 - Complete the phone's fingerprint or face prompt.
 - The row changes to “Set up for your check-in”.

NOTE Your phone needs a fingerprint or face registered AND a screen lock. Without a screen lock the key cannot be stored safely and the app refuses.
2. Check in

- Tap Check In with Biometric.
 - The server issues a one-time challenge — so a signature can never be replayed later.
 - Reading your private key raises the phone's own biometric prompt. The app cannot skip or fake it.
 - Only after it passes are the camera and location asked for.
 - Take the selfie; wait for the login place to become an address.
 - Tap Confirm.

NOTE Decline the camera or the location and the punch is still recorded — the message tells you which of the two was kept. Decline the biometric and nothing is recorded at all.
3. Check out

- Same sequence at the end of the day.
 - Both times then show on the card and the day is closed.

NOTE One check-in and one check-out per day.
4. If something goes wrong

- “Not recorded” — the biometric failed or was cancelled. Try again.
 - “Session Expired” — sign in again; the app offers the button.
 - “Location fix unavailable” — the punch still goes through without a place.
5. Change phone

- Profile → Remove on the device row.
 - Set up again on the new handset.

NOTE Each account has its own key slot, so enrolling a second person on the same phone does not overwrite the first.

the screen, top to bottom

MODULES TAB

The grid

Twelve tiles, four across, each in its own colour

→ a module your role has no use for is not drawn

Inside a module — search

“Search leaves...”, “Search people...” — filters what is on screen, not the server

Screen action

Apply (Leaves) · Generate (Letters, HR only). Most modules have none.

The list

Each row: title · subtitle · a figure on the right · a coloured status badge

Row actions

Approve / Reject on a pending leave · move a task along

→ offered on the row; the database decides whether they run

Detail

Letters open the document itself · Calendar opens the month · the rest expand in place

How to use it

operations in order

1. Open the grid

■ Tap Modules. Twelve tiles, four across.

■ A module your role has no use for is not drawn at all — no greyed-out rows.

■ An employee sees eleven; Reporting Hierarchy is HR-level.

NOTE

Two gates decide what appears: the company's subscription must include the module AND your role must permit it.
2. Work a list

■ Tap a tile. The list loads through the same endpoint the web portal uses.

■ The rows you get back are already yours — an employee's leave list holds their own, HR's holds everyone's.

■ Use the search box to narrow what is on screen.
3. Act on a row

■ Leaves: Apply at the top; Approve or Reject on a pending row.

■ Tasks: open it, move it along, report how far it has got.

■ Letters: open the document, then share it. Generate is HR-level.

NOTE

A rejection needs at least ten characters of reason — the employee reads it in the same row.
4. When an action is refused

■ The screen shows the database's own words, not a generic error.

■ “Not done”, “Could not apply”, “That did not work” each carry the real reason underneath.

NOTE

Approve and Reject are currently drawn on any pending row whatever the role. The database refuses correctly, but it should be gated on the screen too — worth fixing before a demo.

Every module, and what it holds

the full grid, in order

Module	What a row shows	What you can do	Who can
People	Name · designation · work email	Search and read	Everyone
Tasks	Task · project and assignee · status badge	Open, move it along, report progress	Everyone, on their own tasks
Leaves	Type · dates · days · status, with the decision note	Apply; Approve or Reject a pending row	Apply: everyone. Decide: manager, HR, founder
Payslips	Month and year · net pay · gross as a badge	Open and read	Own only; HR and founder see all
Projects	Project · description · status	Open and read	Everyone
Attendance	Date · in and out times · hours · status	Read	Own only; HR and founder see all
Reporting Hierarchy	Who reports to whom, grouped	Read	Founder, Company Admin, HR only
Assets	Item · category and serial · assignment	Read what is issued to you	Everyone
Policies	Title · the policy text	Open and read	Everyone
Letters	Type · employee and issuer · reference	Open the document and share it; Generate	Open: own. Generate: founder, admin, HR
Calendar	The month — holidays, events, your own leave	Read	Everyone
Announcements	Title · body · category	Read	Everyone

Block diagram

the screen, top to bottom

How to use it

operations in order

1. Start a conversation

- Open the Messages tab.
 - Pick an existing thread, or tap the new-message button and search colleagues.
 - “Message yourself” is always at the top — personal notes and records.

NOTE The badge on the tab counts unread whether or not this screen is open, because Messages loads at launch rather than on first open.
2. Send something

- Type and tap Send.
 - Emoji: tap the face — Smiles, Hands, Popular and Work categories.
 - Voice note: press and hold the microphone; slide away to cancel, release to send.
 - Attach: tap the clip for the eight options.
3. What you can attach

- Gallery — a photo already on the phone. Camera — take one now.
 - Location — your current place. Contact — a colleague's details.
 - Document — a PDF or file from the phone. Poll — a question with two options.
 - Event — a calendar entry. AI images — see the note.

NOTE “AI images” currently sends a fixed line of text rather than generating anything. Either finish it or take it out before a client demo.
4. Fix a message you have sent

- Press and hold it.
 - Edit — within 15 minutes of sending. The message is then marked “edited”.
 - Delete — “Delete for me” any time; “Delete for everyone” within an hour.
 - Forward — send the same text into another conversation.

NOTE A deleted message leaves “This message was deleted” in place rather than a gap, so the thread still reads correctly.
5. Find an old message

- From the thread list: Search chats & messages.
 - Inside a conversation: the magnifying glass, then Search in Conversation.
6. Know who is there

- A green dot means the app is open on their phone right now.
 - Otherwise the header shows when they were last seen.
 - Two ticks mean read.

NOTE There is no “going offline” message — the server keeps the last time it heard, so a flat battery, a tunnel and a closed app all resolve correctly.

Block diagram

the screen, top to bottom

PORTAL TAB

The WebView

The full web HRMS, rendered inside the app

Session hand-off

Your token is written into the page before its first line of code runs
→ which is why it opens already signed in

Theme hand-off

Light, dark or follow-the-phone is passed across too
→ the portal matches the app, not the browser

Stays loaded

Switching tabs hides it rather than unmounting it
→ your scroll position and any open form survive

If it cannot load

A retry button rather than a blank white screen

How to use it

operations in order

1. Open the portal

■ Tap the Portal tab and wait for it to load.

■ It opens signed in as you — no second password.

NOTE Same account, same permissions. You see exactly what you would see in a browser and nothing more.

2. What lives there and not in the app

■ Payroll runs and salary structures.

■ Recruitment, company bank details, settings.

■ The six company reports.

■ Change your password: Profile → Change password.

NOTE There is no change-password screen in the app itself — it is here, or through Forgot password on the sign-in screen.

3. Move between the two

■ Switching tabs does not reload the portal.

■ Android's back button closes what is open inside the portal first, then returns to Home.

4. Your profile

■ Tap your initials at the top right of Home.

■ Read your record; manage the enrolled phone; sign out.

NOTE Removing the device only removes it from this phone. Set it up again at any time.

Profile

opens over any tab, from your initials

Your details

Employee code · Designation · Department · Joined · Phone

This device

“Set up for your check-in” or “Not set up for you” · Set up · Remove
