

HRMS Mobile Application

Complete User Guide, Module & Workflow Documentation

User Guide · UI Documentation · Screen Documentation · Icon Guide · Block Diagrams · Workflow Documentation

Product	Whhooohh Path HRMS — Android & iOS mobile application
Version	Application v1.0.0 · Documentation revision 1.0
Bundle ID	com.whhooohhpath.hrms
Platform	React Native (Expo) client · Node API · PostgreSQL with row-level security
Audience	Client administrators, HR team, finance team and all employees
Prepared by	Whhooohh Path LLP
Date	7 September 2026
Classification	Confidential — for the named client only

BEFORE YOU PRINT THIS DOCUMENT

Every screen in this manual carries a dashed green [SCREENSHOT PLACEHOLDER] box. Capture the screen on a real handset, then paste the image into the box it belongs to — the box will grow to fit.

Appendix D lists every placeholder in the document as a tick-list, so nothing is missed.

Document Control

This page records what this document covers, who it is for, and how it should be kept up to date once the application is in the client's hands.

Revision history

Revision	Date	Prepared by	Summary of change
1.0	07 Sept 2026	Whhoohh Path LLP	First issue. Covers the complete mobile application — all seven roles, every native screen and every in-app portal screen, with block diagrams, workflows and screenshot placeholders.

What this document is

A single, self-contained manual that serves six purposes at once:

This document is a...	Which means
User Guide	Step-by-step instructions for every task a person can perform in the app, written for someone who has never opened it before.
UI & Screen Documentation	A described walk-through of every screen: what is on it, where each element sits, and what each element is for.
Icon Guide	A complete glossary of every icon in the application, with its meaning and the screens it appears on.
Module Documentation	The application broken down by module and by role, so an administrator can see exactly what each role can and cannot reach.
Block Diagrams	A structural diagram for every screen, showing how what the user sees connects to the data behind it.
Workflow Documentation	An end-to-end flow for every screen and every process, from login to the completed action.

How this document is organised

The manual runs from the general to the specific. Parts A and B describe the system, its design language and its roles. Part C onwards is the screen catalogue — every screen documented in the same eight-part format, grouped by the module it belongs to.

Part	Sections	What you will find
A — The system	1 – 3	What the application is, how it is built, its design language (colours, typography, sizing) and the complete icon glossary.
B — Roles & access	4 – 6	The seven user roles, a full permission matrix, how to install and sign in, and the navigation map of the whole app.
C — Common screens	7	The screens every role shares: login, home, check-in, modules, messages, profile, the in-app portal.
D — Employee module	8	Every screen an employee uses, in the order they meet them.

Part	Sections	What you will find
E — HR module	9	Every screen the HR Admin adds on top of the employee set.
F — Admin module	10	Every screen the Founder / Company Admin adds on top of the HR set.
G — Specialist roles	11	Project Manager, Team Lead and Accounts Manager — what each adds and what each is denied.
H — Platform administration	12	The multi-company console, for the party that operates the HRMS itself.
I — Appendices	13	Status and badge reference, message and error reference, the screenshot tick-list, troubleshooting and a glossary.

The eight-part screen format

From Section 7 onwards, every screen is documented under the same eight headings, in the same order. Once you have read one screen you can read any of them.

#	Heading	What it tells you
1	Purpose	Why the screen exists and what job it does.
2	UI Components	Every visible region of the screen and what it shows.
3	Icons & Buttons	Every icon and control on the screen, its label, and what it does.
4	How to Use	Numbered instructions for the screen's main task.
5	User Actions	Everything the user is able to do here.
6	Expected Result	What the application does after each action, including the exact on-screen messages.
7	Block Diagram	How the screen is built, from what the user touches down to the data and the rules.
8	Workflow	The end-to-end flow through the screen, including the decision points.

A NOTE ON THE SCREENSHOT PLACEHOLDERS

Each screen begins with a dashed green box reading [SCREENSHOT PLACEHOLDER – SCREEN NAME]. Click inside the box, delete the two lines of placeholder text and paste the screenshot; the frame will resize around it.

Capture screenshots on a handset at its native resolution in portrait. Do not scale them down before pasting — Word will fit them to the frame width on its own.

Appendix D lists every placeholder in this document in order, as a tick-list for whoever collects the images.

1 Introduction & System Overview

1.1 What the application is

The Whhoohh Path HRMS mobile application is the phone-side of a complete human resource management system. It is a native application for Android and iOS, published under the identifier com.whhoohhpath.hrms, and it is used by everybody in the organisation — from a new joiner marking their first day's attendance to the founder approving a month of payroll.

The application does three distinct jobs, and it is worth separating them at the outset because they explain the shape of everything that follows.

The application...	How it does it	Why it is built that way
Records attendance with proof	A fingerprint or face check on the phone signs each check-in cryptographically, and an optional photo is attached to the record.	Attendance is the one thing a phone can do that a laptop cannot. The phone holds the biometric sensor and the secure keystore, so the record carries evidence rather than a claim.
Gives every person their own HRMS	Twelve modules are built natively for the phone — People, Tasks, Leaves, Payslips, Projects, Attendance, Reporting Manager, Assets, Policies, Letters, Calendar and Announcements.	These are the lists people actually open on a phone. Written natively they scroll properly, load instantly and lay out for a narrow screen.
Carries the whole portal with it	A Portal tab runs the full HRMS web application inside the app, already signed in.	Payroll runs, letter generation, reports and settings belong on a larger screen, but they must still be reachable from a phone. The Portal tab is that route.

1.2 Who uses it

The system recognises seven roles. Three of them — Founder, HR Admin and Employee — cover the great majority of day-to-day use, and this manual documents them as the three main modules the client asked for. The remaining four are specialist roles that sit between or beside them, and they are documented in Section 11.

Role	Internal name	In one line
Founder	founder	Full reach over every module in the company. The owner-level account.
Company Admin	company_admin	Owner-level reach inside one company. Treated identically to Founder everywhere in the system.
HR Admin	hr_admin	Manages people, attendance, leave, payroll and documents. Cannot edit the company profile.
Project Manager	project_manager	Runs projects and the tasks inside them. No reach over people, leave or pay.
Team Lead	team_lead	Manages tasks for their team. A narrower version of Project Manager.
Employee	employee	Self-service: their own attendance, leave, payslips, documents, tasks and messages.

Role	Internal name	In one line
Accounts Manager	accounts_manager	Payroll-only role. Verifies bank accounts and reads payout details; has none of HR's reach over people.

HOW THE THREE MAIN MODULES MAP TO THE SEVEN ROLES

Admin module (Section 10) = Founder and Company Admin. · HR module (Section 9) = HR Admin. · Employee module (Section 8) = Employee, and the baseline every other role also gets.

Project Manager, Team Lead and Accounts Manager are documented in Section 11 as additions to the Employee baseline.

1.3 System architecture

There is no separate mobile backend. The phone and the web portal talk to the same API, read the same database views and are governed by the same rules — which is why a change of permission takes effect on both at once, and why nothing in this manual has to be qualified with "on mobile".

Three properties of this design matter to anyone administering the system:

- **Permission is enforced in the database, not in the app.** — The screens hide what a role cannot use, but that is navigation only. If a control were ever shown by mistake, the database would still refuse the operation. There is no second copy of the rules to fall out of step.

- **Sensitive columns are withheld at the source.** — PAN, Aadhaar and bank details are not readable from the employee table at all. They are returned only by a dedicated function, and only to HR and to the employee themselves.
- **Biometrics never leave the phone.** — The fingerprint or face is checked by the operating system. What reaches the server is a signature the server can verify against a public key it holds — never the biometric itself, and never a simple yes/no the app could fake.

1.4 The five tabs

Everything in the mobile application is reached through five tabs along the bottom of the screen. They stay visible on every screen except the login screen and full-screen sheets.

Tab	Icon	What it is for	Documented in
Home	House	Today at a glance — attendance status, pending counts, quick actions and the latest announcement.	Screen 7.4
Check in	Fingerprint	The biometric attendance punch. The screen most people open every morning.	Screen 7.5
Modules	Grid	The twelve native modules, as a grid of coloured tiles.	Screen 7.7
Messages	Speech bubbles	One-to-one conversations with colleagues. Carries the unread count.	Screens 7.11 – 7.13
Portal	Globe	The full HRMS web portal, already signed in.	Screen 7.15

1.5 Device requirements

Requirement	Detail
Operating system	Android 8.0 or later; iOS 15 or later.
Screen lock	A screen lock (PIN, pattern or password) must be set on the phone. Without one the key cannot be stored securely and biometric check-in is not offered.
Biometric sensor	A fingerprint reader or face unlock, with at least one finger or face already enrolled in the phone's own settings.
Camera	Optional. Grants a photo attached to each punch. The app works without it and says so.
Network	The phone must be able to reach the HRMS server. Attendance, leave and every list require a live connection.
Permissions requested	Camera (attendance photo), Biometric / Fingerprint (check-in signature).

2 Design System — Colour, Typography & Sizing

This section documents the application's visual language: the exact colours it uses and what each one means, the type scale, and how both adapt to different phones. It is here for two reasons — so a reviewer can check a screenshot against the specification, and so any future screen added to the product can be built to match.

2.1 The brand colour

One colour carries the brand through the entire application: a deep forest green. It is used for every primary button, every active state, the user avatar, sent message bubbles and the selected tab. Nothing else in the interface uses it, which is what makes it read as "this is the thing to press".

Swatch	Token	Hex	Where it appears
	brand	#0F4C34	Primary buttons, active tab, avatar, sent message bubble, selected chip, section header button.
	success (accent)	#16A34A	The "checked in" status dot, approved and completed badges.
	danger	#B91C1C	Destructive actions — Remove this device, Reject, Delete — and the unread-count badge.
	warn	#B45309	Blocking notices, such as "Set a screen lock on your phone first".

Neutral palette

Everything that is not the brand colour is drawn from a single cool-grey ramp, so the interface stays quiet and the green stands out.

Swatch	Token	Hex	Used for
	bg	#F8FAFC	The page background behind every screen.
	card	#FFFFFF	Cards, list rows, input fields, sheets and the tab bar.
	border	#E2E8F0	Every hairline — card outlines, field outlines, row separators.
	text	#0F172A	Primary text: titles, values, row headings, typed input.
	muted	#64748B	Secondary text: subtitles, field labels, helper lines, timestamps.
	faint	#94A3B8	Placeholder text, inactive tab icons and labels, the "not clocked in" dot.

2.2 Status colours

Every badge in every list is coloured from one shared map, so a status means the same thing whichever module it appears in. Four tones cover every status in the system.

Tone	Background	Text	Statuses shown in this tone
Success	#DCFCE7	#166534	approved · completed · present · active · available
Warning	#FEF3C7	#92400E	pending · in progress · review · half day · on hold · late · maintenance · pinned · unassigned manager
Danger	#FEE2E2	#991B1B	rejected · absent
Neutral	#EEF2F7	#475569	assigned · on leave · planning · retired · and any status not otherwise mapped

WHY 'ASSIGNED' IS NEUTRAL RATHER THAN GREEN

An assigned task is simply not started; an assigned asset is out with someone and properly accounted for. The same word carries opposite feelings in the two modules, so it is given a colour that reads correctly for both. Any status the system gains in future and that is not yet mapped falls back to neutral — it shows a plain badge rather than borrowing a misleading colour.

2.3 Module tile colours

Each of the twelve native modules has its own tint. The tile icon is drawn in the tint and sits on a 10 %-opacity wash of the same colour, so the grid is scanned by colour and shape rather than read top to bottom.

Module	Swatch	Hex	Icon	Tap animation
People		#6366F1	people-outline	bob
Tasks		#0EA5E9	checkmark-done-outline	tick
Leaves		#F59E0B	airplane-outline	fly
Payslips		#16A34A	wallet-outline	open
Projects		#8B5CF6	folder-open-outline	open
Attendance		#0284C7	time-outline	sweep
Reporting Manager		#6366F1	git-network-outline	bob
Assets		#06B6D4	laptop-outline	lid
Policies		#64748B	document-text-outline	flip
Letters		#D97706	ribbon-outline	flip
Calendar		#F43F5E	calendar-outline	riffle
Announcements		#F97316	megaphone-outline	shout

Each tile plays a short movement when tapped, matched to what its icon depicts — the aeroplane flies, the clock's hands sweep, the laptop lid opens, the megaphone recoils. The list opens after the movement, not during it. If the phone has "Reduce motion" switched on in its accessibility settings, the animations are skipped entirely and the list opens immediately.

2.4 Typography

The application uses the operating system's own typeface — Roboto on Android, San Francisco on iOS — at the sizes below. Using the system font means text renders exactly as the rest of the phone does, and inherits the user's own font settings.

Role in the interface	Size	Weight	Colour	Example
Screen title	22 pt	700 Bold	text #0F172A	"Attendance", "Browse"
Sheet / bar title	18 pt	700 Bold	text #0F172A	"Messages", "Profile", "Generate letter"
Greeting / page heading	20 – 24 pt	700 Bold	text #0F172A	"Good morning", "Whhoohh Path"
Clock value (check-in / out)	19 – 20 pt	600 – 700	text #0F172A	"09:14"
Tile value	21 pt	700 Bold	text #0F172A	The number on a Home tile
Sheet title	17 pt	700 Bold	text #0F172A	"Apply for leave"
Primary button label	15 – 16 pt	600 – 700	white on brand	"Check in", "Sign in"
List row title	14 pt	600 Semibold	text #0F172A	An employee's name, a task title
Body / input text	14 – 15 pt	400 Regular	text #0F172A	Typed text, message bubbles
Row subtitle & metadata	12 pt	400 Regular	muted #64748B	An email under a name, "5 Sep–8 Sep"
Field label	11 – 13 pt	400 Regular	muted #64748B	"Employee code", "Department"
Section label	12 – 13 pt	600 – 700	muted #64748B	"Quick actions", "Latest announcement", "This device", "Letter type"
Tab label	10 pt	600 Semibold	brand when active, faint when not	"Home", "Check in"
Status badge	10 pt	700 Bold, capitalised	per status tone	"approved", "late"
Helper / caption	10 – 11 pt	400 Regular	muted #64748B	"Your face and fingerprint stay on this phone."

How the app adapts to different phones and font settings

Two separate things change how large text looks on a phone, and the application handles them separately.

Situation	What the app does	Effect
A small or a large phone	Every size is computed against a 375-point reference width and clamped between 320 and 480 points.	The layout keeps its proportions on a 5-inch phone and does not simply inflate on a tablet or foldable — past 480 points the layout is given room to breathe instead.
The user has enlarged system text	Text still scales with the user's accessibility setting, but the multiplier is capped at 1.25×	Someone's accessibility choice still does something, while a two-line button label cannot become four lines and push the buttons below the fold.
The user has switched on Reduce Motion	Tile animations are skipped and the module list opens immediately.	No movement anywhere in the module grid.

2.5 Layout, shape and spacing

Property	Value	Applies to
Screen padding	16 – 20 pt	The outer margin on every screen.
Card corner radius	12 – 14 pt	Cards, sheets, camera preview.
Row / input corner radius	10 pt	List rows, text fields, buttons.
Module tile radius	15 pt on a 54 × 54 pt tile	The twelve module tiles.
Chip radius	20 pt	Leave-type chips and letter-type chips.
Pill radius	Fully rounded	The role pill on the Profile sheet.
Badge radius	6 pt	Status badges in list rows.
Avatar	Circular, 40 pt on Home, 72 pt on Profile	The user's initials on a brand-green circle.
Minimum tap target	44 – 48 pt high	Every button and every tappable row, per platform guidance.
Card border	1 pt, #E2E8F0	Every card and input.
Module grid	Four tiles across, 22 % width each	The Modules tab.
Message bubble	Max 80 % of screen width, 16 pt radius with one squared corner	Messages.

2.6 This document's own formatting

For consistency with the product, this manual uses the same brand green and a matching type scale. The values below are recorded so that any page added to the document later can be made to match.

Element	Font	Size	Colour
Part title (Heading 1)	Segoe UI Semibold	20 pt	brand #0F4C34, with a 1.5 pt rule beneath

Element	Font	Size	Colour
Section heading (Heading 2)	Segoe UI Semibold	15 pt	brand #0F4C34, with a hairline beneath
Screen heading (Heading 3)	Segoe UI Semibold	12.5 pt	"SCREEN n ." in #16A34A, name in #0F4C34
Numbered sub-heading	Segoe UI Semibold	11 pt	number in #16A34A, text in #0A3524
Body text	Calibri	10.5 pt	#0F172A, 1.1 line spacing
Table heading row	Segoe UI	8.5 pt Bold	White on brand #0F4C34
Table body	Calibri	8.5 pt	#0F172A on alternating white / #F3F8F5 rows
Screenshot placeholder	Segoe UI Semibold	10.5 pt	brand #0F4C34 on #E8F1ED, dashed brand border
Callout box	Calibri	9.5 pt	Tinted panel with a 3 pt coloured left edge
Header / footer	Segoe UI / Calibri	8 pt	#16704C and #94A3B8

3 Complete Icon Guide

Every icon that appears anywhere in the mobile application, what it means, and where it is found. Icons in the native app are drawn from the Ionicons set; icons inside the in-app portal are drawn from the Lucide set. Both are line icons of a single weight, so they read as one family.

3.1 Navigation icons — the bottom tab bar

The active tab is drawn in the filled variant of its icon and tinted brand green; inactive tabs use the outline variant in faint grey. The shape changes as well as the colour, so the active tab is still obvious to anyone who cannot distinguish the two colours.

Icon name	Appearance	Label	Meaning
home-outline / home	A house	Home	The landing screen. Today's status and the quick actions.
finger-print-outline / finger-print	A fingerprint	Check in	The biometric attendance punch.
grid-outline / grid	Four squares	Modules	The grid of twelve native modules.
chatbubble-ellipses-outline	A speech bubble with dots	Messages	One-to-one conversations. Carries a red unread badge on its top-right corner.
globe-outline / globe	A globe	Portal	The full HRMS web portal inside the app.

3.2 Module tile icons

Icon name	Appearance	Module	What the module holds
people-outline	Two figures	People	The company directory — name, email, designation, department.
checkmark-done-outline	A double tick	Tasks	Every task you can see, with its project, assignee, due date and status.
airplane-outline	An aeroplane	Leaves	Leave requests, and the Apply button.
wallet-outline	A wallet	Payslips	Monthly payslips with gross and net pay.
folder-open-outline	An open folder	Projects	Projects with progress, priority, deadline and member count.
time-outline	A clock	Attendance	Your own attendance history, day by day.
git-network-outline	A branching tree	Reporting Manager	Who reports to whom across the company. HR and Founder only.
laptop-outline	A laptop	Assets	Company assets, their serial numbers and who holds them.
document-text-outline	A page of text	Policies	Published HR policies, with version numbers.

Icon name	Appearance	Module	What the module holds
ribbon-outline	A rosette	Letters	Offer, appointment, experience, relieving and employment-certificate letters. Everyone sees their own; HR sees the whole issue log and can generate new ones.
calendar-outline	A calendar page	Calendar	Company events, meetings and holidays.
megaphone-outline	A megaphone	Announcements	Company announcements, newest first, pinned ones flagged.

3.3 Action icons

Icon	Appearance	Where it appears	What it does
eye-outline / eye-off-outline	An eye, or an eye struck through	Login screen, password fields	Reveals or hides the typed password. Present as a diagnostic: a masked field looks identical whether or not the keyboard capitalised the first letter.
finger-print	A fingerprint	Home check-in card, Profile device row	On Home, the label on the check-in button. On Profile, green when this phone is set up for you and grey when it is not.
close	A cross	Profile sheet, Messages contact picker	Closes the sheet, or cancels the act of choosing someone to message.
chevron-back	A left chevron	Message conversation header	Returns to the conversation list.
create-outline	A pencil on a square	Messages header	Starts a new conversation — opens the list of colleagues.
send	A paper plane	Message composer	Sends the typed message. Greyed until something is typed.
log-out-outline	An arrow leaving a door	Profile sheet	Signs out of the application.
◀ Back	A text link, not an icon	Any module list	Returns from an open module to the module grid.
▼ / ▾	A pull-down gesture	Every list and the Home screen	Pull down from the top of any list to refresh it.

3.4 Status indicators

Indicator	Appearance	Meaning
Green dot	A small filled circle beside the attendance state on Home	You are checked in and have not yet checked out.

Indicator	Appearance	Meaning
Grey dot	The same circle in faint grey	You are not clocked in, or you have already checked out for the day.
Red badge on the Messages tab	A red circle with a number, or "9+"	Unread messages. The number is the total across every conversation.
Blue badge on a conversation row	A brand-green pill with a number	Unread messages from that one person.
". read" under a sent message	Small text inside your own bubble	The recipient has opened the conversation.
Status badge in a list row	A small coloured pill	The row's state. See Section 2.2 for the colour meanings and Appendix A for every value.
Spinner	A rotating arc in brand green	The screen is loading, or an action is in progress. Buttons show it in place of their label.

3.5 Portal icons — the in-app web portal

The Portal tab has its own navigation, with an animated icon for each module. Each icon plays a movement matched to what it depicts when its row is clicked.

Module	Icon	Colour	Movement on click	Who sees it
Dashboard	Four orbiting squares	#5A9AA8	The tiles walk the grid	Everyone
Employees	Two figures	#818CF8	The pair bob in turn	Everyone (columns reduced for non-managers)
Attendance	A clock	#38BDF8	The hands sweep round	Everyone
Leaves	A block and a clock	#FBBF24	The block rocks, the clock runs on	Everyone
Projects	A board of cards	#A78BFA	Cards dealt onto the board	Everyone
Tasks	Ticks	#34D399	The ticks draw themselves on	Everyone
Payroll	A pay box	#22C55E	The lid opens, notes rise	Everyone (own payslips); run and structures for Founder / HR
Company Bank Details	A bank front	#0EA5E9	The pediment drops onto the columns	Founder, Company Admin, HR Admin, Accounts Manager
Assets	A laptop	#22D3EE	The lid hinges open	Everyone (own assets); full inventory for Founder / HR
Recruitment	A figure with a plus	#F472B6	The plus springs in, the figure nods	Founder, Company Admin, HR Admin

Module	Icon	Colour	Movement on click	Who sees it
Documents	A page	#60A5FA	The corner lifts, the text writes in	Everyone (own letters); policies and generation for Founder / HR
Calendar	Stacked pages	#FB7185	The sheets riffle	Everyone
Announcements	A megaphone	#FB923C	The horn recoils, rings leave the mouth	Everyone (posting for Founder / HR)
Messages	Two bubbles	#2DD4BF	One bubble speaks, the other answers	Everyone
Reports	Bars	#C084FC	The bars grow out of the floor	Founder, Company Admin, HR Admin
Settings	A gear	#94A3B8	The gear turns	Founder, Company Admin, HR Admin

Portal control icons

Icon	Where	What it does
Menu (three lines)	Top bar, mobile width	Opens the navigation drawer.
Search (magnifier)	Top bar	Searches employees. Enter goes to the Employees list filtered by what was typed.
Sun / Moon	Top bar	Switches between light and dark appearance.
Bell	Top bar	Notifications. Currently shows "You're all caught up."
Avatar	Top bar, far right	Opens the account menu — Profile and Logout.
Plus	Any list header	Creates a new record of that kind — employee, project, task, asset, policy, event, announcement.
Pencil	Any list row	Edits that record.
Trash	Any list row	Deletes that record, after a confirmation prompt.
Eye / Eye-off	Payroll, Documents, Company Bank	Views a payslip or letter; on Company Bank, reveals or masks the account number.
Download	Payslip, Letter, Reports, All Leaves	Downloads a PDF or a CSV file.
Printer	Reports	Opens the browser print dialogue for the current report.
Play	Payroll	Runs payroll for the selected month and year.
Upload	Company Bank Details	Uploads the company logo or the authorised signature image.
Badge-check	Company Bank Details	Marks a bank account as verified. Accounts Manager and Founder only.

Icon	Where	What it does
Shield-alert	Company Bank Details	Marks an account that has not yet been verified.
User-plus	Projects, Assets	Adds a member to a project, or assigns an asset to a person.
Undo (arrow)	Assets	Returns an assigned asset to the pool.
Check / Cross	Leaves → Approvals	Approves or rejects a pending leave request.
Life-buoy	Platform console	Marks a company with an open support session.
Log-in	Platform console	Opens a support session inside a client company.

4 User Roles, Permissions & Access Control

Every person who signs in holds exactly one role. That role decides which tabs, modules, tables, buttons and columns they see — and, more importantly, what the database will let them do regardless of what the screen shows. This section is the authoritative reference for both.

4.1 How access is decided

Three separate mechanisms work together. Understanding the difference between them explains why some things are hidden and others merely refuse.

Layer	What it does	What it does not do
The screen	Hides tiles, tabs, buttons and columns a role has no use for, so nobody is offered an action that will fail.	It does not grant anything. If a control were shown by mistake, the operation would still be refused.
Row-level security	Decides which rows come back from any read. An employee's leave list contains their own leave; HR's contains everyone's.	It does not decide which columns come back, and it does not authorise an action.
Rules in the database	Withholds sensitive columns entirely, and re-checks permission inside every function that writes or aggregates.	Nothing bypasses it — not the phone, not the portal, not a modified build of the app.

WHAT THIS MEANS IN PRACTICE

If an employee taps Approve on a leave request, the app does not stop them — the database does, and the refusal it sends back is shown on screen. The correct answer arrives from the correct place. Nothing in the app re-states the rules, so there is no second copy to drift out of step.

4.2 The seven roles at a glance

Role	Sees	Manages	Cannot
Founder	Everything in the company.	People, attendance, leave, payroll, documents, projects, tasks, assets, recruitment, reports, settings, company profile, bank accounts.	Nothing is withheld inside their own company.
Company Admin	Everything in the company.	Identical to Founder — the database groups the two together in every rule.	Nothing is withheld inside their own company.
HR Admin	Everyone's records.	People, attendance, leave approvals, payroll runs, salary structures, documents and letters, assets, recruitment, reports, departments and designations.	Cannot edit the company profile. Cannot verify a bank account.
Project Manager	The directory, all projects and all tasks.	Projects, project membership and every task, including re-scoping and reassignment.	No reach over people records, leave decisions, payroll, documents, reports or settings.
Team Lead	The directory, all projects and all tasks.	Tasks — creation, deletion, priority, assignment and checklists. Calendar events.	Cannot create or edit projects. No reach over people, leave, payroll or reports.
Employee	Their own attendance, leave, payslips, letters, assets and tasks; the company directory, projects, policies, calendar and announcements.	Their own leave applications, their own task progress, their own password and their own device enrolment.	Cannot see another person's attendance, pay, letters, PAN, Aadhaar or bank details.
Accounts Manager	Payroll and company bank details.	Verifies a company bank account and reads payout details.	Deliberately has none of HR's reach over people, leave or documents.

4.3 Permission matrix — mobile modules

The twelve native module tiles, by role. A tile marked "—" is not shown to that role at all.

Module tile	Founder	Co. Admin	HR Admin	PM	Team Lead	Employee	Accounts
People	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Tasks	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Leaves — view	Yes	Yes	Yes	Own only	Own only	Own only	Own only
Leaves — apply	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Leaves — decision accepted *	Yes	Yes	Yes	—	—	—	—

Module tile	Founder	Co. Admin	HR Admin	PM	Team Lead	Employee	Accounts
Payslips	Yes	Yes	Yes	Own only	Own only	Own only	Yes
Projects	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Attendance (own history)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Reporting Manager	Yes	Yes	Yes	—	—	—	—
Assets	Yes	Yes	Yes	View	View	View	View
Policies	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Letters — own	Yes	Yes	Yes	Own only	Own only	Own only	Own only
Letters — whole issue log	Yes	Yes	Yes	—	—	—	—
Letters — Generate button	Yes	Yes	Yes	—	—	—	—
Calendar	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Announcements	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Messages	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Biometric check-in	Yes	Yes	Yes	Yes	Yes	Yes	Yes

* The Approve and Reject buttons on a pending leave row are offered to every role — the app does not hide them. What the table records is whose decision the database will actually accept: only the Founder, the Company Admin and the HR Admin. Anyone else who taps Approve gets the database's refusal, shown as "Not done" with its reason. This is deliberate: the rules live in one place, and the app does not keep a second copy of them to drift out of step.

"Own only" means the tile is shown and works, but returns only that person's own rows. The Attendance module is scoped to the signed-in person for every role, including HR — otherwise HR would open "Attendance" and be shown a hundred and twenty rows of everybody's punches, formatted exactly like their own and with no name to tell them apart.

4.4 Permission matrix — portal modules

Portal module	Founder	Co. Admin	HR Admin	PM	Team Lead	Employee	Accounts
Dashboard (organisation view)	Yes	Yes	Yes	Yes	Yes	—	Yes
Dashboard (personal view)	—	—	—	—	—	Yes	—

Portal module	Founder	Co. Admin	HR Admin	PM	Team Lead	Employee	Accounts
Employees — full list & actions	Yes	Yes	Yes	View	View	View	View
Employees — add / edit / delete	Yes	Yes	Yes	—	—	—	—
Employees — PAN, Aadhaar, bank	Yes	Yes	Yes	—	—	Own only	—
Attendance — Team tab	Yes	Yes	Yes	—	—	—	—
Leaves — Approvals tab	Yes	Yes	Yes	—	—	—	—
Leaves — All Leaves register & CSV	Yes	Yes	Yes	—	—	—	—
Projects — create / edit / members	Yes	Yes	Yes	Yes	—	—	—
Tasks — create / delete / reassign	Yes	Yes	Yes	Yes	Yes	—	—
Tasks — own progress	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Payroll — my payslips	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Payroll — run & salary structures	Yes	Yes	Yes	—	—	—	—
Company Bank — view & edit	Yes	Yes	Yes	—	—	—	View
Company Bank — verify	Yes	Yes	—	—	—	—	Yes
Assets — full inventory & assign	Yes	Yes	Yes	—	—	—	—
Recruitment	Yes	Yes	Yes	—	—	—	—
Documents — policies (create/edit)	Yes	Yes	Yes	—	—	—	—
Documents — generate letters	Yes	Yes	Yes	—	—	—	—
Documents — my letters	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Calendar — create events	Yes	Yes	Yes	Yes	Yes	—	—
Announcements — post / pin	Yes	Yes	Yes	—	—	—	—
Reports (all seven)	Yes	Yes	Yes	—	—	—	—

Portal module	Founder	Co. Admin	HR Admin	PM	Team Lead	Employee	Accounts
Settings — departments, designations	Yes	Yes	Yes	—	—	—	—
Settings — company profile	Yes	Yes	—	—	—	—	—
Settings — email / SMTP, audit log	Yes	Yes	Yes	—	—	—	—

4.5 Data visibility rules

Data	Who can read it	Enforced by
Attendance records	The employee themselves; HR Admin, Founder and Company Admin for everyone.	Row-level security on the attendance table.
Leave requests	The employee themselves; HR Admin, Founder and Company Admin for everyone.	Row-level security, plus <code>decide_leave_request</code> re-checking who may decide.
Payslips	The employee themselves; HR Admin, Founder and Company Admin for everyone.	Row-level security, with the phone additionally filtering "My payslips" to the signed-in person.
Letters and certificates	The employee they were issued to; HR Admin, Founder and Company Admin for everyone.	Row-level security on the letters table.
PAN, Aadhaar, bank account	The employee themselves, and HR Admin / Founder / Company Admin.	Column grants withhold them from the employees table entirely; only <code>get_employee_detail()</code> returns them.
Messages	Only the two people in the conversation. Nobody else in the company, at any role.	Row-level security limits every row to messages the reader sent or received.
Company bank details	Founder, Company Admin, HR Admin and Accounts Manager. Never an employee.	Route guard plus a database re-check: editing requires HR, verifying requires Accounts.
Reports	HR Admin, Founder and Company Admin.	Each report is a security-definer function that re-checks for an HR-level role before it reads a single row.

5 Getting Started

5.1 Installing the application

Step	Android	iOS
1	Receive the .apk file or the Play Store link from your administrator.	Receive the TestFlight invitation or the App Store link.
2	If installing from a file, allow installation from your file manager when prompted.	Install TestFlight if you have been sent an invitation, then accept it.
3	Open the installer and tap Install.	Tap Install (App Store) or Accept then Install (TestFlight).
4	Open the app. It shows the Whhoohh Path mark and the sign-in form.	Open the app. It shows the Whhoohh Path mark and the sign-in form.

BEFORE THE FIRST SIGN-IN

Set a screen lock on the phone — a PIN, pattern, password or Face ID. Without one, the app cannot store the check-in key securely and will not offer biometric check-in.

Enrol at least one fingerprint or a face in the phone's own settings. The app uses the phone's sensor; it does not enrol biometrics of its own.

5.2 Your first sign-in

1. Open the app. The sign-in screen appears with the Whhoohh Path mark and the line "Sign in to record your attendance".
2. Type the email address your HR administrator created for you.
3. Type your password. Tap the eye icon at the right of the field to check what you have typed — worth doing on the first sign-in, because a masked field looks identical whether or not the keyboard capitalised the first letter.
4. Tap Sign in.
5. The app opens on Home. Your session is stored securely on the phone, so you will not be asked to sign in again each morning.
6. Go to the Check in tab and tap Set up biometric check-in. Confirm with your fingerprint or face when the phone asks. This is a one-time step per person, per phone.

CHANGE YOUR PASSWORD BEFORE THE SYSTEM HOLDS ANYTHING REAL

Accounts created from the seed data ship with known bootstrap passwords. Every one of them should be changed from Portal → Profile → Change password before the system is used in earnest.

5.3 Signing out and switching accounts

To do this	Go here
Sign out	Tap your avatar on Home to open Profile, then tap Sign out. You can also tap Sign out in the header of the Check in tab.
Hand the phone to a colleague	Sign out, then open Profile → This device → Remove this device. Their own "Set up" will then be offered when they sign in.
Use two accounts on one phone	Each person's check-in key is stored in its own slot, keyed to their account. Two people can both be set up on the same handset, each unlocked by their own biometric.
Change your password	Portal tab → Profile → Change password. The mobile app itself does not carry a password form.

6 Navigation Map & Module Structure

This section shows the whole application at once — first as a structure, then as the three main role journeys, each with its own block diagram and workflow.

6.1 The complete navigation tree

Level 1 — Tab	Level 2 — Screen	Level 3 — Sheet or sub-screen	Section
Login	Sign-in form	—	7.2
Home	Home dashboard	Profile sheet (via the avatar)	7.4 · 7.14
		Routes to: Check in · Leaves · Tasks · Attendance · Payslips · Modules	
Check in	Attendance / punch screen	Biometric setup · camera permission prompt	7.5 · 7.6
Modules	Module grid (11 tiles)	—	7.7
	People	—	8.1
	Tasks	Row action sheet — Move to next stage	8.2
	Leaves	Apply for leave sheet · Approve / Reject note sheet	8.3 · 8.4 · 9.1
	Payslips	—	8.5
	Projects	—	8.6
	Attendance	—	8.7
	Reporting Manager	—	9.2
	Assets	—	8.8
	Policies	—	8.9
	Letters	Letter view · Generate letter form (HR and above)	8.12 · 9.19
	Calendar	—	8.10
	Announcements	—	8.11
Messages	Conversation list	Contact picker · Conversation view	7.11 – 7.13
Portal	The full HRMS web portal	16 portal modules — see Sections 8 – 12	7.15

START · Founder or Company Admin signs in

7 Common Screens — Every Role

The screens in this section are identical for every one of the seven roles. What differs is only the data they return: the same Home screen shows an employee their own pending leave and shows HR the whole company's, because the rules behind the query decide what comes back, not the screen.

Screens that a particular role adds on top of this set are documented in Sections 8 to 12.

READING THIS SECTION

Every screen below follows the eight-part format described in Document Control. If a screen behaves differently for one role, that difference is called out in a shaded box within the screen's own entry rather than in a separate chapter.

SCREEN 7.1 · SPLASH & SESSION RESTORE

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - SPLASH SCREEN]

Insert SPLASH SCREEN screenshot here.

1. Purpose

The moment between tapping the app icon and seeing a screen you can use. The app checks whether a valid session is already stored on the phone and decides where to send you.

2. UI Components

UI element	What it shows
Brand mark	The Whhoohh Path logo, centred on the light background (#F8FAFC).
Loading indicator	A large brand-green spinner in the centre of the screen while the stored session is checked.
Status bar	The phone's own clock and battery, in dark text on the light background.

3. Icons & Buttons

This screen carries no icons or buttons of its own — it is presentation only.

4. How to Use

1. Tap the Whhoohh Path HRMS icon on your phone's home screen.
2. Wait while the spinner runs — normally under a second.
3. If you have signed in before on this phone, the app opens straight on Home. If not, the sign-in screen appears.

5. User Actions

Action	Where / how
Open the app	Tap the app icon. There is nothing to tap on this screen itself.

6. Expected Result

After this action	The application does this
A valid session is found	The app opens on Home, already signed in. You are not asked for a password.
No session, or the session has expired	The sign-in screen is shown.
The server cannot be reached	The app falls back to the sign-in screen rather than hanging on the spinner.

7. Block Diagram

8. Workflow

SCREEN 7.2 · LOGIN SCREEN

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - LOGIN SCREEN]

Insert LOGIN SCREEN screenshot here.

1. Purpose

The single entry point to the application. Everyone — Founder, HR Admin, Employee and every other role — signs in through this one screen. There is no separate admin login and no role selector: the role is attached to the account, and the app arranges itself around it after sign-in.

2. UI Components

UI element	What it shows
Brand block	The animated Whhoooh Path mark at 104 points, the title "Whhoooh Path" (24 pt bold) and the line "Sign in to record your attendance" (13 pt, muted).
Email field	A white rounded field with the placeholder "Email". Set to the email keyboard, with autocorrect and automatic capitalisation off. The keyboard's Next key moves focus to the password.
Password field	The same field style with the placeholder "Password", masked by default. Autocorrect, spell-check and automatic capitalisation are all off. The keyboard's Go key submits the form.
Reveal control	An eye icon inside the right edge of the password field.
Error line	Red text (#B91C1C) directly above the button when a sign-in fails.
Sign in button	A full-width brand-green button, at least 48 points high. Dimmed while either field is empty or while the request is in flight.

3. Icons & Buttons

Icon / control	Label	What it does
eye-outline	Show password	Reveals what you have typed.
eye-off-outline	Hide password	Masks the password again.
Spinner	(replaces the button label)	The sign-in request is in progress. The button is not tappable while it runs.

4. How to Use

1. Type the email address your HR administrator created for you. Use the exact address — it is not case-sensitive, but a typo will be rejected.
2. Tap Next on the keyboard, or tap the password field.

3. Type your password.
4. If the sign-in has already failed once, tap the eye icon and check what has actually been typed before trying again.
5. Tap Sign in, or press Go on the keyboard.
6. Wait for the spinner. On success the app opens on Home.

5. User Actions

Action	Where / how
Enter an email address	The email field.
Enter a password	The password field.
Reveal or hide the password	The eye icon inside the password field.
Submit	The Sign in button, or the Go key on the keyboard.

6. Expected Result

After this action	The application does this
The credentials are correct	A session token is stored securely on the phone and the app opens on Home. You will not be asked to sign in again on this phone until you sign out.
The email or password is wrong	The red line reads "Invalid email or password" and the fields keep what you typed.
No account exists for that email	The same message is shown. If nobody can sign in at all, the accounts have not been created yet — contact your administrator.
The account exists but is not active	The message reads "This account is not active". The login exists but the employee record behind it has been deactivated.
The server cannot be reached	The red line reports the connection problem. Check the phone's network.

WHY THE REVEAL CONTROL MATTERS

A masked field shows dots whether or not the keyboard capitalised the first character, so a password mangled on the way in looks identical to a correct one — and the only feedback is "Invalid email or password". Being able to see what was actually typed is what makes that visible.

7. Block Diagram

8. Workflow

SCREEN 7.3 · APP SHELL & BOTTOM TAB BAR

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - BOTTOM TAB BAR]

Insert a screenshot showing the tab bar, ideally with an unread badge on Messages.

1. Purpose

The frame that holds every screen after sign-in. Five tabs run along the bottom of the display and never move, so any part of the application is one tap away from any other part.

2. UI Components

UI element	What it shows
Tab bar	A white bar across the bottom with a hairline top border, sitting above the phone's gesture area.
Five tabs	Home, Check in, Modules, Messages and Portal, evenly spaced, each with an icon above a 10 pt label.
Active state	The active tab's icon switches to its filled variant and both icon and label turn brand green. Inactive tabs use the outline icon in faint grey.
Unread badge	A red circle on the top-right corner of the Messages icon, showing the number of unread messages, or "9+" beyond nine.
Content area	Everything above the tab bar. All five tabs stay loaded in the background, so switching between them is instant and nothing loses its place.

3. Icons & Buttons

Icon / control	Label	What it does
home-outline / home	Home	Opens the Home dashboard.
finger-print-outline / finger-print	Check in	Opens the biometric attendance screen.
grid-outline / grid	Modules	Opens the grid of twelve native modules.
chatbubble-ellipses-outline	Messages	Opens the conversation list. Carries the unread badge.
globe-outline / globe	Portal	Opens the full HRMS web portal inside the app.

4. How to Use

1. Tap any of the five icons to move to that tab.
2. The tab you leave keeps its scroll position and its state — return to it and it is exactly as you left it.

3. Watch the Messages tab: a red badge means somebody has written to you.

5. User Actions

Action	Where / how
Switch tab	Tap any of the five tabs.
See how many messages are waiting	Read the red badge on the Messages icon.

6. Expected Result

After this action	The application does this
A tab is tapped	Its content appears immediately. Nothing reloads, because every tab stays mounted.
A message arrives	The badge on the Messages tab appears or its number increases, within fifteen seconds.
A conversation is opened	Its messages are marked read and the badge count drops accordingly.

WHY THE ICON CHANGES SHAPE AND NOT JUST COLOUR

The active tab uses the filled variant of its icon rather than only a colour change. A colour change alone is easy to miss, and is invisible to anyone who cannot distinguish the two colours.

7. Block Diagram

8. Workflow

The chosen tab is shown; the previous one is hidden, not unloaded

Because nothing unloads, the portal keeps its page and its scroll position, and the message poll keeps running in the background.

END · The new tab is on screen with its state intact

SCREEN 7.4 · HOME DASHBOARD

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - HOME DASHBOARD]

Insert HOME DASHBOARD screenshot here.

1. Purpose

The landing screen. It answers two questions before any navigating: am I clocked in, and what needs me?

Everything on Home is a shortcut to somewhere else rather than a place to work — which is why a tap on "Payslips" lands on payslips rather than on the module grid with payslips somewhere in it.

2. UI Components

UI element	What it shows
Greeting	"Good morning", "Good afternoon" or "Good evening" at 20 pt bold, chosen from the time of day, with your email address beneath it in muted 12 pt.
Avatar	A 40-point brand-green circle at the top right showing the first two letters of your email. Tapping it opens your Profile.
Attendance card	A white card carrying a status dot and one of "Not clocked in", "Checked in" or "Checked out"; the In and Out times side by side at 19 pt; and a full-width green button reading Check in, Check out or View attendance depending on where you are in the day.
Two count tiles	"Leaves pending" (amber calendar icon) and "Open tasks" (blue double-tick). Each shows a number, or an em dash if it could not be read.
Quick actions	Four round-cornered icon buttons under the label "Quick actions": Attendance, Leave, Payslips and More.
Latest announcement	The most recent company announcement — its title in bold and up to three lines of the body — under the label "Latest announcement".
Pull to refresh	Pull down anywhere on the screen to re-read everything.

3. Icons & Buttons

Icon / control	Label	What it does
Avatar circle	Your initials	Opens the Profile sheet.
Status dot	—	Green when you are checked in and have not checked out; faint grey otherwise.
finger-print	Check in / Check out / View attendance	Goes to the Check in tab.

Icon / control	Label	What it does
calendar-outline	Leaves pending	Opens the Leaves module.
checkmark-done-outline	Open tasks	Opens the Tasks module.
time-outline	Attendance	Opens your attendance history.
airplane-outline	Leave	Opens the Leaves module.
wallet-outline	Payslips	Opens the Payslips module.
grid-outline	More	Opens the module grid.

4. How to Use

1. Read the attendance card first — the dot and the words tell you where you stand today.
2. Tap the green button on that card to go and punch in or out.
3. Check the two tiles for anything waiting on you.
4. Use a quick action to jump straight to attendance, leave, payslips or the full module grid.
5. Read the latest announcement at the foot of the screen.
6. Pull down from the top to refresh everything.

5. User Actions

Action	Where / how
Open your profile	Tap the avatar at the top right.
Go to check-in	Tap the green button on the attendance card.
Open leaves or tasks	Tap either count tile.
Jump to a module	Tap one of the four quick actions.
Refresh	Pull down from the top of the screen.

6. Expected Result

After this action	The application does this
The screen opens	Today's attendance, the pending leave count, your open task count and the newest announcement are read at once. If one of them is slow or refused, the rest of the screen still fills in.
You have not punched yet	The dot is grey, both times show an em dash, and the button reads Check in.
You have checked in	The dot is green, the In time is filled, and the button reads Check out.
You have checked out	The dot is grey again, both times are filled, and the button reads View attendance.
A count cannot be read	That tile shows an em dash rather than a zero, so a failure is never mistaken for "nothing to do".

WHY THE COUNTS DIFFER BY ROLE

"Leaves pending" counts every pending request the signed-in person is allowed to see — for an employee that is their own, for HR it is the whole company's. "Open tasks" is always scoped to the signed-in person, so an HR admin's tile reports their own workload rather than the company's.

8. Workflow

SCREEN 7.5 · CHECK IN — BIOMETRIC ATTENDANCE

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - ATTENDANCE / CHECK-IN SCREEN]

Insert ATTENDANCE / CHECK-IN SCREEN screenshot here.

1. Purpose

The screen the application exists for. Today's status and the two buttons that change it, with a fingerprint or face check standing behind each one.

The order of operations matters: the challenge is fetched first, signing it raises the biometric prompt, and only a returned signature gets as far as the server. The photo is taken after the signature succeeds — a selfie of somebody who then failed the fingerprint check is not evidence of anything.

2. UI Components

UI element	What it shows
Header	The Whhoohh Path mark at 36 points, the title "Attendance" at 22 pt bold, your email beneath it on one line, and a Sign out link at the right.
Today card	A white card labelled "Today" with In and Out in equal halves, each showing a time at 20 pt or an em dash.
Camera preview	A square, front-facing live preview with rounded corners, shown once the camera permission has been granted. This is the photo that will be attached to the punch.
Camera prompt	If the camera has not been allowed, a pale grey panel reads "Allow the camera to attach a photo to each punch (optional)". Tapping it asks the phone for permission.
Check in button	A full-width brand-green button. Dimmed once you have checked in.
Check out button	A white button with a green outline. Dimmed until you have checked in, and again once you have checked out.
Privacy note	Centred grey text: "Your face and fingerprint stay on this phone. It signs the check-in; the server only ever sees the signature."
Blocking notice	If the phone is not capable, an amber panel replaces the buttons and says why.

3. Icons & Buttons

Icon / control	Label	What it does
Sign out	Sign out	Ends the session and returns to the sign-in screen. Your device key is kept, so signing back in does not mean setting the phone up again.

Icon / control	Label	What it does
Spinner	(replaces a button label)	The punch is in progress — the challenge, the signature, the photo and the write.

4. How to Use

1. Open the Check in tab.
2. Check the Today card — if In already shows a time, you have punched in.
3. Optionally allow the camera the first time, so a photo is attached to each punch.
4. Tap Check in. The phone raises its own fingerprint or face prompt.
5. Confirm with your fingerprint or face.
6. Wait a moment — the photo is taken, the record is written, and a confirmation appears reading "Checked in — Verified, photo saved".
7. At the end of the day, return to this tab and tap Check out. The same confirmation follows.

5. User Actions

Action	Where / how
Check in	The green button. Available once per day.
Check out	The outlined button. Available only after checking in.
Allow the camera	Tap the grey panel the first time.
Sign out	The link in the header.

6. Expected Result

After this action	The application does this
Check in succeeds	An alert reads "Checked in" with "Verified, photo saved" or "Verified". The Today card fills the In time and the Check in button is dimmed.
Check out succeeds	An alert reads "Checked out". The Out time is filled and both buttons are dimmed for the rest of the day.
The biometric prompt is dismissed	Nothing happens and nothing is recorded. A dismissed prompt is a decision, not an error, so no alarming message is shown.
The fingerprint or face is not recognised	An alert reads "Not recorded — Biometric check failed". Nothing is written.
The phone has no sensor	An amber panel reads "This device has no fingerprint or face sensor."
No fingerprint or face is enrolled on the phone	"Set up Face ID, Touch ID or a fingerprint in your phone's settings first."
The phone has no screen lock	"Set a screen lock on your phone first." The key cannot be stored safely without one.
The phone is not yet set up for you	A single button reads Set up biometric check-in — see Screen 7.6.

WHAT THE SERVER ACTUALLY RECEIVES

A signature it can verify against a public key it already holds, and — if you allowed the camera — a photograph. It never receives your fingerprint, your face, or a simple yes/no the app could have invented.

THE HONEST LIMIT

On a rooted or jailbroken phone the keystore's guarantees weaken, and a successfully extracted key would not announce itself. This is strong enough to stop a colleague punching in for an absent friend, which is the real risk; it is not a defence against the phone's owner attacking their own hardware.

7. Block Diagram

8. Workflow

SCREEN 7.6 · BIOMETRIC DEVICE SETUP

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - BIOMETRIC SETUP SCREEN]

Insert the Check in tab as it appears before setup, showing the "Set up biometric check-in" button.

1. Purpose

A one-time step, once per person per phone. It generates a key pair on the handset, locks the private half behind the phone's own biometric, and registers only the public half with the server.

2. UI Components

UI element	What it shows
Today card	The same card as the check-in screen, showing In and Out for today.
Set-up button	A single full-width brand-green button reading "Set up biometric check-in", shown in place of the Check in and Check out buttons.
Confirmation prompt	The phone's own dialogue, reading "Confirm it is you to set up check-in".
Result alert	"Ready — This phone can now check you in and out."

3. Icons & Buttons

Icon / control	Label	What it does
Spinner	(replaces the button label)	The key is being generated and registered.

4. How to Use

1. Make sure the phone has a screen lock and at least one fingerprint or face enrolled in its own settings.
2. Open the Check in tab.
3. Tap Set up biometric check-in.
4. Confirm with your fingerprint or face when the phone asks.
5. Wait for the alert reading "Ready". The Check in and Check out buttons now replace the set-up button.

5. User Actions

Action	Where / how
Set the phone up for your account	The single green button on the Check in tab.

6. Expected Result

After this action	The application does this
Setup succeeds	"Ready — This phone can now check you in and out." The screen switches to the normal check-in view.
Setup fails	"Setup failed" with the reason. Any half-written key is cleared, so the next attempt starts clean rather than signing with a key the server has never seen.
The phone has no screen lock	Setup is not offered; the amber blocking notice explains what to fix.
Two people share the phone	Each account gets its own key slot. Setting up a second account does not remove the first.

ONE KEY SLOT PER ACCOUNT, NOT PER PHONE

A demo handset or a shared device at a desk may carry several people's keys at once. Each is unlocked by its own biometric, and the server checks a punch against the signed-in person's own public key — so a mismatched key fails rather than punching for the wrong person.

7. Block Diagram

8. Workflow

SCREEN 7.7 · MODULES GRID (BROWSE)

Module	Mobile app	Available to
		Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager

[SCREENSHOT PLACEHOLDER - MODULES GRID SCREEN]

Insert MODULES GRID SCREEN screenshot here.

1. Purpose

The menu of the twelve native modules, as a grid of coloured tiles four across. A grid rather than a list, because twelve modules read top-to-bottom are a wall of text, while as tinted tiles they are found by colour and shape — which is how anyone who uses this daily will find them.

2. UI Components

UI element	What it shows
Heading	"Browse" at 22 pt bold, with the line "The sections that read well on a phone. The rest are in Portal." beneath it.
Tile grid	Eleven tiles, four across, each 54 × 54 points with a 15-point corner radius. The icon is drawn in the module's own tint on a 10 % wash of the same colour, with the module name beneath in 11 pt semibold.
Role filtering	A tile that the signed-in role has no use for is not shown at all. Reporting Manager, for example, appears only for Founder, Company Admin and HR Admin.

3. Icons & Buttons

Icon / control	Label	What it does
people-outline (indigo)	People	Opens the company directory.
checkmark-done-outline (sky)	Tasks	Opens the task list.
airplane-outline (amber)	Leaves	Opens leave requests, with the Apply button.
wallet-outline (green)	Payslips	Opens payslips.
folder-open-outline (violet)	Projects	Opens the project list.
time-outline (blue)	Attendance	Opens your own attendance history.
git-network-outline (indigo)	Reporting Manager	Opens the reporting structure. HR and Founder only.
laptop-outline (cyan)	Assets	Opens the asset register.
document-text-outline (slate)	Policies	Opens published HR policies.

Icon / control	Label	What it does
ribbon-outline (amber)	Letters	Opens the letters issued to you — and, for HR, the whole issue log with a Generate button.
calendar-outline (rose)	Calendar	Opens company events.
megaphone-outline (orange)	Announcements	Opens company announcements.

4. How to Use

1. Tap the Modules tab.
2. Find the module you want by its colour and icon.
3. Tap the tile. It plays a short movement matched to its icon, then the list opens.
4. Tap < Back at the top left of the list to return to this grid.

5. User Actions

Action	Where / how
Open a module	Tap its tile.
Return from a module	Tap < Back in the module's header.

6. Expected Result

After this action	The application does this
A tile is tapped	The icon plays its movement — the aeroplane flies, the clock's hands sweep, the laptop lid opens — and the module's list opens a fraction of a second later.
Reduce Motion is on in the phone's settings	The animation is skipped and the list opens immediately.
A module is not available to your role	Its tile is not shown. There is no greyed-out tile to tap.

7. Block Diagram

8. Workflow

SCREEN 7.8 · MODULE LIST — THE SHARED PATTERN

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - MODULE LIST SCREEN]

Insert any module list — People or Leaves is a good example.

1. Purpose

Every one of the twelve modules opens into the same list screen. One implementation drives all of them, configured per module, so the header, the search box, the row layout, the empty state, the error state and pull-to-refresh behave identically everywhere.

Read this screen once and you have read all twelve. Sections 8 to 12 then describe only what is particular to each module: what a row contains, and what it can be made to do.

2. UI Components

UI element	What it shows
Header	A < Back link at the left, the module name at 22 pt bold, and — on modules that have one — a green action button pushed to the far right ("Apply" on Leaves).
Search box	A white field reading "Search {module name}". It filters what is already on screen, so results appear as you type with no waiting.
List rows	White cards with a hairline border. Each row is flattened to four slots: a title, a quieter subtitle beneath, a short value on the right, and a coloured status badge.
Status badge	A small capitalised pill coloured by the row's state — see Section 2.2.
Empty state	Centred grey text specific to the module, such as "No leave requests." or "No colleagues listed yet."
No-match state	When a search matches nothing: "Nothing matching "{what you typed}"".
Error state	If the list could not be read, the reason from the server is shown in place of the rows.
Pull to refresh	Pull down from the top of the list to re-read it.

3. Icons & Buttons

Icon / control	Label	What it does
< Back	Back	Returns to the module grid.
Green header button	Apply (Leaves only)	Opens the Apply for leave sheet.
Spinner	—	Shown centred while the list is first read.

Icon / control	Label	What it does
Row tap	—	On modules whose rows can be acted on, a tap opens the action sheet. On the others a row is a record and a tap does nothing.

4. How to Use

1. Open a module from the grid.
2. Wait for the list. Rows appear newest-first or alphabetically, depending on the module.
3. Type in the search box to narrow the list. Search matches everything you can see in a row — title, subtitle, value and badge.
4. Tap a row where an action is offered, and choose from the sheet that appears.
5. Pull down to refresh.
6. Tap ‹ Back to return to the grid.

5. User Actions

Action	Where / how
Search within the module	The search field under the header.
Act on a row	Tap the row — where actions exist.
Refresh	Pull down from the top.
Use the module's own action	The green button in the header, on the modules that have one.
Go back	‹ Back at the top left.

6. Expected Result

After this action	The application does this
The module opens	A spinner, then the rows. Row counts are capped per module — 200 for People, 120 for Attendance, 100 for most others.
A search is typed	The list narrows immediately. Nothing is re-requested from the server.
Nothing matches	"Nothing matching "{text}"." is shown in place of the rows.
The module is empty	The module's own empty line is shown, which says what belongs there.
The list cannot be read	The reason from the server is shown as-is rather than replaced with a guess.
An action is run	The whole list is re-read afterwards rather than patched in place, so what you see cannot disagree with what the database now holds.

WHY A ROW HAS ONLY FOUR SLOTS

A phone has room for a line, a quieter line beneath it, something short on the right, and a status. Beyond that a list stops being scannable, whatever the table behind it holds.

7. Block Diagram

8. Workflow

SCREEN 7.9 · ROW ACTION SHEET

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - ROW ACTION SHEET]

Insert the sheet that appears when a pending leave row or a task row is tapped.

1. Purpose

The list of things a particular row can be made to do. It uses the phone's own action sheet rather than a custom control, so it reads correctly at any font size and behaves the way every other app on the handset does.

2. UI Components

UI element	What it shows
Title	The row's own title — the task name, the leave type — so it is unambiguous which record is about to change.
Action buttons	One per available action. Destructive actions such as Reject are drawn in red.
Cancel	Always present, and always the way out.

3. Icons & Buttons

Icon / control	Label	What it does
Move to {stage}	Tasks	Advances the task one step: assigned → in progress → review → completed.
Approve	Leaves (pending rows)	Opens the note sheet, then approves.
Reject	Leaves (pending rows), red	Opens the note sheet, then rejects. A reason of at least ten characters is required.
Cancel	Everywhere	Closes the sheet without doing anything.

4. How to Use

1. Tap a row that offers actions — a task that is not yet completed, or a leave request still pending.
2. Read the title at the top of the sheet and confirm it is the record you meant.
3. Tap the action you want.
4. If the action needs a written note, a second sheet opens for it.
5. The list re-reads itself and the row's badge changes.

5. User Actions

Action	Where / how
Advance a task	Tap the task row, then Move to {next stage}.
Approve or reject leave	Tap the pending row, then Approve or Reject.
Back out	Cancel, or tap outside the sheet.

6. Expected Result

After this action	The application does this
An action succeeds	The sheet closes and the list is re-read. The row's badge shows its new state.
An action is refused	An alert reads "Not done" followed by the exact reason from the database — for example that you are not permitted to decide this request, or that the leave balance is exhausted.
A task is moved to completed	Its progress is set to 100 % at the same time, so a task marked done never reads 35 % complete.
A row has no actions	Tapping it does nothing. A record that is not a decision is not made to look like one.

WHY THE APP OFFERS AN ACTION IT MAY NOT BE ALLOWED TO RUN

Offering an action is a guess that it will be permitted; the database is what actually decides. An employee tapping Approve on their own request gets the database's refusal — which is the correct answer, arriving from the correct place. Nothing is re-checked in the app, so there is no second copy of the rules to drift out of step.

7. Block Diagram

8. Workflow

SCREEN 7.10 · NOTE SHEET — APPROVE OR REJECT

Module	Mobile app	Available to	Offered to every role; only a Founder, Company Admin or HR Admin decision is accepted
--------	------------	--------------	---

[SCREENSHOT PLACEHOLDER - APPROVE / REJECT NOTE SHEET]

Insert APPROVE / REJECT NOTE SHEET screenshot here.

1. Purpose

Collects the written note that goes with a leave decision. It is built into the app rather than borrowed from the phone, because the platform's own text prompt exists on iOS only — on Android it silently does nothing, which would have meant rejections going out with no reason at all on exactly the platform this app ships on.

2. UI Components

UI element	What it shows
Title	"Approve leave" for an approval, or "Why are you rejecting this?" for a rejection.
Text area	A multi-line field about four lines tall, capped at 500 characters, focused as soon as the sheet opens. Its placeholder reads "Note (optional)" on an approval and "They will read this" on a rejection.
Cancel	An outlined button that closes the sheet without deciding anything.
Send	A brand-green button. On a rejection it stays dimmed until at least ten characters have been typed.
Backdrop	The screen behind is dimmed to a dark translucent overlay.

3. Icons & Buttons

Icon / control	Label	What it does
Cancel	Cancel	Closes the sheet. Nothing is decided.
Send	Send	Submits the decision together with the note.
Spinner	(replaces Send)	The decision is being written.

4. How to Use

1. Choose Approve or Reject from the row action sheet.
2. Type the note. On an approval it is optional — a word of context such as "cover arranged with Priya" is useful. On a rejection it is required and must be at least ten characters.
3. Tap Send.
4. The sheet closes and the leave list re-reads. The row's badge changes to approved or rejected.

5. User Actions

Action	Where / how
Write a note	The text area.
Submit the decision	Send.
Abandon the decision	Cancel.

6. Expected Result

After this action	The application does this
An approval is sent	The request is approved, the note is attached, and the employee sees it on their own request.
A rejection is sent	The request is rejected with the reason. On the employee's Leaves list the note replaces the dates in the row's subtitle, because the reason is what they opened the list to read.
Fewer than ten characters on a rejection	Send stays dimmed. A refusal that explains itself is the whole point of the field.
The decision is refused	"Not done" with the database's reason — most often that the caller is not permitted to decide this request.

WHY AN EMPLOYEE IS SHOWN THESE BUTTONS AT ALL

The app offers Approve and Reject on any pending row without checking the role first, so an employee will see them on their own request. That is deliberate rather than an oversight: whether a caller may decide is `decide_leave_request`'s business, and its refusal comes back as "Not done" with the reason. Nothing is re-checked in the app, so there is no second copy of the rules to drift out of step — see Section 4.1.

7. Block Diagram

8. Workflow

SCREEN 7.11 · MESSAGES — CONVERSATION LIST

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - MESSAGES / INBOX SCREEN]

Insert MESSAGES / INBOX SCREEN screenshot here.

1. Purpose

The inbox: one row per person you have exchanged messages with, most recently active first. A conversation is private to the two people in it — nobody else in the company, at any role, can read it.

2. UI Components

UI element	What it shows
Header	"Messages" at 18 pt bold, with a compose icon at the right.
Conversation rows	Each row carries a brand-green circle with the person's initials, their name, the time of the last message (a clock time for today, a date for anything older), a one-line preview of that message, and — when there are unread messages from them — a green pill with the count.
Empty state	"No conversations yet. Tap the pencil to start one."
Pull to refresh	Pull down to re-read the list.
Background polling	The list refreshes itself every fifteen seconds while the app is open, whichever tab you are on.

3. Icons & Buttons

Icon / control	Label	What it does
create-outline	New message	Switches the list to the contact picker.
Green count pill	—	Unread messages from that person.
Initials circle	—	The person's first and last initial on brand green.

4. How to Use

1. Tap the Messages tab.
2. Tap a row to open that conversation.
3. Tap the pencil at the top right to start a new one.
4. Pull down to refresh, though the list also refreshes itself every fifteen seconds.

5. User Actions

Action	Where / how
Open a conversation	Tap its row.
Start a new conversation	Tap the pencil icon.
Refresh	Pull down from the top.

6. Expected Result

After this action	The application does this
The tab is opened	Conversations are listed most recently active first, with unread counts.
A conversation is opened	Everything received in it is marked read; the pill disappears and the tab badge drops.
A new message arrives	Within fifteen seconds the row moves to the top, its preview updates and the unread count rises.
Nobody has written to you yet	The empty line points at the pencil.

WHY MESSAGES IS A TAB AND NOT A MODULE TILE

A message nobody is told about is a message nobody reads. Only a tab can carry the unread count where it will actually be seen.

7. Block Diagram

8. Workflow

START · Messages tab

SCREEN 7.12 · MESSAGES — CONTACT PICKER

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - NEW MESSAGE / CONTACT PICKER]

Insert NEW MESSAGE / CONTACT PICKER screenshot here.

1. Purpose

Chooses who a new conversation is with. It lists everyone else in the company that the signed-in person is allowed to message.

2. UI Components

UI element	What it shows
Header	The title changes to "Choose someone", and the compose icon becomes a close icon.
Contact rows	Initials circle, the person's name, and beneath it their designation and department — or, where those are not set, their role with the underscores removed.
Empty state	"No one to message."

3. Icons & Buttons

Icon / control	Label	What it does
close	Cancel	Returns to the conversation list without starting anything.
Contact row	—	Opens a conversation with that person.

4. How to Use

1. From the Messages tab, tap the pencil icon.
2. Find the person in the list.
3. Tap their row. An empty conversation opens.
4. Type the first message and send it.

5. User Actions

Action	Where / how
Choose a recipient	Tap their row.
Cancel	Tap the close icon in the header.

6. Expected Result

After this action	The application does this
A person is chosen	An empty conversation opens with "Nothing yet — write the first message."
The first message is sent	The conversation appears in the list for both people.
Cancel is tapped	The conversation list returns unchanged.

7. Block Diagram

8. Workflow

SCREEN 7.13 · MESSAGES — CONVERSATION

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - MESSAGE CONVERSATION SCREEN]

Insert MESSAGE CONVERSATION SCREEN screenshot here.

1. Purpose

One conversation, oldest message at the top. This is the side of the system that matters most when HR raises something from a desk and the person it concerns is holding a phone.

2. UI Components

UI element	What it shows
Header	A back chevron, a small initials circle and the other person's name on one line.
Message bubbles	Your own messages are right-aligned on brand green with white text; theirs are left-aligned on white with a hairline border. Each bubble is at most 80 % of the screen width and carries a timestamp.
Read receipt	". read" appears after the timestamp inside your own bubbles once the other person has opened the conversation.
Empty state	"Nothing yet — write the first message."
Composer	A rounded multi-line field along the bottom, capped at 2 000 characters, with a round green send button beside it. The field grows to about five lines as you type.
Live refresh	While a conversation is open it re-reads every fifteen seconds, so a reply arrives without any action from you.

3. Icons & Buttons

Icon / control	Label	What it does
chevron-back	Back	Returns to the conversation list.
send	Send	Sends the typed message. Dimmed until something is typed.
Spinner	(replaces the send icon)	The message is being sent.

4. How to Use

1. Open a conversation from the Messages list.
2. Read upward — the newest message is at the bottom.
3. Tap the field at the bottom and type. It grows as the message gets longer.
4. Tap the green send button.

- The message appears in your own bubble immediately, and "· read" is added once the other person opens the conversation.

5. User Actions

Action	Where / how
Read the conversation	Scroll. It opens at the newest message.
Send a message	Type in the composer and tap send.
Go back	The chevron in the header.

6. Expected Result

After this action	The application does this
A message is sent	It appears immediately in your own bubble with the time. The other person's badge rises within fifteen seconds.
A message cannot be sent	The text is left in the box rather than thrown away — retyping a message the app lost is worse than a send that visibly did not go.
The conversation is opened	Everything received in it is marked read, silently. A failure here is ignored: a badge that stays lit is a smaller problem than an error thrown over a conversation.
A reply arrives while you are reading	It appears within fifteen seconds without any action from you.

PRIVACY

Neither the sender nor the company is submitted with a message — the sender defaults to the signed-in account and the server stamps the company, so there is no field a caller could put someone else's name in. Row-level security limits every message row to the two people in the conversation.

7. Block Diagram

8. Workflow

SCREEN 7.14 · PROFILE SHEET

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - EMPLOYEE PROFILE SCREEN]

Insert EMPLOYEE PROFILE SCREEN screenshot here.

1. Purpose

Who is signed in, and the two things only this screen can do: sign out, and detach this phone from the account. It is a full-screen sheet over the tabs rather than a sixth tab, because it is opened a few times a month and a permanent tab would spend its width every day to say so.

2. UI Components

UI element	What it shows
Title bar	"Profile" at 18 pt bold with a close icon at the right.
Identity block	A 72-point brand-green circle with your initials, your full name at 20 pt bold, your email beneath it, and a pale outlined pill showing your role with the underscores removed — "hr admin", "project manager".
Detail card	Five rows: Employee code, Designation, Department, Joined and Phone. Any value not set shows an em dash.
This device	A card headed "This device" with a fingerprint icon — green when this phone is set up for you, grey when it is not — a line saying which, and a line explaining how the key is held.
Remove this device	A red text button at the foot of the device card, shown only when the phone is set up for you.
Sign out	A full-width brand-green button with a door icon.

3. Icons & Buttons

Icon / control	Label	What it does
close	—	Closes the sheet and returns to Home.
finger-print / finger-print-outline	—	Green and filled when this phone is enrolled for you; grey and outlined when it is not.
Remove this device	Remove this device	Deletes your check-in key from this handset, after a confirmation.
log-out-outline	Sign out	Ends the session and returns to the sign-in screen.

4. How to Use

1. Tap your avatar at the top right of Home.

2. Check your details. If the employee code, designation or department is wrong, ask HR to correct it — this screen is read-only.
3. Under This device, check whether the phone is set up for your check-in.
4. To hand the phone to somebody else, tap Remove this device and confirm.
5. To sign out, tap Sign out.
6. Tap the close icon to return to Home.

5. User Actions

Action	Where / how
View your own record	Read the detail card.
See your role	The pill under your email.
Detach the phone	Remove this device, then confirm.
Sign out	The green button at the foot.
Close	The close icon at the top right.

6. Expected Result

After this action	The application does this
The sheet opens	Your name, email, role and employment details are read and shown.
Remove this device is confirmed	The key is deleted from this handset. The Check in tab reverts to offering Set up biometric check-in. Anyone else set up on the same phone keeps their own key.
Sign out is tapped	The session ends and the sign-in screen appears. Your device key is deliberately kept — signing back in on your own phone should not mean setting it up again.
A field is not set	It shows an em dash rather than a blank.

WHEN TO REMOVE THE DEVICE

Do this when the handset is being handed to somebody else. On a shared phone the key belongs to whoever set it up, and "Set up" on the Check in tab is offered only to that person until the key is removed.

7. Block Diagram

8. Workflow

SCREEN 7.15 · PORTAL TAB — THE FULL HRMS

Module	Mobile app	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	------------	--------------	--

[SCREENSHOT PLACEHOLDER - PORTAL TAB]

Insert the Portal tab showing the web portal's dashboard.

1. Purpose

The rest of the HRMS — payroll runs, letter generation, reports, settings, recruitment, project management and everything else — served from the same portal a browser would use, inside the app and already signed in.

Rebuilding forty screens natively in order to look at them on a phone would be a great deal of work to arrive exactly where the web application already is. What the native shell usefully adds is the hardware sensor at the moment attendance is recorded, and that is the Check in tab.

2. UI Components

UI element	What it shows
Portal view	The full HRMS web application filling the screen below the status bar, with its own sidebar, top bar and bottom navigation.
Session hand-off	The token from the native sign-in is written into the portal before its first line of code runs, so the portal opens signed in as you. You are never asked to sign in twice.
Loading state	A large brand-green spinner while the portal loads.
Failure state	"Could not reach the portal.", the server address it tried, a line of advice, and a Try again button.
State retention	The portal is not unloaded when you switch tabs, so it keeps its page and its scroll position.

3. Icons & Buttons

Icon / control	Label	What it does
Try again	Try again	Reloads the portal after a failure.
(portal icons)	—	Every icon inside the portal is documented in Section 3.5.

4. How to Use

1. Tap the Portal tab.
2. Wait for the spinner. The portal opens on its dashboard, already signed in.
3. Use the portal's own navigation — the sidebar on a wide screen, the bottom bar and the More button on a narrow one.
4. Switch to another tab and back: the portal is exactly where you left it.
5. If it fails to load, tap Try again.

5. User Actions

Action	Where / how
Reach any module not built natively	Navigate inside the portal.
Reload after a failure	Try again.
Change your password	Portal → account menu → Profile → Change password. This is the only place a password can be changed.

6. Expected Result

After this action	The application does this
The portal loads	It opens on the dashboard for your role — the organisation view for every role except Employee, who gets the personal view.
You switch away and back	The same page, at the same scroll position. Nothing reloads.
You sign out and a colleague signs in	The portal is given a fresh session and everything the previous person's session had cached is cleared first.
The portal cannot be reached	The failure screen names the address it tried and offers Try again.

WHICH SCREENS ARE NATIVE AND WHICH ARE PORTAL

Twelve modules are native — People, Tasks, Leaves, Payslips, Projects, Attendance, Reporting Manager, Assets, Policies, Letters, Calendar and Announcements — plus Messages and the whole of check-in. Everything else is reached through this tab. Sections 8 to 12 mark each screen as Mobile app or In-app Portal.

7. Block Diagram

PRESENTATION

The HRMS web portal, full screen

SESSION

Native token written into the portal
before it bootsPrevious session cleared on a change
of account

TRANSPORT

The same API and the same database as the native tabs

RULES

The same row-level security decides what the portal shows

8. Workflow

START · Portal tab is tapped

SCREEN 7.16 · PORTAL NAVIGATION — SIDEBAR, TOP BAR & BOTTOM BAR

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead · Employee · Accounts Manager
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - PORTAL NAVIGATION]

Insert the portal showing the sidebar, the top bar and — on a narrow screen — the bottom bar.

1. Purpose

How the portal is navigated once the Portal tab has opened it. It has three navigation surfaces, and which of them you see depends on how wide the screen is.

2. UI Components

UI element	What it shows
Sidebar (wide screens)	A rail down the left carrying the company logo, the company name, the subtitle "HRMS", and one row per module with its own coloured icon. The active row is tinted brand green with a left border.
Collapse control	An arrow at the foot of the sidebar. Collapsed, the rail narrows to icons only; the choice is remembered between visits.
Unread badge	A count on the Messages row — a numeric pill when the sidebar is open, a plain dot when it is collapsed.
Top bar	A menu button on narrow screens, a search box reading "Search...", a light/dark toggle, a notifications bell, and your avatar with your name.
Account menu	Opened from the avatar: Profile and Logout.
Notifications	A panel headed "Notifications" currently reading "You're all caught up."
Bottom bar (narrow screens)	Four fixed tabs — Dashboard, Attendance, Leaves, Tasks — plus a More button that opens the full navigation as a drawer.
Navigation drawer	The same sidebar, sliding in from the left on a narrow screen. It closes as soon as you navigate.
Support banner	An amber bar above the top bar, present only while a platform administrator is working inside the company — Screen 12.2.

3. Icons & Buttons

Icon / control	Label	What it does
Menu (three lines)	Open navigation	Opens the navigation drawer on a narrow screen.
Chevron left / right	Close / Open sidebar	Collapses or expands the sidebar.

Icon / control	Label	What it does
Search	Search...	Press Enter to open the Employees list filtered by what you typed.
Sun / Moon	Toggle theme	Switches between light and dark appearance.
Bell	Notifications	Opens the notifications panel.
Avatar	—	Opens the account menu.
User-circle	Profile	Opens your profile and the change-password form.
Log-out	Logout	Signs out of the portal.
More	Open all navigation options	Opens the full navigation from the bottom bar.

4. How to Use

1. Open the Portal tab.
2. On a wide screen, use the sidebar on the left. On a phone, use the four tabs along the bottom and the More button for everything else.
3. Type a name in the search box and press Enter to jump to that person in the Employees list.
4. Use the sun or moon icon to switch between light and dark.
5. Open your avatar for Profile and Logout.
6. Collapse the sidebar with the arrow at its foot if you want more room for the content.

5. User Actions

Action	Where / how
Move between modules	The sidebar row, the bottom tab, or More.
Search for a colleague	The search box, then Enter.
Switch appearance	The sun / moon icon.
Open your profile or sign out	The avatar menu.
Give the content more room	Collapse the sidebar.

6. Expected Result

After this action	The application does this
A module is opened	The row is highlighted and the content area animates in.
The sidebar is collapsed	It narrows to icons, and the choice is remembered the next time you open the portal.
A search is submitted	The Employees list opens, filtered by what you typed.
A message arrives	The Messages row gains a count, refreshed about every thirty seconds.
A module is not enabled for the company, or not permitted for your role	Its row is not shown at all.

TWO REASONS A NAVIGATION ROW CAN BE MISSING

Either the role is not permitted it — Reports and Settings for anyone below HR — or the company has not enabled that module. Both hide the row completely rather than greying it out.

7. Block Diagram

8. Workflow

8 Employee Module

Everything an employee can reach. This is also the baseline that every other role inherits — a Founder sees all of these screens too, with more rows in them and more buttons on them. Read this section first, whichever role you are documenting for.

Group	Screens	Where
Native modules	8.1 – 8.12 — People, Tasks, Leaves, Apply for leave, Payslips, Projects, Attendance, Assets, Policies, Calendar, Announcements, Letters	Modules tab
Portal — self-service	8.13 – 8.20 — Dashboard, Profile, Attendance, Biometric panel, Leaves, Apply leave, Payroll, Documents	Portal tab
Portal — work	8.21 – 8.25 — Tasks, Projects, Calendar, Announcements, Messages	Portal tab

EVERY SCREEN IN THIS SECTION IS REACHED THE SAME WAY

Sign in → the tab named in each screen's Module strip → the screen. Screens 7.1 to 7.15 cover the login, the tabs and the shared list behaviour that all of these sit on.

SCREEN 8.1 · PEOPLE — COMPANY DIRECTORY

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PEOPLE / DIRECTORY SCREEN]

Insert PEOPLE / DIRECTORY SCREEN screenshot here.

1. Purpose

The company directory. Who works here, what they do, and which department they sit in — the screen people open to find a colleague's email or work out who to ask about something.

2. UI Components

UI element	What it shows
Header	"People" at 22 pt bold, with ‹ Back at the left.
Search	"Search people". Matches name, email, department and designation as you type.
Row title	The person's full name.
Row subtitle	Their email address.
Row right-hand value	Their department — Engineering, Design, AI/ML, Operations.
Row badge	Their designation, in a neutral grey pill: Founder & CEO, Software Engineer, Product Designer, AI Engineer, HR Executive.
Empty state	"No colleagues listed yet."
Order & size	Alphabetical by name, up to 200 people.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.
Search field	Search people	Narrows the list to matching rows.

4. How to Use

1. Open Modules and tap the indigo People tile.
2. Scroll the alphabetical list, or type a name, an email or a department into the search box.
3. Read the row — the name, their email, their department on the right and their designation as a badge.
4. To write to somebody you find here, go to the Messages tab, tap the pencil and choose them from the list.

5. User Actions

Action	Where / how
Find a colleague	Type any part of their name, email, department or designation.
Refresh the directory	Pull down from the top.
Return to the grid	⏮ Back.

6. Expected Result

After this action	The application does this
The module opens	Everyone in the company is listed alphabetically.
A search is typed	The list narrows immediately, matching on everything visible in a row.
Nobody matches	"Nothing matching "{text}"."
A person has no department or designation set	That slot is simply left blank in the row rather than showing a placeholder.

WHAT THE DIRECTORY DOES NOT SHOW

Phone numbers, addresses, dates of birth, PAN, Aadhaar and bank details are not in the directory at any role. Those live on the employee's own record and are reachable only through the portal, by HR or by the employee themselves.

7. Block Diagram

8. Workflow

START · People tile is tapped

SCREEN 8.2 · TASKS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - TASKS SCREEN]

Insert TASKS SCREEN screenshot here.

1. Purpose

Every task you are allowed to see, with the one control that matters on a phone: moving a task one step along its flow.

2. UI Components

UI element	What it shows
Header	"Tasks" at 22 pt bold, ‹ Back at the left.
Search	"Search tasks".
Row title	The task title.
Row subtitle	The project name and the assignee, separated by a middle dot.
Row right-hand value	"due 12 Sep", or blank when no due date is set.
Row badge	The status — assigned (neutral), in progress (amber), review (amber), completed (green).
Empty state	"Nothing assigned."
Order & size	By due date, soonest first, up to 100 tasks.

3. Icons & Buttons

Icon / control	Label	What it does
Row tap	—	Opens the action sheet offering the next step in the flow.
Move to {stage}	In the action sheet	Advances the task: assigned → in progress → review → completed.

4. How to Use

1. Open Modules and tap the sky-blue Tasks tile.
2. Find the task — the list is ordered by due date, and search matches the title, project, assignee, date and status.
3. Tap the row.
4. Tap "Move to {next stage}" in the sheet that appears.
5. The list re-reads and the badge changes.

5. User Actions

Action	Where / how
Advance a task	Tap the row, then Move to {stage}.
Find a task	Search by title, project, assignee or status.
Refresh	Pull down from the top.

6. Expected Result

After this action	The application does this
A task is advanced	Its badge changes to the next stage and the list re-reads.
A task is moved to completed	Its progress is set to 100 % at the same time, so a completed task never reads 35 % complete.
A completed task is tapped	Nothing is offered — there is nowhere further for it to go.
The move is refused	"Not done" with the database's own reason.

ONE STEP, NOT A FREE CHOICE

The phone offers the next stage only, not a menu of every status. The full task record — description, checklist, comments, priority, reassignment — is edited in the portal (Screen 8.21).

7. Block Diagram

8. Workflow

START · Tasks tile is tapped

SCREEN 8.3 · LEAVES

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - LEAVE LIST SCREEN]

Insert LEAVE LIST SCREEN screenshot here.

1. Purpose

Your leave requests, newest first, with the Apply button in the header. For an approver the same screen carries the whole company's requests and the Approve and Reject actions — see Screen 9.1.

2. UI Components

UI element	What it shows
Header	⋈ Back, the title "Leaves", and a green Apply button pushed to the far right.
Search	"Search leaves".
Row title	The leave type — Casual Leave, Sick Leave, Paid Leave, Work From Home, Comp Off.
Row subtitle	Normally the employee's name and the dates. Once a decision has been made, the decision note replaces the name — because a rejected request's reason is the thing you opened the list to read.
Row right-hand value	The number of days, as "3d".
Row badge	pending (amber), approved (green) or rejected (red).
Empty state	"No leave requests."
Order & size	By start date, most recent first, up to 100 requests.

3. Icons & Buttons

Icon / control	Label	What it does
Apply	Apply	Opens the Apply for leave sheet — Screen 8.4.
Row tap	—	For an approver, on a pending row, opens Approve / Reject. For everyone else, nothing.

4. How to Use

1. Open Modules and tap the amber Leaves tile.
2. Read your requests — the newest is at the top.
3. Check the badge on each: amber means it is still with your approver, green means approved, red means rejected.
4. On a rejected row, read the subtitle — it carries the reason your approver wrote.
5. Tap Apply in the header to make a new request.

5. User Actions

Action	Where / how
Apply for leave	The green Apply button.
Check the state of a request	Read its badge.
Read why a request was refused	The row's subtitle.
Refresh	Pull down from the top.

6. Expected Result

After this action	The application does this
The module opens	Your own requests are listed, most recent first.
A request is still pending	An amber badge and no note.
A request was approved	A green badge. If your approver wrote a note, it replaces the name in the subtitle.
A request was rejected	A red badge, and the reason in the subtitle.
You have never applied	"No leave requests."

7. Block Diagram

8. Workflow

SCREEN 8.4 · APPLY FOR LEAVE (MOBILE SHEET)

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - LEAVE APPLICATION SCREEN]

Insert LEAVE APPLICATION SCREEN screenshot here.

1. Purpose

Books leave from the phone. The form itself checks almost nothing — the database checks the balance and the dates, and its refusal is what you see, so there is no second copy of the rules to disagree with.

2. UI Components

UI element	What it shows
Title	"Apply for leave".
Leave-type chips	One rounded chip per leave type, wrapping across the sheet. The selected chip turns solid brand green with white text. The first type is selected for you.
Start and end date	Two side-by-side fields in YYYY-MM-DD, both pre-filled with today so the format is shown rather than explained.
Reason	A single-line field, optional, reading "Reason (optional)".
Cancel	An outlined button that closes the sheet.
Apply	A brand-green button; it shows a spinner while the request is submitted.

3. Icons & Buttons

Icon / control	Label	What it does
Leave-type chip	Casual Leave · Sick Leave · Paid Leave · Work From Home · Comp Off	Chooses the type. Only one can be selected.
Cancel	Cancel	Closes the sheet without applying.
Apply	Apply	Submits the request.

4. How to Use

1. Open the Leaves module and tap Apply.
2. Tap the chip for the kind of leave you want.
3. Set the start date. Edit the pre-filled date in place, keeping the YYYY-MM-DD format.
4. Set the end date. For a single day, leave it the same as the start date.
5. Type a reason if you want to — it is optional, and it is what your approver reads first.
6. Tap Apply.
7. The sheet closes and the list re-reads with your new request at the top, badged pending.

5. User Actions

Action	Where / how
Choose the leave type	Tap a chip.
Set the dates	Edit the two date fields.
Give a reason	The reason field.
Submit	Apply.
Abandon	Cancel.

6. Expected Result

After this action	The application does this
The request is accepted	The sheet closes, the list re-reads, and the new row appears at the top with an amber pending badge.
You have no balance left of that type	"Not applied" with the reason from the database — the balance check happens there, not in the form.
The end date is before the start date	"Not applied" with the reason.
The dates overlap leave you already have	"Not applied" with the reason.
Cancel is tapped	Nothing is submitted and the list is unchanged.

WHY THE DATES ARE TYPED RATHER THAN PICKED

A date picker is another native component and another set of platform differences, and this form is used a handful of times a year. The fields are pre-filled with today, which shows the format rather than explaining it. The portal's Apply Leave dialog (Screen 8.17) does offer a proper date picker.

7. Block Diagram

8. Workflow

SCREEN 8.5 · PAYSLIPS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PAYSLIPS SCREEN]

Insert PAYSLIPS SCREEN screenshot here.

1. Purpose

Your monthly payslips, most recent year first. The phone shows the headline figures; the full itemised slip and its PDF are in the portal (Screen 8.18).

2. UI Components

UI element	What it shows
Header	"Payslips" at 22 pt bold, < Back at the left.
Search	"Search payslips".
Row title	The period, as "Aug 2026".
Row subtitle	The employee's name.
Row right-hand value	Net pay, in rupees, grouped the way Indian currency is read — ₹1,24,500.
Row badge	"gross ₹1,58,000" in a neutral pill.
Empty state	"No payslips yet."
Order & size	Most recent year first, up to 60 payslips.

3. Icons & Buttons

Icon / control	Label	What it does
< Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the green Payslips tile.
2. Find the month you want — the newest is at the top, and search matches the month, the year and the amounts.
3. Read the net figure on the right and the gross in the badge.
4. For the full slip with every earning and deduction, and to download the PDF, open the Portal tab and go to Payroll — see Screen 8.18.

5. User Actions

Action	Where / how
Check a month's pay	Read the row.
Find a particular month	Search for it.
Get the full itemised slip	Portal tab → Payroll → the eye icon on that row.

6. Expected Result

After this action	The application does this
The module opens	Your payslips are listed, newest first.
No payroll has been run yet	"No payslips yet."
An amount is missing	An em dash is shown rather than a zero.

WHOSE PAYSPLIPS THESE ARE

Yours. The list is filtered to the signed-in person explicitly, not left to row security alone — otherwise an HR admin opening "Payslips" would be shown the first sixty payslips in the company rather than their own.

7. Block Diagram

NO

"No payslips yet."

The itemised slip and its PDF are in the Portal tab.

END · The month's pay is confirmed

SCREEN 8.6 · PROJECTS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PROJECTS SCREEN]

Insert PROJECTS SCREEN screenshot here.

1. Purpose

Every project you can see, ordered by deadline, with its progress, priority, status and how many people are on it.

2. UI Components

UI element	What it shows
Header	"Projects", ‹ Back at the left.
Search	"Search projects".
Row title	The project name.
Row subtitle	The project description.
Row right-hand value	Progress as a percentage — "65%".
Row badge	The status and the member count together — "active · 4 members". Coloured: active green, planning neutral, on hold amber, completed green.
Empty state	"No projects."
Order & size	By deadline, soonest first, up to 100 projects.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the violet Projects tile.
2. Read the list — the project closest to its deadline is at the top.
3. Check the percentage on the right and the status badge beneath the description.
4. For the full project — members, tech stack, and the tasks inside it — open the Portal tab and go to Projects (Screen 8.22).

5. User Actions

Action	Where / how
See where a project stands	Read its progress and status badge.

Action	Where / how
Find a project	Search by name, description or status.
Open the full project	Portal tab → Projects → the project row.

6. Expected Result

After this action	The application does this
The module opens	Projects are listed by deadline.
A project is on hold	An amber badge.
A project has one member	The badge reads "1 member", not "1 members".
There are no projects	"No projects."

7. Block Diagram

8. Workflow

START · Projects tile is tapped

Projects are read, soonest deadline first

Progress, priority, status and member count are shown per row

Project membership and the tasks inside a project are managed in the Portal tab.

END · The project's state is understood

SCREEN 8.7 · ATTENDANCE HISTORY

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - ATTENDANCE HISTORY SCREEN]

Insert ATTENDANCE HISTORY SCREEN screenshot here.

1. Purpose

Your own attendance, day by day, newest first. Not the company's — this list is scoped to the signed-in person for every role, without exception.

2. UI Components

UI element	What it shows
Header	"Attendance", ‹ Back at the left.
Search	"Search attendance".
Row title	The date, as "5 Sep".
Row subtitle	The check-in and check-out times, as "09:14 – 18:02". Where the punch was made with a fingerprint, " · biometric" is appended.
Row right-hand value	Hours worked, as "8.5h".
Row badge	"late" (amber) if you arrived late; otherwise the day's status — present (green), half day (amber), on leave (neutral), absent (red).
Empty state	"No attendance recorded."
Order & size	By date, newest first, up to 120 days.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the blue Attendance tile.
2. Read down the list — today is at the top.
3. Check the badge on each row for the day's status.
4. Where a day shows "late", the badge replaces the status — the times are already on the row, so "late" is the more useful of the two.
5. Search for a date or a status to filter, for example "absent".

5. User Actions

Action	Where / how
Review your month	Scroll the list.
Find every late day	Type "late" in the search box.
Check a specific date	Search for it, for example "5 Sep".
Refresh	Pull down from the top.

6. Expected Result

After this action	The application does this
The module opens	Your last 120 days of attendance are listed, newest first.
A day has no check-out	The out time shows an em dash and no hours are computed.
A day was marked late	An amber "late" badge replaces the status badge.
A day was leave	A neutral "on leave" badge and no times.
You have never punched	"No attendance recorded."

THIS LIST IS ALWAYS YOURS, AT EVERY ROLE

Attendance rows are titled by date and carry no name, because the screen was written to be your attendance. Left unfiltered, anyone who can read the whole company's — HR, a Founder — would open "Attendance" and get a hundred and twenty rows of everybody's punches with nothing to tell them apart. The company-wide view is the portal's Attendance → Team tab (Screen 9.4).

7. Block Diagram

SCREEN 8.8 · ASSETS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - ASSETS SCREEN]

Insert ASSETS SCREEN screenshot here.

1. Purpose

The company's asset register — laptops, monitors, phones and the rest — with their serial numbers, their condition and who is holding each one.

2. UI Components

UI element	What it shows
Header	"Assets", ‹ Back at the left.
Search	"Search assets".
Row title	The asset name, such as "MacBook Pro 14".
Row subtitle	The category and the serial number, separated by a middle dot.
Row right-hand value	Who holds it, or "unassigned".
Row badge	available (green), assigned (neutral), maintenance (amber), retired (neutral).
Empty state	"No assets recorded."
Order & size	Alphabetical by name, up to 100 assets.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the cyan Assets tile.
2. Search for the asset by name, category, serial number or the name of the person holding it.
3. Read the badge for its condition and the right-hand value for who has it.
4. To assign or return an asset, use the Portal tab — that is an HR action (Screen 9.9).

5. User Actions

Action	Where / how
Find an asset	Search by name, category or serial number.

Action	Where / how
Find who has an asset	Read the right-hand value.
See what you are holding	Search for your own name, or use Portal → Assets → My Assets.

6. Expected Result

After this action	The application does this
The module opens	The asset register is listed alphabetically.
An asset is with somebody	Their name appears on the right and the badge reads "assigned".
An asset is in the pool	The right-hand value reads "unassigned" and the badge is green.
Nothing has been recorded yet	"No assets recorded."

alphabetical, limit 100

8. Workflow

START · Assets tile is tapped

The register is read alphabetically

◆ Is the asset assigned?

YES

The holder's name is shown

NO

"unassigned"

Assignment and return are portal actions, available to HR and above.

END · The asset is located

SCREEN 8.9 · POLICIES

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - POLICIES SCREEN]

Insert POLICIES SCREEN screenshot here.

1. Purpose

Published HR policies, alphabetically, each with its version number and when it was last changed.

2. UI Components

UI element	What it shows
Header	"Policies", ‹ Back at the left.
Search	"Search policies".
Row title	The policy title.
Row subtitle	The policy text, wrapped to two lines.
Row right-hand value	When it was last updated, as "22 Aug".
Row badge	The version, as "v3".
Empty state	"No policies published."
Order & size	Alphabetical by title, up to 50 policies.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the slate Policies tile.
2. Find the policy by name, or search for a word inside it — search matches the body text as well as the title.
3. Read the two-line preview. For the full text, open the Portal tab and go to Documents → Policies.
4. Check the version badge: if it has changed since you last read it, the policy has been revised.

5. User Actions

Action	Where / how
Find a policy	Search by title or by a word in the text.
Check whether a policy has changed	Compare the version badge and the date.

Action	Where / how
Read the full policy	Portal tab → Documents → Policies.

6. Expected Result

After this action	The application does this
The module opens	Policies are listed alphabetically with their versions.
A policy has been revised	Its version number rises and the date changes.
Nothing is published	"No policies published."

Policies are read alphabetically

A search matches titles and body text

Policies are written and revised by HR in the portal.

END · The policy is found and its version confirmed

SCREEN 8.10 · CALENDAR

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - CALENDAR SCREEN]

Insert CALENDAR SCREEN screenshot here.

1. Purpose

Company events, meetings and holidays, soonest first — a list rather than a month grid, because a list is what a phone shows well.

2. UI Components

UI element	What it shows
Header	"Calendar", ‹ Back at the left.
Search	"Search calendar".
Row title	The event title.
Row subtitle	The event description.
Row right-hand value	The date, as "14 Oct".
Row badge	The event type — meeting, event or holiday.
Empty state	"Nothing scheduled."
Order & size	By date, soonest first, up to 100 entries.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the rose Calendar tile.
2. Read down the list — the next thing coming up is at the top.
3. Search for "holiday" to see only the holidays, or for a month name to find a particular period.
4. For the month grid, and to add an event, open the Portal tab and go to Calendar (Screen 8.23).

5. User Actions

Action	Where / how
See what is coming up	Read the list from the top.

Action	Where / how
Find the holidays	Search for "holiday".
Add an event	Portal tab → Calendar → New Event. Available to Team Lead and above.

6. Expected Result

After this action	The application does this
The module opens	Upcoming entries are listed, soonest first.
Nothing is scheduled	"Nothing scheduled."

SCREEN 8.11 · ANNOUNCEMENTS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - ANNOUNCEMENTS SCREEN]

Insert ANNOUNCEMENTS SCREEN screenshot here.

1. Purpose

Company announcements, newest first, with pinned ones flagged. The most recent of these is also shown at the foot of the Home screen.

2. UI Components

UI element	What it shows
Header	"Announcements", ‹ Back at the left.
Search	"Search announcements".
Row title	The announcement title.
Row subtitle	The body text, wrapped to two lines.
Row right-hand value	When it was posted, as "3 Sep".
Row badge	"pinned" in amber, on pinned announcements only.
Empty state	"Nothing announced."
Order & size	Newest first, up to 50 announcements.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the orange Announcements tile — or tap the announcement card at the foot of Home.
2. Read down the list. The newest is at the top; anything pinned carries an amber badge.
3. For the full text of a long announcement, open the Portal tab and go to Announcements.

5. User Actions

Action	Where / how
Catch up	Read down the list.
Find an old announcement	Search by title or by a word in the body.

Action	Where / how
Post an announcement	Portal tab → Announcements → New Announcement. HR and above only.

6. Expected Result

After this action	The application does this
The module opens	Announcements are listed newest first.
An announcement is pinned	An amber "pinned" badge.
Nothing has been posted	"Nothing announced."

7. Block Diagram

NO

No badge

END · The company news is read

SCREEN 8.12 · LETTERS

Module	Mobile app — native	Available to	Every role
--------	---------------------	--------------	------------

[SCREENSHOT PLACEHOLDER - LETTERS SCREEN]

Insert LETTERS SCREEN screenshot here.

1. Purpose

The formal letters the company has issued — offer, appointment, experience, relieving and employment certificates. An employee sees the letters issued to them; HR sees the whole issue log, which is to say who has been sent what.

A letter is the one thing in this application that is read rather than scanned, so tapping a row opens the document itself rather than an action sheet.

2. UI Components

UI element	What it shows
Header	"Letters" at 22 pt bold, ‹ Back at the left, and — for HR and above — a green Generate button pushed to the far right.
Search	"Search letters".
Row title	The letter's formal name: Letter of Offer, Appointment Letter, Experience Certificate, Relieving Letter or Certificate of Employment.
Row subtitle	The name of the employee it was issued to.
Row right-hand value	When it was issued, as "12 Aug".
Row badge	"by {name}" — who generated it.
Empty state	"No letters issued yet."
Order & size	Most recently issued first, up to 100 letters.
Letter view	A full-screen document on a white page with a ruled letterhead — deliberately not the app's list styling, so it reads as a document rather than another screen of the app.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.
Generate	Generate	Opens the Generate letter form. Shown only to the Founder, the Company Admin and the HR Admin — see Screen 9.19.
Row tap	—	Opens the letter itself.

Icon / control	Label	What it does
◀ Close	Close	Closes the letter and returns to the list.
share-outline	Share	Hands the letter to the phone's own share sheet as text — email, WhatsApp, save to files.

4. How to Use

1. Open Modules and tap the amber Letters tile.
2. Find the letter. Search matches the letter type, the employee's name, the date and who issued it.
3. Tap the row. The letter opens full screen, laid out as the printed template.
4. Read it: the reference line and date at the top, then the recipient, the subject, the body, the details table and the signature block.
5. Tap Share to send it on, or ◀ Close to go back to the list.

5. User Actions

Action	Where / how
Read a letter issued to you	Tap its row.
Find an old letter	Search by type, name or date.
Send a letter on	Share, from inside the open letter.
Issue a new letter	Generate — HR and above only, Screen 9.19.

6. Expected Result

After this action	The application does this
A row is tapped	The letter opens full screen, built from the same wording as the portal's own letter view — an offer issued from a phone and the same offer reopened on the web say exactly the same thing.
Share is tapped	The phone's share sheet opens with the letter as text and the subject line "{Letter title} — {employee name}". Dismissing the sheet does nothing and reports nothing.
A letter cannot be opened	"Could not open this letter" is shown in place of the document.
An employee opens the module	Only the letters issued to them are listed. This is not the app filtering — the database returns nothing else.
HR opens the module	Every letter in the company is listed, with the employee's name on each row.
Nothing has been issued	"No letters issued yet."

THE SAME WORDS ON THE PHONE AND ON THE WEB

The wording of every letter lives in one place and is used by both the app and the portal. A letter is a legal-ish artefact: if the two rendered differently, the company would quietly have issued two different documents.

WHY THE GENERATE BUTTON IS GATED BUT THE MODULE IS NOT

Everyone has letters — their own — but only HR issues them. So the module is offered to everybody and the Generate button to three roles. Hiding the whole module from employees would hide from them the letters that are theirs.

7. Block Diagram

8. Workflow

END · The letter is read, or shared

SCREEN 8.13 · PORTAL — EMPLOYEE DASHBOARD

Module	In-app Portal	Available to	Employee
--------	---------------	--------------	----------

[SCREENSHOT PLACEHOLDER - EMPLOYEE DASHBOARD]

Insert EMPLOYEE DASHBOARD screenshot here.

1. Purpose

The personal dashboard an employee lands on inside the Portal tab. Everyone else lands on the organisation dashboard instead (Screen 10.1).

2. UI Components

UI element	What it shows
Greeting	"Good Morning / Afternoon / Evening, {first name}" with today's full date beneath it.
Quick actions	Four buttons: Apply Leave, View Payslips, My Documents, My Assets.
Seven stat cards	Today · Working Hours Today · Present Days (Month) · Leave Balance · Assigned Projects · Latest Net Pay · Team. Each is clickable and links to the page it summarises.
My Tasks (Kanban)	Four columns — Assigned, In Progress, Review, Completed — each with a count and up to three task cards showing title, project, progress bar, priority and due date, and a "+N more" link beyond that.
My Projects	The projects you are a member of, with status, tech-stack badges, a progress bar, priority and days remaining or "Overdue".
Today's Schedule	Today's calendar entries with a type icon, plus a look-ahead list for the rest of the month.
Attendance widget	In and Out times, week and month present-day counts, and a coloured square per day of the month.
Leaves widget	Available, Applied and Pending counts, upcoming holidays, and an Apply Leave button.
Task insights	Two bar charts — My Tasks by Status, and Attendance This Month by week.
My Profile card	Avatar, name, employee code, designation, department, reporting manager, experience, phone, email and skill badges.
Announcements	The latest announcements with a Pinned badge where applicable, and a View all button.

3. Icons & Buttons

Icon / control	Label	What it does
Apply Leave	Apply Leave	Opens the Apply Leave dialog.
View Payslips	View Payslips	Goes to Payroll.

Icon / control	Label	What it does
My Documents	My Documents	Goes to Documents.
My Assets	My Assets	Goes to Assets.
Check In	Check In	Records a check-in from the widget. Disabled once you have checked in.
Check Out	Check Out	Records a check-out. Disabled until you have checked in.
Edit Profile	Edit Profile	Goes to the Profile page.
View all	View all	Opens the full Announcements or Tasks list.
Stat card	—	Each card is a link to the page it summarises.

4. How to Use

1. Open the Portal tab. As an employee you land here.
2. Read the seven stat cards across the top for the day's position.
3. Use the Kanban to see what is on your plate and click a card to open the task.
4. Use the attendance widget to check in or out without leaving the dashboard.
5. Use Apply Leave in the quick actions or in the leaves widget to raise a request.
6. Scroll to the foot for your profile summary and the latest announcements.

5. User Actions

Action	Where / how
Check in or out	The buttons in the attendance widget.
Apply for leave	The quick action, or the button in the leaves widget.
Open a task	Click its card in the Kanban.
Open a project	Click its tile in My Projects.
Jump to a page	Click any of the seven stat cards.

6. Expected Result

After this action	The application does this
Check in succeeds	A message reads "Checked in" and the widget updates.
Check in fails	"Could not check in".
Check out succeeds	"Checked out".
A leave request is submitted	"Leave request submitted" and the leaves widget updates.
A task card is clicked	The task detail dialog opens — Screen 8.21.

After this action	The application does this
Nothing is scheduled today	"Nothing on your schedule today."
You are on no projects	"You're not assigned to any projects yet."

7. Block Diagram

8. Workflow

SCREEN 8.14 · PORTAL — MY PROFILE & CHANGE PASSWORD

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PROFILE & CHANGE PASSWORD SCREEN]

Insert PROFILE & CHANGE PASSWORD SCREEN screenshot here.

1. Purpose

Your identity inside the portal, and the only place in the whole system where a password can be changed.

2. UI Components

UI element	What it shows
Heading	"My Profile".
Profile card	Avatar, full name, email and a role badge with the underscores removed — "hr admin", "project manager".
Change password card	Three fields: Current password, New password, Confirm new password. Each is masked with a reveal control.
Update button	"Update password", with a spinner while it submits.

3. Icons & Buttons

Icon / control	Label	What it does
Eye / Eye-off	Show / hide password	Reveals or masks each of the three fields.
Update password	Update password	Submits the change.

4. How to Use

1. Open the Portal tab, then the account menu at the top right, then Profile.
2. Type your current password.
3. Type the new password. It must be at least eight characters.
4. Type it again in the third field.
5. Click Update password.

5. User Actions

Action	Where / how
Check your role	Read the badge under your email.
Change your password	Fill the three fields and click Update password.

6. Expected Result

After this action	The application does this
The password is changed	"Password updated" and the three fields clear.
The current password is wrong	"Could not update password. Check your current password."
The new password is too short	"Minimum 8 characters" appears under the field.
The two new passwords differ	"Passwords do not match" under the confirm field.
A field is left empty	"Required" under it.

CHANGE THE BOOTSTRAP PASSWORDS

Accounts created from the seed data carry passwords that are published in the project repository. Every one of them must be changed here before the system holds anything real.

7. Block Diagram

8. Workflow

SCREEN 8.15 · PORTAL — ATTENDANCE (MY ATTENDANCE)

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - ATTENDANCE SCREEN]

Insert ATTENDANCE SCREEN screenshot here.

1. Purpose

The portal's own attendance page. For everyone it carries a personal tab with today's punch and this month's history; for HR and above it also carries a Team tab (Screen 9.4).

2. UI Components

UI element	What it shows
Heading	"Attendance", with tabs beneath it.
Tabs	"My Attendance" for everyone; "Team" for Founder, Company Admin and HR Admin only.
Today card	Today's date, the In and Out times, and the Check In and Check Out buttons.
Biometric panel	A fingerprint check-in section — see Screen 8.16.
History table	Columns: Date, Check In, Check Out, Working Hours, Status.
Status badges	present (green), half day (amber), on leave (neutral), absent (red), plus a separate amber "Late" badge where it applies.
Empty state	"No attendance records yet this month."

3. Icons & Buttons

Icon / control	Label	What it does
Log-in arrow	Check In	Records a check-in. Disabled once you have checked in.
Log-out arrow	Check Out	Records a check-out. Disabled until you have checked in and once you have checked out.

4. How to Use

1. Open the Portal tab and go to Attendance.
2. Stay on the My Attendance tab.
3. Click Check In at the start of the day and Check Out at the end.
4. Scroll down for this month's history.
5. For a fingerprint-verified punch on a phone, use the native Check in tab instead — Screen 7.5.

5. User Actions

Action	Where / how
Record the start of the day	Check In.
Record the end of the day	Check Out.
Review the month	The history table.

6. Expected Result

After this action	The application does this
Check in succeeds	"Checked in" and the Today card fills the In time.
Check in fails	"Could not check in".
Check out succeeds	"Checked out" and the hours are computed.
Check out fails	"Could not check out".
No records this month	"No attendance records yet this month."

7. Block Diagram

8. Workflow

The punch is recorded and the Today card updates

The month's history refreshes beneath

END · The day is recorded

SCREEN 8.16 · PORTAL — BIOMETRIC CHECK-IN PANEL

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - BIOMETRIC CHECK-IN PANEL]

Insert BIOMETRIC CHECK-IN PANEL screenshot here.

1. Purpose

The portal's own fingerprint check-in, for a device whose browser exposes a biometric sensor. It does the same job as the native Check in tab and registers trusted devices in the same way.

2. UI Components

UI element	What it shows
Heading	"Biometric check-in", with the line "Verified by this device. Your fingerprint and face never leave the phone."
Unsupported message	"This device has no fingerprint or face sensor available to the browser, so biometric check-in is not offered here. Use the buttons above, or open the portal on your phone."
Selfie preview	A mirrored camera preview, with "Starting camera..." while it opens.
Registered devices	A list of the devices set up for your account, each with its label and when it was last used.

3. Icons & Buttons

Icon / control	Label	What it does
Scan-face	Set up on this device	Registers this device. The label changes to "Follow the prompt..." while the browser asks.
Fingerprint	Check in	A biometric-verified check-in.
Fingerprint	Check out	A biometric-verified check-out.
Camera / Camera-off	Turn photo on / Turn photo off	Switches the selfie on or off for this punch.
Trash	Remove {device}	Removes a registered device from your account.

4. How to Use

1. Open Portal → Attendance on a device with a fingerprint or face sensor.
2. Click "Set up on this device" and follow the browser's prompt.
3. Leave the photo on if you want a selfie attached to each punch, or turn it off.
4. Click Check in. Confirm with your fingerprint or face.
5. Click Check out at the end of the day, the same way.
6. Remove a device from the list when you stop using it.

5. User Actions

Action	Where / how
Register this device	Set up on this device.
Punch with a fingerprint	Check in / Check out.
Switch the photo on or off	The camera toggle.
Remove a device	The trash icon beside it.

6. Expected Result

After this action	The application does this
A device is registered	"This device is set up for biometric check-in".
A device is removed	"Device removed".
A punch succeeds	"Checked in" or "Checked out", with "Verified, photo saved" or "Verified".
The prompt is cancelled	"Check-in cancelled" — an informational message, not an error.
The check fails	The reason from the browser, or "Biometric check failed".
The camera is blocked	"Camera blocked — check-in still works".

7. Block Diagram

8. Workflow

START · Portal → Attendance → Biometric check-in

SCREEN 8.17 · PORTAL — LEAVES & LEAVE BALANCES

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - LEAVES SCREEN]

Insert LEAVES SCREEN screenshot here.

1. Purpose

Your leave balances as cards, your own request history, and — for an approver — the Approvals and All Leaves tabs alongside them (Screens 9.5 and 9.6).

2. UI Components

UI element	What it shows
Heading	"Leaves", with an Apply Leave button at the right.
Balance cards	One clickable card per leave type, showing the type name and "{remaining} / {allocated} d".
Tabs	"My Leaves" for everyone; "Approvals" (with a pending count badge) and "All Leaves" for Founder, Company Admin and HR Admin.
My Leaves table	Columns: Type, Dates, Days, Reason, Status, and an unlabelled actions column.
Status badges	pending (amber), approved (green), rejected (red).
Decision note	Shown beneath the status badge, prefixed with the name of the manager who decided.
Cancel	A destructive text button, on pending rows only.
Empty state	"No leave requests yet."
Leave type detail	Clicking a balance card opens a slide-over panel — see below.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Apply Leave	Opens the Apply for Leave dialog — Screen 8.18.
Cancel	Cancel	Withdraws a request that is still pending.
Balance card	—	Opens the leave-type detail panel.

4. How to Use

1. Open Portal → Leaves.
2. Read the balance cards along the top — each shows what is left against what was allocated.
3. Click a card to open its detail panel: allocated, used, remaining, days awaiting approval, and the full history for that type.
4. Use Apply Leave, at the top right or inside the detail panel, to raise a request.

5. Cancel a request from the My Leaves table while it is still pending.
6. Once decided, read the note under the status badge — it is what your approver wrote.

5. User Actions

Action	Where / how
Check a balance	Read the card, or open it for the breakdown.
Apply for leave	Apply Leave.
Withdraw a request	Cancel, on a pending row.
Read a decision	The note under the status badge.

6. Expected Result

After this action	The application does this
A request is cancelled	"Leave request cancelled" and the row disappears from the pending set.
Cancelling fails	"Could not cancel request".
A balance card is opened	The panel shows Allocated, Used and Remaining, a progress bar, a note of any days awaiting approval, and the history for that type.
No days remain of a type	The panel's Apply button is disabled and relabelled "No days remaining".
No requests exist	"No leave requests yet." and, in a type panel, "No {type} taken yet."

7. Block Diagram

8. Workflow

SCREEN 8.18 · PORTAL — APPLY FOR LEAVE DIALOG

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - LEAVE APPLICATION DIALOG]

Insert LEAVE APPLICATION DIALOG screenshot here.

1. Purpose

The portal's leave form. It offers a proper leave-type list and date pickers, and validates the dates before it submits.

2. UI Components

UI element	What it shows
Title	"Apply for Leave".
Leave type	A dropdown with the placeholder "Select leave type", listing every configured type.
Start date	A date field.
End date	A date field.
Reason (optional)	A multi-line text area.
Buttons	Cancel (outlined) and Submit (with a spinner while it runs).

3. Icons & Buttons

Icon / control	Label	What it does
Cancel	Cancel	Closes the dialog without applying.
Submit	Submit	Sends the request.

4. How to Use

1. Click Apply Leave from the Leaves page, the dashboard, the leaves widget or a leave-type panel.
2. Choose the leave type. If you opened it from a type panel, that type is already selected.
3. Pick the start date and the end date. For one day, set both to the same date.
4. Add a reason if you want to.
5. Click Submit.

5. User Actions

Action	Where / how
Choose the type	The leave-type dropdown.
Set the period	The two date fields.

Action	Where / how
Explain the request	The reason box.
Submit	Submit.

6. Expected Result

After this action	The application does this
The request is submitted	"Leave request submitted", the dialog closes and the leave lists refresh.
No type was chosen	"Select a leave type" under the dropdown.
A date is missing	"Required" under the field.
The end date is before the start date	"End date must be on or after the start date".
The balance will not cover it	"Could not submit leave request" with the reason from the database.

7. Block Diagram

8. Workflow

SCREEN 8.19 · PORTAL — MY PAYSLEIPS & PAYSLEIP VIEW

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PAYSLEIP SCREEN]

Insert PAYSLEIP SCREEN screenshot here.

1. Purpose

Your payslip history in the portal, and the full itemised slip with a downloadable PDF. For HR and above the same page also carries the payroll run and salary structures — Screens 9.7 and 9.8.

2. UI Components

UI element	What it shows
My Payslips section	A table with the columns Period, Gross Pay, Deductions, Net Pay and a view icon.
Empty state	"No payslips generated yet."
Payslip dialog title	"Salary Slip · For the month of {Month} {Year}".
Detail grid	Employee name, Employee code, Designation, Department, Date of joining, Generated on.
Earnings column	Basic salary, House Rent Allowance, Special Allowance, and a bold Gross Earnings total.
Deductions column	Provident Fund, ESIC, Professional Tax, and a bold Total Deductions.
Net pay banner	A green banner reading NET PAY with the amount, and the amount written out in words beneath it.
Footer	"This is a computer-generated statement of salary and does not require a signature. For any discrepancy, write to hr@whhoohhpath.com within seven days of receipt. This document is confidential and intended solely for the employee named above."
Signature block	"For {company name}" and "Authorised Signatory".
Reference line	{company code}/PAY/{year}/{number}.

3. Icons & Buttons

Icon / control	Label	What it does
Eye	—	Opens the payslip for that month.
Download	Download PDF	Saves the slip as Payslip_{employee code}_{Month}{Year}.pdf.

4. How to Use

1. Open Portal → Payroll.
2. Find the month in the My Payslips table.
3. Click the eye icon on that row.

4. Read the slip: earnings on the left, deductions on the right, net pay in the green banner.
5. Click Download PDF to save a copy.

5. User Actions

Action	Where / how
Open a payslip	The eye icon on its row.
Save a payslip	Download PDF.
Check a figure	Read the earnings and deductions columns.

6. Expected Result

After this action	The application does this
A payslip is opened	The full itemised slip is drawn with the company's letterhead, the reference number and the net amount in words.
Download PDF is clicked	A PDF is generated and saved with the employee code and period in its name.
The PDF cannot be generated	"Could not generate PDF".
Payroll has not been run	"No payslips generated yet."

WHOSE PAYSLIPS THIS TABLE SHOWS

Yours, and only yours. The query is filtered to the signed-in person explicitly rather than left to row security — otherwise an HR admin's "My Payslips" would silently show everyone's, truncated by the page size.

7. Block Diagram

8. Workflow

START · Portal → Payroll

SCREEN 8.20 · PORTAL — MY DOCUMENTS & LETTERS

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - DOCUMENTS SCREEN]

Insert DOCUMENTS SCREEN screenshot here.

1. Purpose

The policies published to you, and the letters and certificates issued to you. Generating a letter is an HR action — Screen 9.10.

2. UI Components

UI element	What it shows
Heading	"Documents", with tabs beneath it.
Tabs	"Policies" for everyone; "Generate Letter" for HR and above; "My Letters" (titled "History" for HR and above).
Policies grid	One card per policy: the title, the full text preserving its line breaks, and a footer reading "v{version} · updated by {name}".
My Letters table	Columns: Letter Type, Generated By, Date, and a view icon. HR and above also see an Employee column.
Empty state	"No documents have been issued to you yet." for an employee; "No letters generated yet." for HR.
Letter dialog	A print-ready letter on the company's letterhead: the document title, the recipient block, a subject line, the salutation, the body, a details table, the closing, the signature block and a reference line.

3. Icons & Buttons

Icon / control	Label	What it does
Eye	—	Opens the letter.
Download	Download PDF	Saves the letter as {type}_letter_{employee code}.pdf.

4. How to Use

1. Open Portal → Documents.
2. On the Policies tab, read any policy in full — the card shows the whole text.
3. Switch to My Letters for anything HR has issued to you.
4. Click the eye icon on a row to open the letter.
5. Click Download PDF to save it.

5. User Actions

Action	Where / how
Read a policy	The Policies tab.
Open a letter issued to you	My Letters → the eye icon.
Save a letter	Download PDF.

6. Expected Result

After this action	The application does this
A letter is opened	The formal letter is drawn with its reference number, details table and signature block.
Download PDF is clicked	A PDF is saved, named for the letter type and your employee code.
The PDF cannot be generated	"Could not generate PDF".
Nothing has been issued to you	"No documents have been issued to you yet."

7. Block Diagram

8. Workflow

A letter is opened and, if wanted, downloaded as a PDF

END · The document is read or saved

SCREEN 8.21 · PORTAL — TASKS & TASK DETAIL

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - TASKS SCREEN (PORTAL)]

Insert TASKS SCREEN (PORTAL) screenshot here.

1. Purpose

The full task record: status, priority, progress, description, checklist and comment thread. Which of these you may change depends on your role and on whether the task is assigned to you.

2. UI Components

UI element	What it shows
List heading	"Tasks" with "{total} tasks" beneath it.
Status filter	All statuses / Assigned / In Progress / Review / Completed.
Table columns	Task, Project, Assignee, Priority, Due Date, Progress, Status, and an action column for manager-tier roles.
Priority badges	high (red), medium (amber), low (neutral).
Status badges	assigned (neutral), in progress (amber), review (default), completed (green).
Empty state	"No tasks found."
Detail dialog	The task title as the heading, then priority, status, due date, a progress bar, the description, the project and assignee, the checklist and the comments.
Checklist	"Checklist ({done}/{total})" with a checkbox per item, struck through when done, and a field to add another.
Comments	Each comment shows its author, the time and the body. Empty state: "No comments yet."

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Task	Creates a task. Manager-tier roles only.
Trash	—	Deletes a task, after a confirmation reading Delete task "{title}"? Manager-tier roles only.
Checkbox	—	Marks a checklist item done or not done.
Plus (checklist)	—	Adds a checklist item. Disabled until text is entered.
Send	—	Posts a comment. Disabled until text is entered.

Icon / control	Label	What it does
Status dropdown	—	Changes the task's status. Available to anyone who can open the task.
Progress dropdown	—	Sets progress in steps of ten. Available to the assignee only.

4. How to Use

1. Open Portal → Tasks, or click a card in the dashboard Kanban.
2. Filter by status if the list is long.
3. Click the task row to open it.
4. Change the status as the work moves along.
5. If the task is assigned to you, set the progress percentage.
6. Tick checklist items as they are finished.
7. Type in the comment box and press Enter, or click send, to leave a note.

5. User Actions

Action	Where / how
Move a task along	The status dropdown.
Report progress	The progress dropdown — assignee only.
Work the checklist	Tick, add or delete items.
Discuss the task	The comment box.
Reassign or re-scope	Priority, Project and Assignee — manager-tier roles only.

6. Expected Result

After this action	The application does this
The status is changed	"Status updated", or "Could not update status".
Progress is set	"Progress updated", or "Could not update progress".
The assignee is changed	"Assignee updated", or "Could not update assignee".
The project is changed	"Project updated", or "Could not update project".
The priority is changed	"Priority updated", or "Could not update priority".
A checklist item is added or ticked	The task refreshes silently — no message.
A comment is posted	The box clears and the comment appears in the thread.
A task is deleted	"Task deleted", or "Could not delete task".

PERMISSION HERE IS PER FIELD

Anyone may move a task along the board. Only a manager-tier role may re-scope it — change its priority, project or

assignee. Only the assignee may report a completion percentage. This is enforced by a single database function, not by the form.

SCREEN 8.22 · PORTAL — PROJECTS & PROJECT DETAIL

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - PROJECTS SCREEN (PORTAL)]

Insert PROJECTS SCREEN (PORTAL) screenshot here.

1. Purpose

The project list and the full project record — overview, members and the tasks inside it. Creating and editing a project, and managing its membership, are Project Manager and above.

2. UI Components

UI element	What it shows
List heading	"Projects" with "{total} projects" beneath it.
Search	"Search projects..."
Status filter	All statuses / Planning / Active / On Hold / Completed.
Table columns	Project, Priority, Status, Progress, Deadline, Members.
Empty state	"No projects yet."
Pagination	"Page {n} of {m}" with previous and next arrows, ten projects to a page.
Detail header	A back arrow, the project name, the priority and status badges, "Due {deadline}", "{progress} % complete" and an Edit button for managers.
Detail tabs	Overview (description and tech stack), Members (the roster), Tasks (the task list filtered to this project).
Members empty state	"No members assigned yet."

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Project	Creates a project. Project Manager and above.
Pencil	Edit	Edits the project. Project Manager and above.
Back arrow	—	Returns to the project list.
User-plus	Add	Adds the selected employee as a member. Project Manager and above.
Cross	—	Removes a member. Project Manager and above.

4. How to Use

1. Open Portal → Projects.

2. Search or filter by status to find the project.
3. Click the row to open it.
4. Read the Overview tab for the description and the technologies in use.
5. Open the Members tab to see who is on it.
6. Open the Tasks tab for every task inside this project.

5. User Actions

Action	Where / how
Find a project	Search, or filter by status.
Open a project	Click its row.
See the team	The Members tab.
See the work	The Tasks tab.
Edit the project or its membership	Edit, Add and the cross — Project Manager and above.

6. Expected Result

After this action	The application does this
A project is opened	Its detail page loads on the Overview tab.
A member is added	"Member added" and the roster refreshes.
A member is removed	"Member removed".
Adding a member fails	"Could not add member".
A project has no description	"No description provided." and "Not specified" for the tech stack.

SCREEN 8.23 · PORTAL — CALENDAR

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - CALENDAR SCREEN (PORTAL)]

Insert CALENDAR SCREEN (PORTAL) screenshot here.

1. Purpose

A month grid of everything scheduled — meetings, events, holidays, leave, task due dates, project deadlines and birthdays — with a summary of whichever day is selected.

2. UI Components

UI element	What it shows
Heading	"Calendar", with a New Event button for Team Lead and above.
Selected-day card	The full date, and a list of that day's entries as coloured chips with their titles. Empty: "No events on this day."
Month navigation	"{Month} {Year}" with previous and next arrows.
Month grid	Sunday to Saturday headers, one cell per day. Today is a filled circle. Each cell shows up to two entry chips and "+{n} more" beyond that. The selected day carries a ring.
Legend	A coloured dot and label for each entry type.
Entry types & colours	Meeting (primary), Event (green), Holiday (red), Leave (amber), Task due (grey), Project deadline (red), Birthday (green).

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Event / Add Event	Creates a calendar entry. Team Lead and above.
Chevron left / right	—	Moves to the previous or next month.
Day cell	—	Selects that day and fills the summary card.

4. How to Use

1. Open Portal → Calendar.
2. Use the arrows beside the month name to move between months.
3. Click any day to see everything on it in the summary card above.
4. Read the legend at the foot to interpret the chip colours.
5. To add a meeting, an event or a holiday, click New Event — Team Lead and above.

5. User Actions

Action	Where / how
Change month	The arrows beside the month name.
Inspect a day	Click its cell.
Add an entry	New Event or Add Event — Team Lead and above.

6. Expected Result

After this action	The application does this
A month is opened	Every entry for that month is drawn into the grid.
A day is selected	The summary card lists that day's entries.
A day is empty	"No events on this day."
A day has more than two entries	"#{n} more" is shown in the cell; select the day to see them all.

7. Block Diagram

SCREEN 8.24 · PORTAL — ANNOUNCEMENTS

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - ANNOUNCEMENTS SCREEN (PORTAL)]

Insert ANNOUNCEMENTS SCREEN (PORTAL) screenshot here.

1. Purpose

The company announcement feed in full. Everyone reads; HR and above post, pin, edit and delete.

2. UI Components

UI element	What it shows
Heading	"Announcements", with a New Announcement button for HR and above.
Announcement cards	A pin icon where pinned, the title, a category badge, the body preserving its line breaks, and a footer reading "{author} · {date}".
Category badges	news (green), holiday (amber), event (default), general (neutral).
Empty state	A megaphone icon and "No announcements yet."

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Announcement	Posts an announcement. HR and above.
Pin	—	Marks an announcement as pinned.
Pencil	—	Edits an announcement. HR and above.
Trash	—	Deletes an announcement, after a confirmation. HR and above.
Megaphone	—	Decorative, in the empty state.

4. How to Use

1. Open Portal → Announcements.
2. Read down the feed. Pinned items carry a pin icon.
3. Use the category badge to tell news from a holiday notice.
4. To post one, click New Announcement — HR and above only (Screen 9.13).

5. User Actions

Action	Where / how
Catch up on company news	Read the feed.

Action	Where / how
Post, edit or delete	The Plus, Pencil and Trash icons — HR and above.

6. Expected Result

After this action	The application does this
The page opens	Announcements are listed with pinned ones flagged.
An announcement is deleted	"Announcement removed", or "Could not remove announcement".
Nothing has been posted	The megaphone empty state.

7. Block Diagram

8. Workflow

SCREEN 8.25 · PORTAL — MESSAGES

Module	In-app Portal	Available to	Every role
--------	---------------	--------------	------------

[SCREENSHOT PLACEHOLDER - MESSAGES SCREEN (PORTAL)]

Insert MESSAGES SCREEN (PORTAL) screenshot here.

1. Purpose

The same private one-to-one conversations as the Messages tab, laid out for a wider screen: the list of people on the left, the open conversation on the right.

2. UI Components

UI element	What it shows
Heading	"Messages", with the line "Direct, one to one. Only you and the person you are writing to can read a conversation."
Left pane — conversations	Each row shows initials, the name, the time of the last message, a preview and an unread count pill.
Left pane — contact picker	A "Search people" box, a Cancel button and the list of colleagues with their designation and department. Empty: "No one matches that."
Right pane	The other person's name in the header, the message bubbles, and the composer at the foot.
Message bubbles	Yours right-aligned in the brand colour, theirs left-aligned in grey, each with a timestamp and "· read" on your own once opened.
Composer	A text field capped at 2 000 characters with a send button.
Empty states	"No conversations yet. Start one with New message." · "Nothing yet — write the first message." · "Pick a conversation, or start a new one. Messages here are private to the two of you — nobody else in the company can read them."

3. Icons & Buttons

Icon / control	Label	What it does
Message-square-plus	New message	Switches the left pane to the contact picker.
Search	—	Filters the contact list.
Send	—	Sends the message. Disabled until something is typed.
Unread pill	—	The number of unread messages in that conversation.

4. How to Use

1. Open Portal → Messages.
2. Click a conversation on the left, or click New message and pick somebody.

3. Type in the box at the foot of the right pane.
4. Press Enter to send, or Shift + Enter for a new line.
5. Opening a conversation marks it read and clears its badge.

5. User Actions

Action	Where / how
Open a conversation	Click its row.
Start a new one	New message, then choose a colleague.
Send	Enter, or the send button.
Add a line break	Shift + Enter.

6. Expected Result

After this action	The application does this
A conversation is opened	Its messages load and everything received is marked read.
A message is sent	It appears in your own bubble; the box clears.
A message cannot be sent	"Could not send the message" and the text is kept.
A reply arrives	The conversation refreshes within about ten seconds; the list refreshes within fifteen.
You have no conversations	"No conversations yet. Start one with New message."

7. Block Diagram

8. Workflow

START · Portal → Messages

9 HR Module

Everything the HR Admin adds on top of the employee baseline in Section 8. Every screen here is also available to the Founder and the Company Admin, who are treated identically to HR by every rule in the database and then given company-level control on top — Section 10.

Group	Screens	Where
On the phone	9.1 Leave approvals · 9.2 Reporting Manager · 9.19 Generate a letter	Modules tab
People	9.3 Employee list · 9.4 Add / Edit Employee · 9.5 Employee profile	Portal tab
Time & leave	9.6 Team attendance · 9.7 Leave approvals · 9.8 All-leaves register	Portal tab
Pay	9.9 Payroll run · 9.10 Salary structures	Portal tab
Documents	9.11 Policy management · 9.12 Generate letter	Portal tab
Operations	9.13 Assets · 9.14 Recruitment · 9.15 Post an announcement	Portal tab
Oversight	9.16 Reports · 9.17 Departments & designations · 9.18 Roles, email and audit	Portal tab

WHAT HR CANNOT DO

Two things are withheld from the HR Admin and given only to the Founder and the Company Admin: editing the company profile (name and address), and verifying a company bank account. Both are documented in Section 10.

SCREEN 9.1 · LEAVE APPROVALS (MOBILE)

Module	Mobile app — native	Available to	Founder · Company Admin · HR Admin
--------	---------------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - LEAVE APPROVAL SCREEN]

Insert LEAVE APPROVAL SCREEN screenshot here.

1. Purpose

The same Leaves module an employee sees (Screen 8.3), but carrying the whole company's requests and offering Approve and Reject on every pending row. This is how leave gets decided away from a desk.

2. UI Components

UI element	What it shows
Header	⌵ Back, "Leaves", and the green Apply button — an approver applies for their own leave through the same button.
Row title	The leave type.
Row subtitle	The employee's name and the dates — "Priya Nair · 12 Sep–14 Sep".
Row right-hand value	The number of days.
Row badge	pending (amber), approved (green), rejected (red).
Action sheet	Opened by tapping a pending row: Approve, Reject (red) and Cancel.
Note sheet	Opened after Approve or Reject — Screen 7.10.

3. Icons & Buttons

Icon / control	Label	What it does
Row tap	—	Opens the action sheet on a pending row.
Approve	Approve	Opens the note sheet; the note is optional.
Reject	Reject (red)	Opens the note sheet; at least ten characters are required.
Cancel	Cancel	Closes the sheet without deciding.

4. How to Use

1. Open Modules and tap the amber Leaves tile.
2. Look for amber pending badges — those are the requests waiting on you.
3. Read the row: the type, who asked, the dates and how many days.
4. Tap the row.
5. Tap Approve or Reject.

6. Write the note. On an approval it is optional and useful — "cover arranged with Arjun". On a rejection it is required, and the employee reads it.
7. Tap Send. The list re-reads and the badge changes.

5. User Actions

Action	Where / how
Find what is waiting	Search for "pending", or scan for amber badges.
Approve a request	Tap the row → Approve → write a note → Send.
Reject a request	Tap the row → Reject → write at least ten characters → Send.
Apply for your own leave	The green Apply button, exactly as an employee does.

6. Expected Result

After this action	The application does this
A request is approved	The badge turns green and the leave is deducted from the employee's balance. Your note appears on their own request.
A request is rejected	The badge turns red and your reason replaces the dates in the subtitle of their row — the reason is what they opened the list to read.
Fewer than ten characters on a rejection	Send stays disabled.
The decision is refused	"Not done" with the database's reason — most often that this caller is not permitted to decide this request.
A request is already decided	Tapping it offers nothing. A decision is made once.

THE REJECTION NOTE IS NOT OPTIONAL BY ACCIDENT

A refusal that explains itself saves the employee coming to ask, and gives them something to act on — a different week, a handover to arrange. Ten characters is the floor the portal applies too, so the two front ends behave the same way.

7. Block Diagram

decide_leave_request()

re-checks who may decide

8. Workflow

SCREEN 9.2 · REPORTING MANAGER

Module	Mobile app — native	Available to	Founder · Company Admin · HR Admin
--------	---------------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - REPORTING MANAGER SCREEN]

Insert REPORTING MANAGER SCREEN screenshot here.

1. Purpose

Who reports to whom across the whole company, grouped by manager — and, more usefully, which people have no reporting manager set at all.

2. UI Components

UI element	What it shows
Header	"Reporting Manager", ‹ Back at the left.
Search	"Search reporting manager".
Row title	The manager's name.
Row subtitle	The names of everyone reporting to them, comma-separated. Where there are none: "no reports".
Row right-hand value	The team size.
Row badge	The manager's designation. Where a group has no manager, an amber "unassigned" badge instead.
Empty state	"No employees to report on."
Visibility	The tile is not shown at all to Project Manager, Team Lead, Employee or Accounts Manager.

3. Icons & Buttons

Icon / control	Label	What it does
‹ Back	Back	Returns to the module grid.

4. How to Use

1. Open Modules and tap the indigo Reporting Manager tile.
2. Read down the list — one row per manager, with their reports named beneath.
3. Look for the amber "unassigned" badge. That row is the finding: those people have no reporting manager set.
4. To fix it, open Portal → Employees, edit the person and set their Reporting manager.

5. User Actions

Action	Where / how
See a manager's team	Read their row.
Find people with no manager	Look for the amber "unassigned" badge, or search for "unassigned".
Set a manager	Portal → Employees → edit the person → Reporting manager.

6. Expected Result

After this action	The application does this
The module opens	Every manager in the company is listed with their reports and their team size.
Somebody has no manager	They appear under an "unassigned" row, badged amber — the colour of a finding, not a statistic.
The role is not permitted	The tile is not shown. If the request were made anyway, the database would refuse it.

WHY THIS IS AN AGGREGATE, NOT A TABLE

There is no table that holds "who reports to whom, grouped". It is computed by a function that re-checks for an HR-level role before it reads a single row — which is why the tile is offered only to HR, the Founder and the Company Admin.

7. Block Diagram

PRESENTATION

Manager · reports · team size · designation

FILTERING

Tile shown only to founder, company_admin, hr_admin

API LAYER

POST /rpc/report_reporting_manager

RULES

The reporting structure is computed by the database

SCREEN 9.3 · PORTAL — EMPLOYEE MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - EMPLOYEE MANAGEMENT SCREEN]

Insert EMPLOYEE MANAGEMENT SCREEN screenshot here.

1. Purpose

The searchable, filterable, sortable directory of every employee, with add, edit and remove. Non-managers see the same page reduced to two columns and no controls.

2. UI Components

UI element	What it shows
Heading	"Employees" with "{total} team members" beneath it.
Search	"Search by name, email or employee code..."
Department filter	A dropdown defaulting to "All departments".
Table columns (manager view)	Employee (avatar, name, email), Department, Designation, Address, Joined, Status, Actions.
Table columns (non-manager view)	Employee and Designation only.
Status badges	active (green), on notice (amber), inactive (neutral), exited (red).
Sorting	Employee and Joined are sortable — click the header to reverse the order.
Loading state	Five skeleton rows.
Empty state	"No employees match your filters."
Pagination	"Page {n} of {m}" with previous and next arrows, ten to a page.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Add Employee	Opens the Add Employee dialog — Screen 9.4.
Up-down arrows	—	Sorts by that column.
Pencil	—	Opens that person's profile.
Trash (red)	—	Removes the employee, after a confirmation reading Remove {name}? Not offered on your own row.
Chevron left / right	—	Moves between pages.

4. How to Use

1. Open Portal → Employees.
2. Search by name, email or employee code, or filter by department.
3. Click a column header to sort by name or by joining date.
4. Click a row to open that person's full profile.
5. Click Add Employee to create a new person and their login in one step.
6. Click the red trash icon to remove somebody, and confirm.

5. User Actions

Action	Where / how
Find a person	Search or filter.
Sort the list	Click the Employee or Joined header.
Open a record	Click the row.
Add a person	Add Employee.
Remove a person	The trash icon, then confirm.

6. Expected Result

After this action	The application does this
An employee is removed	"Employee removed" and the list refreshes.
Removal fails	"Could not remove employee".
Nothing matches the filters	"No employees match your filters."
A non-manager opens the page	Two columns only — Employee and Designation. No Add, no Edit, no Delete, and no Address, Joined or Status columns.

YOU CANNOT DELETE YOUR OWN ACCOUNT

The trash icon is not offered on the signed-in person's own row.

7. Block Diagram

8. Workflow

SCREEN 9.4 · PORTAL — ADD / EDIT EMPLOYEE

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - ADD EMPLOYEE SCREEN]

Insert ADD EMPLOYEE SCREEN screenshot here.

1. Purpose

Creates a person, their login and their role in a single step, or edits an existing record. This is the only place in the system where an account is created.

2. UI Components

UI element	What it shows
Title	"Add Employee" when creating, "Edit Employee" when changing an existing record.
Personal fields	First name (required), Last name (optional), Email (locked when editing), Temporary password (creating only), Phone, Joining date, Address, Date of birth, Gender (Male / Female / Other).
Employment fields	Department, Designation, Reporting manager ("No reporting manager" plus every other employee, shown as name — designation).
Role	Founder · HR Admin · Project Manager · Team Lead · Employee.
Status	Active · Inactive · On Notice · Exited.
Identity & Bank Details	PAN number (e.g. ABCDE1234F), Aadhaar number (12 digits), Bank name, Bank account number, Bank IFSC code (e.g. HDFC0001234).
Buttons	Cancel (outlined) and "Add employee" or "Save changes", with a spinner while submitting.

3. Icons & Buttons

Icon / control	Label	What it does
Cancel	Cancel	Closes without saving.
Add employee / Save changes	—	Creates or updates the record.

4. How to Use

1. Open Portal → Employees and click Add Employee.
2. Fill the first name, the email and a temporary password of at least eight characters.
3. Set the joining date, the department and the designation.
4. Choose the reporting manager.
5. Choose the role — this is what decides everything the person will be able to reach.
6. Set the status to Active.

7. Fill the Identity & Bank Details if payroll will run for this person.
8. Click Add employee. Tell them their temporary password and ask them to change it at their first sign-in.

5. User Actions

Action	Where / how
Create a person and their login	Add Employee, fill the form, submit.
Change somebody's role	Open their record, change the Role dropdown, save.
Put somebody on notice	Change Status to On Notice.
Record identity and bank details	The Identity & Bank Details section.

6. Expected Result

After this action	The application does this
An employee is created	"Employee added", the dialog closes and the list refreshes. A login is created at the same time.
An employee is updated	"Employee updated".
Something is wrong with the form	"Something went wrong. Please check the form and try again."
The first name is missing	"First name is required".
The email is malformed	"Enter a valid email".
No role is chosen	"Role is required".
The PAN is malformed	"Invalid PAN format (e.g. ABCDE1234F)".
The Aadhaar is not twelve digits	"Aadhaar must be 12 digits".
The IFSC is malformed	"Invalid IFSC format (e.g. HDFC0001234)".
The temporary password is too short	"Minimum 8 characters".

THE TEMPORARY PASSWORD

It is set here and shown to nobody afterwards. Give it to the person directly and tell them to change it at Portal → Profile → Change password on their first sign-in.

CREATING AN EMPLOYEE NEEDS THE ACCOUNT SERVICE

Creating a login is the one privileged operation in the system. If the account-creation service has not been deployed, everything else works but adding a new employee will fail.

7. Block Diagram

8. Workflow

SCREEN 9.5 · PORTAL — EMPLOYEE PROFILE

Module	In-app Portal	Available to	Every role (with reduced content below HR)
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - EMPLOYEE DETAILS SCREEN]

Insert EMPLOYEE DETAILS SCREEN screenshot here.

1. Purpose

One person's full record: who they are, what they do, and — for HR and above — their identity and bank details.

2. UI Components

UI element	What it shows
Header	A back arrow and "Employee Profile".
Summary card	The avatar with a camera overlay for managers, the full name, the designation and department, the status badge and the employee code.
Tabs	Overview · Employment · Documents · Attendance · Leaves · Performance.
Overview tab	Email, Phone, Address, Date of birth, Reporting manager, Experience, and Skills as badges — or "No skills recorded".
Employment tab	Employee code, Department, Designation, Joining date; and, for HR and above only, an Identity & Bank Details section holding PAN number, Aadhaar number, Bank name, Bank account number and Bank IFSC code.
Documents / Attendance / Leaves / Performance tabs	Placeholders in this release, headed Document management, Attendance history, Leave history and Performance history.
Status badges	active (green), on notice (amber), inactive (neutral), exited (red).

3. Icons & Buttons

Icon / control	Label	What it does
Back arrow	—	Returns to the employee list.
Camera	Change photo	Uploads a new profile photograph. HR and above only.
Pencil	Edit	Opens the Add / Edit Employee dialog for this person. HR and above only.

4. How to Use

1. Open Portal → Employees and click a row.
2. Read the Overview tab for contact details, reporting line and skills.
3. Open the Employment tab for the employment record and, as HR, the identity and bank details.
4. Click Edit to change anything.

- Click the camera on the avatar to replace the photograph.

5. User Actions

Action	Where / how
Look up a colleague's details	The Overview tab.
Check PAN, Aadhaar or bank details	The Employment tab — HR and above only.
Edit the record	Edit.
Change the photograph	The camera overlay on the avatar.

6. Expected Result

After this action	The application does this
A photograph is uploaded	"Photo updated".
The upload fails	"Could not upload photo".
A non-manager opens the page	No camera overlay, no Edit button, and no Identity & Bank Details section at all.
A field has never been set	It shows an em dash.

HOW PAN, AADHAAR AND BANK DETAILS ARE PROTECTED

These columns are withheld from the employee table entirely — they cannot be read from it at any role. A dedicated function is the only way to reach them, and it returns them to HR-level roles and to the employee themselves. Hiding the section in the interface is the least of the protections here.

7. Block Diagram

8. Workflow

SCREEN 9.6 · PORTAL — TEAM ATTENDANCE

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - TEAM ATTENDANCE SCREEN]

Insert TEAM ATTENDANCE SCREEN screenshot here.

1. Purpose

The whole company's attendance for any one day, with the totals that matter at a glance: present, absent and on leave.

2. UI Components

UI element	What it shows
Tab	"Team", beside "My Attendance". Shown only to the Founder, the Company Admin and the HR Admin.
Date picker	Choose the day to look at. Defaults to today.
Summary line	"Present {n}", "Absent {n}", "On Leave {n}" for the chosen date.
Team table	Columns: Employee, Check In, Check Out, Working Hours, Status.
Status badges	present (green), half day (amber), on leave (neutral), absent (red), plus a separate amber "Late" badge.
Empty state	"No one has checked in for this date yet."

3. Icons & Buttons

Icon / control	Label	What it does
Date field	—	Changes the day shown.

4. How to Use

1. Open Portal → Attendance.
2. Click the Team tab.
3. Set the date. It opens on today.
4. Read the summary line for the day's totals.
5. Scan the table for late arrivals and missing check-outs.

5. User Actions

Action	Where / how
Check today's floor	Open the Team tab.
Look at a past day	Change the date.

Action	Where / how
Spot late arrivals	The amber "Late" badges.
Spot missing check-outs	An em dash in the Check Out column.

6. Expected Result

After this action	The application does this
A date is chosen	Every punch for that date is listed with the day's totals above it.
Nobody has punched	"No one has checked in for this date yet."
Somebody is on leave	A neutral "on leave" badge and no times.
A non-HR role opens Attendance	The Team tab is not shown at all.

7. Block Diagram

8. Workflow

END · The day's floor is understood

SCREEN 9.7 · PORTAL — LEAVE APPROVALS

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - LEAVE APPROVAL SCREEN (PORTAL)]

Insert LEAVE APPROVAL SCREEN (PORTAL) screenshot here.

1. Purpose

Every pending leave request in the company, with a decision dialog that makes the reason for a refusal a required part of the decision.

2. UI Components

UI element	What it shows
Tab	"Approvals", with a badge showing how many requests are pending. Founder, Company Admin and HR Admin only.
Table columns	Employee, Type, Dates, Days, Reason, Actions.
Empty state	"No pending requests."
Decision dialog title	"Approve leave" or "Reject leave".
Dialog description	"{employee} · {leave type} · {start} → {end} ({n} days)".
Their reason	Shown in its own box when the employee supplied one.
Note field	Labelled "Note (optional)" on an approval and "Why are you rejecting this?" on a rejection. Capped at 500 characters with a live counter.
Placeholders	Approve: "Anything they should know — cover arrangements, handover, dates confirmed." · Reject: "Two people are already off that week. Could you take the following Monday instead?"
Helper text	"They will see this on their request." · on a rejection, "They will see this on their request, so write it to them."

3. Icons & Buttons

Icon / control	Label	What it does
Check (green)	—	Opens the Approve dialog for that row.
Cross (red)	—	Opens the Reject dialog for that row.
Cancel	Cancel	Closes the dialog without deciding.
Approve / Reject	—	Confirms the decision. Disabled while a rejection note is under ten characters.

4. How to Use

1. Open Portal → Leaves and click the Approvals tab. The badge tells you how many are waiting.
2. Read the row: who, what type, which dates, how many days and their reason.
3. Click the green tick to approve or the red cross to reject.
4. Read their reason in the dialog, then write your note.
5. Click Approve or Reject.

5. User Actions

Action	Where / how
See what is waiting	The Approvals tab and its count badge.
Approve	The green tick, then a note, then Approve.
Reject	The red cross, then at least ten characters, then Reject.

6. Expected Result

After this action	The application does this
A request is approved	"Leave approved" and the row leaves the pending list.
A request is rejected	"Leave rejected — they will see your note".
An approval fails	"Could not approve leave".
A rejection fails	"Could not reject leave".
Fewer than ten characters on a rejection	"Please give at least 10 characters — they will read this." and the button stays disabled.
Nothing is pending	"No pending requests."

SCREEN 9.8 · PORTAL — ALL LEAVES REGISTER

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - ALL LEAVES REGISTER SCREEN]

Insert ALL LEAVES REGISTER SCREEN screenshot here.

1. Purpose

A month-by-month register of every employee's leave, with per-person day totals and a CSV export — the screen HR uses to close out a month.

2. UI Components

UI element	What it shows
Tab	"All Leaves". Founder, Company Admin and HR Admin only.
Filters	Month (a month picker), Employee (default "All employees"), Status (All statuses / Pending / Approved / Rejected).
All months	A button that clears the month filter, shown only while a month is selected.
Stat tiles	Requests · Days approved · Pending · Employees.
By employee	Name-and-total chips, shown when no single employee is filtered, with the note "(rejected requests excluded)".
Table columns	Employee, Type, Dates, Days, Reason, Status, Decided by, Note.
Empty state	"No leave records match these filters."

3. Icons & Buttons

Icon / control	Label	What it does
Download	Export CSV	Downloads the filtered rows as leaves-{month}.csv, or leaves-{month}-employee-{id}.csv when one person is filtered. Disabled when nothing matches.
All months	All months	Clears the month filter.

4. How to Use

1. Open Portal → Leaves and click the All Leaves tab.
2. Choose the month you are closing.
3. Leave the employee filter on "All employees" to see the whole company, or pick one person.
4. Set the status filter to Approved if you are counting days taken.
5. Read the stat tiles and the per-employee chips for the totals.
6. Click Export CSV to hand the figures to payroll or to your accountant.

5. User Actions

Action	Where / how
Close a month	Filter to the month, read the totals, export.
Audit one person's leave	Filter to that employee.
Count days actually taken	Set the status filter to Approved.
Export	Export CSV.

6. Expected Result

After this action	The application does this
A month is chosen	Every request in that month is listed with the four totals above it.
Export CSV is clicked	A CSV downloads, named for the month and, where filtered, the employee.
Nothing matches	"No leave records match these filters." and the export button is disabled.
Per-employee totals are shown	Rejected requests are excluded from them, as the note states.

7. Block Diagram

8. Workflow

SCREEN 9.9 · PORTAL — PAYROLL RUN

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - PAYROLL RUN SCREEN]

Insert PAYROLL RUN SCREEN screenshot here.

1. Purpose

Generates every employee's payslip for a chosen month, and shows the payout summary for that run.

2. UI Components

UI element	What it shows
Section	"Payroll Run". Founder, Company Admin and HR Admin only.
Month and year	Two dropdowns — January to December, and the current year either side.
Four stat cards	Employees Paid · Total Payout · Total Deductions · Total Gross, all in rupees with Indian grouping and no decimals.
Table columns	Employee, Gross Pay, Net Pay, and a view icon.
Empty state	"No payslips generated for this month yet."

3. Icons & Buttons

Icon / control	Label	What it does
Play	Generate Payroll	Generates payslips for every employee for the chosen month and year.
Eye	—	Opens that employee's payslip.

4. How to Use

1. Make sure every employee has a salary structure — Screen 9.10.
2. Open Portal → Payroll.
3. Choose the month and the year.
4. Click Generate Payroll.
5. Read the four summary cards to confirm the totals.
6. Open any payslip with the eye icon to check it before the run is released.

5. User Actions

Action	Where / how
Run payroll for a month	Set the month and year, click Generate Payroll.
Check the totals	The four stat cards.

Action	Where / how
Inspect a payslip	The eye icon on its row.

6. Expected Result

After this action	The application does this
Payroll is generated	"Generated {n} payslip(s)" and the summary and the table refresh.
The run fails	"Could not generate payroll".
No payroll has been run for the month	"No payslips generated for this month yet."
An employee has no salary structure	They are not paid in that run. Set the structure and run again.

ORDER OF OPERATIONS

Salary structures first, then the payroll run. A person with no structure produces no payslip, and the four summary cards will not add up to what you expect until every structure is in place.

7. Block Diagram

8. Workflow

SCREEN 9.10 · PORTAL — SALARY STRUCTURES

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - SALARY STRUCTURE SCREEN]

Insert SALARY STRUCTURE SCREEN screenshot here.

1. Purpose

Each employee's basic pay, allowances and statutory percentages — the figures every payslip is computed from.

2. UI Components

UI element	What it shows
Section	"Salary Structures". Founder, Company Admin and HR Admin only.
Table columns	Employee, Department (an em dash where none is set), and an edit icon.
Dialog title	"Salary Structure — {employee name}".
Fields	Basic · HRA · Special allowance · PF % (12 by default) · ESI % (0.75 by default) · Effective from.
Buttons	Cancel and Save, with a spinner while saving.

3. Icons & Buttons

Icon / control	Label	What it does
Pencil	—	Opens the salary structure for that employee.
Save	Save	Writes the structure.

4. How to Use

1. Open Portal → Payroll and scroll to Salary Structures.
2. Click the pencil beside the employee.
3. Enter the basic pay, the house rent allowance and the special allowance.
4. Check the PF and ESI percentages — 12 % and 0.75 % are the defaults.
5. Set the date the structure takes effect from.
6. Click Save. Repeat for everyone before running payroll.

5. User Actions

Action	Where / how
Set a new structure	The pencil, fill the fields, Save.
Give somebody a rise	Open their structure, change the figures, set a new effective date, Save.

6. Expected Result

After this action	The application does this
A structure is saved	"Salary structure saved" and the payroll figures refresh.
Saving fails	"Could not save salary structure".
A required field is empty	"Required" under it.
A revision is saved	The change is versioned, so the history of what somebody was paid and from when is kept.

7. Block Diagram

salary_structure_detail

8. Workflow

START · Portal → Payroll → Salary Structures

An employee's structure is opened

Basic, allowances, PF %, ESI % and the effective date are set

◆ **Are all fields filled?**

YES

"Salary structure saved"

NO

"Required" under the empty field

The revision is recorded, so past pay periods remain accurate.

END · The employee can be paid

SCREEN 9.11 · PORTAL — POLICY MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - POLICY MANAGEMENT SCREEN]

Insert POLICY MANAGEMENT SCREEN screenshot here.

1. Purpose

Writing, revising and withdrawing the HR policies every employee reads on the Policies tab and in the native Policies module.

2. UI Components

UI element	What it shows
Tab	"Policies" on the Documents page.
Policy cards	One per policy: the title, the full text preserving its line breaks, and a footer reading "v{version} · updated by {name}".
Dialog title	"New Policy" or "Edit Policy".
Fields	Title (required) and Content (an eight-row text area, required).
Buttons	Cancel and Save.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Policy	Creates a policy. HR and above.
Pencil	—	Edits a policy.
Trash	—	Deletes a policy, after a confirmation reading Remove "{title}"?

4. How to Use

1. Open Portal → Documents and stay on the Policies tab.
2. Click New Policy.
3. Give it a clear title — this is what appears in the native Policies module.
4. Write the content. Line breaks are preserved exactly as typed.
5. Click Save. Everyone can read it immediately.
6. To revise it, click the pencil. The version number rises so employees can see it has changed.

5. User Actions

Action	Where / how
Publish a policy	New Policy, fill it, Save.

Action	Where / how
Revise a policy	The pencil, change it, Save.
Withdraw a policy	The trash icon, then confirm.

6. Expected Result

After this action	The application does this
A policy is created	"Policy created" and it appears for everyone.
A policy is revised	"Policy updated" and its version number rises.
Saving fails	"Could not save policy".
A policy is deleted	"Policy removed", or "Could not remove policy".

7. Block Diagram

8. Workflow

END · Everyone can read the current version

SCREEN 9.12 · PORTAL — GENERATE LETTER

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - GENERATE LETTER SCREEN]

Insert GENERATE LETTER SCREEN screenshot here.

1. Purpose

Produces a formal letter or certificate on the company letterhead, for any employee, in five standard forms.

2. UI Components

UI element	What it shows
Tab	"Generate Letter". Founder, Company Admin and HR Admin only.
Employee	A searchable dropdown of every employee.
Letter type	Offer Letter · Appointment / Joining Letter · Experience Letter · Relieving Letter · Certificate of Employment.
Conditional fields	For an Offer or an Appointment letter only: Annual CTC (optional — "Leave blank to use the employee's configured salary structure, if any."), Probation (default "Six months from the date of joining") and Notice period (default "Thirty days on either side after confirmation").
Custom message	An optional text area added to the letter in italics.
History	Every letter generated, with columns Employee, Letter Type, Generated By, Date and a view icon.

3. Icons & Buttons

Icon / control	Label	What it does
File-text	Generate	Produces the letter and opens it immediately.
Eye	—	Reopens a letter from the history.
Download	Download PDF	Saves it as {type}_letter_{employee code}.pdf.

4. How to Use

1. Open Portal → Documents and click the Generate Letter tab.
2. Choose the employee.
3. Choose the letter type.
4. For an offer or appointment letter, set the CTC, probation and notice period — or leave them to use the configured salary structure and the standard wording.
5. Add a custom message if the letter needs one.
6. Click Generate. The letter opens straight away.
7. Click Download PDF and send it on.

5. User Actions

Action	Where / how
Issue an offer letter	Employee → Offer Letter → CTC and terms → Generate.
Issue an experience or relieving letter	Employee → the type → Generate.
Reissue a letter	The History tab → the eye icon → Download PDF.

6. Expected Result

After this action	The application does this
A letter is generated	It opens immediately, formatted on the letterhead with its reference number, and is added to the history.
Generation fails	"Could not generate letter".
Download PDF is clicked	A PDF is saved, named for the type and the employee code.
The employee opens their portal	The letter appears under Documents → My Letters.

WHAT EACH LETTER CONTAINS

Offer: designation, department, date of joining, annual CTC, probation, notice period, and an acceptance block to countersign. · Appointment: the same plus the employee code. · Experience: employee code, period of service, last designation, employment type. · Relieving: employee code, period of service, last designation, and the date relieved. · Certificate of Employment: addressed "To Whomsoever It May Concern", with employee code, designation, date of joining and employment status.

8. Workflow

SCREEN 9.13 · PORTAL — ASSET MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - ASSET MANAGEMENT SCREEN]

Insert ASSET MANAGEMENT SCREEN screenshot here.

1. Purpose

The full asset inventory, and the actions that move an asset between the pool and a person.

2. UI Components

UI element	What it shows
Heading	"Assets", with tabs beneath it.
Tabs	"All Assets" for HR and above; "My Assets" for everyone.
Search & filter	"Search assets..." and a status filter — All statuses / Available / Assigned / Maintenance / Retired.
Table columns	Asset, Category, Serial No., Status, Assigned To, and an action column.
Status badges	available (green), assigned (amber), maintenance (neutral), retired (red).
My Assets tab	A card grid of what you are holding. Empty: "No assets currently assigned to you."
Add / Edit dialog	Name, Category (laptop, monitor, keyboard, mouse, mobile, accessory, other), Serial number, Purchase date, Notes.
Assign dialog	"Assign {asset name}" with an Employee dropdown.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Add Asset	Adds an asset to the inventory.
User-plus	—	Assigns an available asset to somebody.
Undo arrow	—	Returns an assigned asset to the pool.
Trash	—	Removes an asset, after a confirmation reading Remove {name}?

4. How to Use

1. Open Portal → Assets and stay on the All Assets tab.
2. Click Add Asset and record the name, category, serial number and purchase date.
3. To hand it out, click the user-plus icon on its row, choose the employee and click Assign.
4. When it comes back, click the undo arrow on its row.

5. Filter by status to see what is available, what is out and what is in maintenance.

5. User Actions

Action	Where / how
Add an asset	Add Asset.
Issue an asset	The user-plus icon, then choose a person.
Take an asset back	The undo arrow.
Retire an asset	Edit it and set the status, or delete it.

6. Expected Result

After this action	The application does this
An asset is added	"Asset added", or "Asset updated" when editing.
An asset is assigned	"Asset assigned" and the row shows the holder's name.
Assignment fails	"Could not assign asset".
An asset is returned	"Asset returned" and its badge goes back to available.
An asset is deleted	"Asset removed", or "Could not remove asset".

7. Block Diagram

8. Workflow

SCREEN 9.14 · PORTAL — RECRUITMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - RECRUITMENT SCREEN]

Insert RECRUITMENT SCREEN screenshot here.

1. Purpose

The hiring pipeline: candidates, their status through the process, and the interviews scheduled against each of them.

2. UI Components

UI element	What it shows
Heading	"Recruitment" with "{total} candidates" beneath it.
Search & filter	"Search candidates..." and a status filter — All statuses / Applied / Interview Scheduled / Interviewed / Offered / Joined / Rejected.
Table columns	Candidate (name over email), Applied For, Status, and an action column.
Status badges	applied (neutral), interview scheduled (amber), interviewed (default), offered (green), joined (green), rejected (red).
Empty state	"No candidates yet."
Add dialog	Full name (required), Email (required), Phone, Source ("LinkedIn, Referral..."), Notes.
Detail dialog	The candidate's name as the heading, a status dropdown, an information grid (Email, Phone, Source, Applied for), a Notes section, and an Interviews section.
Interviews	Each interview shows its date and time and an outcome dropdown — Pending / Pass / Fail. Empty: "No interviews scheduled yet."

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Add Candidate	Registers a new candidate.
Trash	—	Removes a candidate, after a confirmation reading Remove {name}?
Plus (interviews)	—	Schedules an interview at the chosen date and time.

4. How to Use

1. Open Portal → Recruitment.
2. Click Add Candidate and record their name, email, phone and where they came from.
3. Click the candidate's row to open them.
4. Pick a date and time and click the plus to schedule an interview.

5. After the interview, set its outcome to Pass or Fail.
6. Move the candidate's status along as the process advances — Applied, Interview Scheduled, Interviewed, Offered, Joined.
7. When they join, add them as an employee — Screen 9.4.

5. User Actions

Action	Where / how
Register a candidate	Add Candidate.
Move a candidate along	The status dropdown in their detail dialog.
Schedule an interview	Pick a date and time, click the plus.
Record an interview outcome	The outcome dropdown beside it.
Remove a candidate	The trash icon, then confirm.

6. Expected Result

After this action	The application does this
A candidate is added	"Candidate added" and the list refreshes.
The status is changed	"Status updated".
An interview is scheduled	"Interview scheduled" and the date field clears.
Scheduling fails	"Could not schedule interview".
A candidate is removed	"Candidate removed", or "Could not remove candidate".

7. Block Diagram

8. Workflow

START · Portal → Recruitment

SCREEN 9.15 · PORTAL — POST AN ANNOUNCEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - NEW ANNOUNCEMENT DIALOG]

Insert NEW ANNOUNCEMENT DIALOG screenshot here.

1. Purpose

Publishes a company announcement. It appears immediately on everyone's Announcements module, and the newest one is shown at the foot of every Home screen.

2. UI Components

UI element	What it shows
Dialog title	"New Announcement" or "Edit Announcement".
Title	Required.
Body	A four-row text area, required. Line breaks are preserved.
Category	News · Holiday · Event · General.
Pinned	A checkbox. Pinned announcements carry a pin icon and an amber badge.
Buttons	Cancel, and Post (new) or Save changes (editing).

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Announcement	Opens this dialog.
Post / Save changes	—	Publishes the announcement.
Pinned checkbox	Pinned	Flags the announcement across the whole system.

4. How to Use

1. Open Portal → Announcements and click New Announcement.
2. Write the title — this is what people see first, on Home and in the module list.
3. Write the body. Keep the first two lines meaningful; that is all the phone shows in the list.
4. Choose a category so the badge reads correctly.
5. Tick Pinned if it should stay flagged.
6. Click Post.

5. User Actions

Action	Where / how
Publish an announcement	New Announcement, fill it, Post.
Pin an announcement	The Pinned checkbox.
Correct an announcement	The pencil on its card, then Save changes.

6. Expected Result

After this action	The application does this
An announcement is posted	"Announcement posted" and it appears for everyone at once.
An announcement is edited	"Announcement updated".
Saving fails	"Could not save announcement".
The title or body is empty	"Title is required" or "Body is required".
It is pinned	A pin icon on the portal card and an amber "pinned" badge in the native module.

WHERE AN ANNOUNCEMENT IS SEEN

Three places at once: the Announcements module on the phone, the Announcements page in the portal, and — if it is the newest — the card at the foot of every Home screen and the employee dashboard.

7. Block Diagram

8. Workflow

START · Portal → Announcements → New Announcement

SCREEN 9.16 · PORTAL — REPORTS

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - REPORTS SCREEN]

Insert REPORTS SCREEN screenshot here.

1. Purpose

Seven company-wide reports across attendance, leave, payroll, tasks, projects, employees and the reporting structure. Every one can be downloaded as a CSV or printed.

2. UI Components

UI element	What it shows
Heading	"Reports", with Month and Year dropdowns at the top right.
Tabs	Attendance · Leaves · Payroll · Tasks · Projects · Employees · Reporting Manager.
Toolbar	Download CSV and Print, on every tab. Both are hidden when the page is printed.
Attendance report	Columns: Employee, Present, Absent, Half Day, Late. File: attendance-{year}-{month}.csv
Leaves report	Columns: Employee, Leave Type, Allocated, Used, Remaining. File: leaves-{year}.csv
Payroll report	A summary line — "{n} employees paid · Gross ₹x · Net ₹y" — and columns Employee, Gross Pay, Net Pay. File: payroll-{year}-{month}.csv
Tasks report	Columns: Assignee, Assigned, In Progress, Review, Completed. File: tasks-by-assignee.csv
Projects report	Columns: Project, Status, Priority, Progress (%), Members, Deadline. File: projects.csv
Employees report	Columns: Department, Designation, Active, Inactive. File: employees-by-department.csv
Reporting Manager report	One card per manager with their designation, department and report count, and a nested table of Employee, Department, Status. Anyone unassigned is grouped separately. File: reporting-managers.csv
Unassigned warning	"{n} employee(s) have no reporting manager. Set one in Employees → edit → Reporting manager."
Empty state	"No employees to report on yet."

3. Icons & Buttons

Icon / control	Label	What it does
Download	Download CSV	Downloads the current tab as a CSV.
Printer	Print	Opens the browser print dialogue, with the filters and toolbar hidden.

4. How to Use

1. Open Portal → Reports.
2. Set the Month and Year — they apply to the attendance, leaves and payroll reports.
3. Click the tab you want.
4. Read the table.
5. Click Download CSV to take the figures away, or Print for a paper copy.

5. User Actions

Action	Where / how
Review a month's attendance	The Attendance tab with the month set.
Check leave balances across the company	The Leaves tab.
Reconcile a payroll run	The Payroll tab.
See workload by person	The Tasks tab.
Find people with no manager	The Reporting Manager tab.
Export or print	Download CSV or Print.

6. Expected Result

After this action	The application does this
A tab is opened	The report is computed by the database and drawn.
Download CSV is clicked	A CSV downloads with the name shown in the table above.
Print is clicked	The browser print dialogue opens with the toolbar and filters hidden.
Somebody has no reporting manager	An amber warning names how many, and where to fix it.
A role without permission requests a report	The database refuses it. Reports is not shown in the navigation for those roles.

WHERE THE PERMISSION CHECK HAPPENS

Every report is a database function that re-checks for an HR-level role before it reads a single row. That is why the Reports page carries no permission check of its own — the enforcement is where it cannot be bypassed.

7. Block Diagram

8. Workflow

SCREEN 9.17 · PORTAL — DEPARTMENTS & DESIGNATIONS

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - SETTINGS — DEPARTMENTS & DESIGNATIONS]

Insert SETTINGS — DEPARTMENTS & DESIGNATIONS screenshot here.

1. Purpose

The organisation's structure: the departments people belong to and the job titles they hold. Both are set up before employees are added, because both are chosen from a dropdown on the employee form.

2. UI Components

UI element	What it shows
Heading	"Settings", with six tabs.
Tabs	Company Profile · Departments · Designations · Roles & Permissions · Email / SMTP · Audit Logs.
Departments table	Columns: Name, Description (an em dash where none), and an action column.
Designations table	Columns: Title, Description (an em dash where none), and an action column.
Department dialog	"New Department" or "Edit Department" with Name (required) and Description (optional).
Designation dialog	"New Designation" or "Edit Designation" with Title (required) and Description (optional).
Seeded values	Departments — Engineering, Design, AI/ML, Operations. · Designations — Founder & CEO, Software Engineer, Product Designer, AI Engineer, HR Executive.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Department / New Designation	Creates one.
Pencil	—	Edits it.
Trash (red)	—	Deletes it, after a confirmation reading Remove "{name}"?

4. How to Use

1. Open Portal → Settings.
2. Click the Departments tab and click New Department.
3. Give it a name and, if useful, a description. Click Save.
4. Do the same on the Designations tab for each job title.
5. Only then add employees — both appear as dropdowns on the employee form.

5. User Actions

Action	Where / how
Add a department	New Department.
Add a job title	New Designation.
Rename either	The pencil.
Remove either	The trash icon, then confirm.

6. Expected Result

After this action	The application does this
A department is created	"Department created", or "Department updated" when editing.
Saving fails	"Could not save department" or "Could not save designation".
A department is deleted	"Department removed", or "Could not remove department".
A designation is created	"Designation created".
The name is empty	"Name is required" or "Title is required".

SET THESE UP FIRST

Departments and designations are chosen from dropdowns when an employee is added. Creating them afterwards means going back through every employee record to set them.

7. Block Diagram

8. Workflow

START · Portal → Settings

SCREEN 9.18 · PORTAL — ROLES, EMAIL & AUDIT LOG

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - SETTINGS — EMAIL & AUDIT]

Insert SETTINGS — EMAIL & AUDIT screenshot here.

1. Purpose

The remaining three Settings tabs: a read-only view of what each role can do, the company's own outbound mail configuration, and a record of who did what.

2. UI Components

UI element	What it shows
Roles & Permissions tab	A card per role — the role name with underscores removed, and its permissions as badges. Read-only.
Email / SMTP tab	A connection status badge (Connected / Not connected / Unknown), a Test connection button, and the fields SMTP host, Port (587 / 465 / 25), Encryption (STARTTLS / TLS implicit), SMTP username, SMTP password, From email, From name, Reply-to and "Use this server" (Use our own SMTP / Use the platform's).
Development banner	"Development mode. Emails are written to the server log and not delivered." — shown only when the server is in development mode.
Recent email activity	Columns: To, Subject, Template, Status, When. Status: sent (green), failed (red), anything else (amber). Empty: "No emails sent yet."
Audit Logs tab	Columns: User (or "System"), Action, Entity (with its record number), Date. Twenty rows to a page, with Previous and Next.
Security note	"The password is encrypted before it is stored and is never sent back to this page. Nothing here is visible to another company."

3. Icons & Buttons

Icon / control	Label	What it does
Test connection	Test connection	Checks whether the SMTP settings actually connect.
Save settings	Save settings	Saves the mail configuration. Disabled while the host is blank.
Send	Send test email	Sends a test message to a typed address.
Previous / Next	—	Pages through the audit log.

4. How to Use

1. Open Portal → Settings.
2. Roles & Permissions: read it to confirm what each role is granted. It is not editable here.

3. Email / SMTP: enter your host, port, username, password and From address. Choosing a port sets the encryption for you — 465 selects implicit TLS, 587 and 25 select STARTTLS.
4. Click Test connection, then Save settings.
5. Type an address and click Send test email to confirm delivery end to end.
6. Audit Logs: page through to see who did what, and when.

5. User Actions

Action	Where / how
Check what a role can do	The Roles & Permissions tab.
Configure outbound mail	The Email / SMTP tab.
Verify mail works	Test connection, then Send test email.
Investigate a change	The Audit Logs tab.

6. Expected Result

After this action	The application does this
Mail settings are saved	"Email settings saved" and the password field clears.
Saving fails	"Could not save the email settings".
A test email is sent	The server's own message is shown and the log refreshes.
A test email fails	"The test email could not be sent".
The password field is left blank when editing	The stored password is kept. It is never sent back to the page.
No mail has been sent	"No emails sent yet."

LEAVING THE PASSWORD BLANK IS A REAL RULE, NOT AN OVERSIGHT

The stored SMTP password is never returned to this page. Leave the field blank to keep it; type in it only to replace it.

7. Block Diagram

SCREEN 9.19 · GENERATE A LETTER (MOBILE)

Module	Mobile app — native	Available to	Founder · Company Admin · HR Admin
--------	---------------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - GENERATE LETTER SHEET]

Insert GENERATE LETTER SHEET screenshot here.

1. Purpose

Issues a formal letter from the phone. It is the same operation as the portal's Generate Letter tab (Screen 9.12) and produces the identical document — an offer issued from a handset and the same offer reopened on the web say exactly the same thing.

2. UI Components

UI element	What it shows
Header	◀ Cancel at the left and the title "Generate letter" at 18 pt bold.
Letter type	Five chips under the label "Letter type": Offer Letter · Joining / Appointment · Experience · Relieving · Employment Certificate. The selected chip turns solid brand green.
Employee	A "Search people" field with up to ten matching names beneath it, each showing the person's designation. Once chosen, the name is shown in a card with a Change link.
Annual CTC	Shown for an offer or an appointment letter only. A number field with the placeholder "e.g. 900000" and the hint "Leave blank to use the employee's salary structure, if any."
Probation	Shown for those two types only. Pre-filled with "Six months from the date of joining".
Notice period	Shown for those two types only. Pre-filled with "Thirty days on either side after confirmation".
Custom message (optional)	A multi-line field capped at 500 characters, with the placeholder "Added below the letter".
Generate	A full-width brand-green button. Dimmed until an employee has been chosen.

3. Icons & Buttons

Icon / control	Label	What it does
Generate (header button)	Generate	Opens this form from the Letters module. Shown only to the Founder, Company Admin and HR Admin.
Letter-type chip	—	Chooses the type. Only one can be selected.
Change	Change	Clears the chosen employee and returns to the search list.
◀ Cancel	Cancel	Closes the form without issuing anything.
Generate (button)	Generate	Issues the letter and opens it immediately.

4. How to Use

1. Open Modules → Letters and tap Generate in the header.
2. Tap the chip for the kind of letter you are issuing.
3. Type a name into Search people and tap the person. Their designation is shown beneath each name so two people with the same name can be told apart.
4. For an offer or a joining letter, set the annual CTC — or leave it blank to use the employee's own salary structure.
5. Check the probation and notice-period wording. Both are pre-filled with the company's standard terms.
6. Add a custom message if the letter needs one; it is printed below the body.
7. Tap Generate. The finished letter opens straight away.
8. Tap Share to send it on.

5. User Actions

Action	Where / how
Choose the letter type	The five chips.
Choose the recipient	Search people, then tap a name.
Change the recipient	Change, on the chosen-employee card.
Set the commercial terms	Annual CTC, Probation, Notice period — offer and appointment only.
Issue the letter	Generate.

6. Expected Result

After this action	The application does this
A letter is issued	It opens immediately as a document and is added to the Letters list, visible to the employee under their own Letters module.
Generation is refused	"Not generated" with the reason — most often "Could not generate the letter", or the database's own refusal if the caller is not HR or the employee belongs to another company.
No employee has been chosen	The Generate button stays dimmed.
The CTC is left blank on an offer letter	The employee's configured salary structure is used. If there is none, the letter is issued without a CTC figure.
More than ten people match the search	"{n} more — narrow the search." is shown beneath the ten names.
Nobody matches	"Nobody by that name.", or "No employees to write to." where the directory is empty.

THE GENERATE BUTTON IS A COURTESY, NOT THE CONTROL

It is hidden from everyone below HR, but that is only so nobody is offered something that would fail. The database function checks for itself that the caller is HR and that the employee belongs to their company, and it records the letter and resolves its content in one call — so there is never a moment when a letter exists but cannot be shown.

7. Block Diagram

8. Workflow

10 Admin Module — Founder & Company Admin

The Founder and the Company Admin hold every screen in Sections 8 and 9, and add company-level control on top. The two roles are not merely similar — the database groups them together in every rule, so anything documented for one is true of the other.

Screen	What it adds	Withheld from HR?
10.1 Organisation Dashboard	Headcount, today's attendance and task throughput across the company.	No — HR sees this too.
10.2 User & Account Management	Creating logins, changing status, removing accounts.	No — HR does this too.
10.3 Role Management	Assigning the role that decides everything a person can reach.	No — HR does this too.
10.4 Permission Management	The read-only map of what each role is granted.	No — HR sees this too.
10.5 Company Profile	The company's name and address, which appear on every payslip and letter.	Yes — Founder and Company Admin only.
10.6 Company Bank Details	The payout account and the statutory registration numbers.	No — HR may view and edit.
10.7 Add / Edit Bank Account	Adding an account and its GST, PAN, TAN, PF and ESI numbers.	No — HR may do this.
10.8 Bank Account Verification	Marking an account verified so payroll can pay from it.	Yes — Founder, Company Admin and Accounts Manager only.

SEPARATION OF DUTIES, DELIBERATELY

The two withheld screens are separated on purpose. Whoever edits a bank account cannot be the one who verifies it: editing requires an HR-level role, verifying requires Founder, Company Admin or Accounts Manager. The database enforces both, not the interface.

SCREEN 10.1 · PORTAL — ORGANISATION DASHBOARD

Module	In-app Portal	Available to	Every role except Employee
--------	---------------	--------------	----------------------------

[SCREENSHOT PLACEHOLDER - ADMIN DASHBOARD]

Insert ADMIN DASHBOARD screenshot here.

1. Purpose

The company at a glance: how many people there are, how many are in today, and how the work is moving. Every role except Employee lands here on opening the Portal tab; an employee gets the personal dashboard instead (Screen 8.13).

2. UI Components

UI element	What it shows
Greeting	"Welcome back," followed by your full name.
Add Employee	A button at the top right, shown only to roles that manage employees.
First stat row	Total Employees (brand) · Present Today (green) · On Leave (amber) · Absent (red). Each links to the page it summarises.
Second stat row	Tasks In Progress (amber) and Tasks Completed (green), each linking to the task list filtered to that status.
Employees by department	A bar chart of headcount per department.
Headcount growth	A line chart over time. Where there is too little joining-date data: "Not enough joining-date data yet to chart growth."

3. Icons & Buttons

Icon / control	Label	What it does
User-plus	Add Employee	Goes to the Employees page.
Stat card	—	Each card is a link: Total Employees → Employees, Present Today and Absent → Attendance, On Leave → Leaves, the task cards → Tasks filtered by status.

4. How to Use

1. Open the Portal tab. Every role except Employee lands here.
2. Read the first row for the day's position — who is in, who is off, who is missing.
3. Read the second row for how the work is moving.
4. Click any card to go straight to the detail behind the number.
5. Use the two charts for the shape of the organisation rather than the day.

5. User Actions

Action	Where / how
Check today's floor	Present Today, On Leave and Absent.
Open the detail behind a number	Click the card.
Add somebody	Add Employee.
Look at growth	The headcount chart.

6. Expected Result

After this action	The application does this
The dashboard opens	Headcount, the day's attendance summary and the two task counts are read together and drawn.
A card is clicked	The page it summarises opens, already filtered where that applies.
There is too little joining-date data	The growth chart is replaced with an explanatory line.
An employee opens the Portal tab	They land on the personal dashboard instead — Screen 8.13.

7. Block Diagram

8. Workflow

Headcount, today's attendance and task counts are read together

A card is clicked to reach the detail

END · The day's position is understood

SCREEN 10.2 · PORTAL — USER & ACCOUNT MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - USER MANAGEMENT SCREEN]

Insert USER MANAGEMENT SCREEN screenshot here.

1. Purpose

Creating, suspending and removing the accounts people sign in with. In this system a person and their login are one record — creating an employee creates their login, and the employee's status is what controls whether they can get in.

There is no separate user table to administer. That is deliberate: two lists of people would drift apart, and somebody would end up with a login and no record, or a record and no way in.

2. UI Components

UI element	What it shows
Where it lives	Portal → Employees. The employee list is the user list.
Create	Add Employee. Email and Temporary password on that form are the login credentials.
Status field	Active · Inactive · On Notice · Exited, on the employee form.
Status badges	active (green), on notice (amber), inactive (neutral), exited (red).
Remove	The red trash icon on the employee row, with a confirmation.
Audit trail	Portal → Settings → Audit Logs records who created, changed and removed accounts.

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Add Employee	Creates the person and their login together.
Pencil	—	Opens the record to change the status, the role or anything else.
Trash (red)	—	Removes the account. Not offered on your own row.

4. How to Use

1. Open Portal → Employees.
2. To create an account: click Add Employee, fill the email and a temporary password of at least eight characters, set the role and set the status to Active, then save. Give the person their temporary password directly.
3. To suspend somebody: open their record and set the status to Inactive. Their login still exists but the application refuses them.
4. To mark a leaver: set the status to On Notice while they work it out, then Exited on their last day.

5. To remove an account entirely: click the red trash icon on their row and confirm.
6. To check what has been done: Portal → Settings → Audit Logs.

5. User Actions

Action	Where / how
Create an account	Add Employee.
Suspend an account	Set the status to Inactive.
Mark a leaver	Set the status to On Notice, then Exited.
Delete an account	The trash icon, then confirm.
Reset somebody's password	There is no reset here. The person changes their own at Portal → Profile; if they cannot get in, create a new temporary password by editing their record.

6. Expected Result

After this action	The application does this
An account is created	"Employee added". The person can sign in immediately with the temporary password.
An account is set to Inactive	Their password still works against the authentication service, but the application refuses them with "This account is not active".
An account is deleted	"Employee removed" and the row disappears.
Deleting fails	"Could not remove employee".
Somebody tries to delete their own account	The trash icon is not offered on their own row.

A LOGIN AND A RECORD ARE TWO SEPARATE THINGS

"Invalid email or password" means no login exists for that address. "This account is not active" means the login worked but the employee record behind it is not active. The two failures have different fixes.

PREFER INACTIVE TO DELETION

Setting somebody Inactive keeps their attendance, leave and payslip history intact while denying them access. Deleting the account removes the person from the directory. For a leaver, Exited is almost always the right choice.

7. Block Diagram

PRESENTATION	Employee list as the user list	Add Employee = create login	Status field	Delete
--------------	--------------------------------	-----------------------------	--------------	--------

8. Workflow

SCREEN 10.3 · PORTAL — ROLE MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - ROLE MANAGEMENT SCREEN]

Insert ROLE MANAGEMENT SCREEN screenshot here.

1. Purpose

Assigning the role that decides everything a person can reach. It is a single field on the employee record, and it is the most consequential field in the system.

2. UI Components

UI element	What it shows
Where it lives	Portal → Employees → the person → Edit → the Role dropdown.
Options offered	Founder · HR Admin · Project Manager · Team Lead · Employee.
Role shown to the person	As a pill on their Profile sheet in the app and on their Profile page in the portal, with the underscores removed.
Effect on the phone	Module tiles are filtered against the role the moment they next open the Modules tab.
Effect in the portal	Navigation rows, tabs, buttons and columns appear or disappear on their next page load.
Reference	Portal → Settings → Roles & Permissions shows what each role is granted — Screen 10.4.

3. Icons & Buttons

Icon / control	Label	What it does
Role dropdown	Role	Sets the person's role. Required.
Save changes	—	Applies it.

4. How to Use

1. Decide the role before you change it — read Section 4.2 and the permission matrices in 4.3 and 4.4.
2. Open Portal → Employees and find the person.
3. Click their row, then Edit.
4. Change the Role dropdown.
5. Click Save changes.
6. Ask the person to sign out and back in, so their session picks up the new role immediately.

5. User Actions

Action	Where / how
Promote somebody to HR	Set their role to HR Admin.

Action	Where / how
Give somebody project responsibility	Set their role to Project Manager or Team Lead.
Reduce somebody to self-service	Set their role to Employee.
See what a role grants	Portal → Settings → Roles & Permissions.

6. Expected Result

After this action	The application does this
A role is changed	"Employee updated". What the person can reach changes on their next page load or their next visit to the Modules tab.
No role is chosen	"Role is required".
Somebody is made HR Admin	They gain leave approvals, the Team attendance tab, payroll, documents, reports and settings — and the Reporting Manager tile on the phone.
Somebody is reduced to Employee	They lose those, and their portal dashboard changes to the personal one.
A role is changed while the person is signed in	Their existing session keeps the old role until they sign out and in again. The database, however, applies the new role to every request immediately.

COMPANY ADMIN AND ACCOUNTS MANAGER ARE NOT OFFERED HERE

The dropdown offers five roles. Company Admin is a tenancy-level role and Accounts Manager is a payroll-only role added later; both are set by the party that operates the platform rather than from this form.

THE ROLE IS THE WHOLE OF THE ACCESS DECISION

There is no per-person permission override anywhere in the system. Everything a person can reach follows from this one field, which is why it is worth being deliberate about.

7. Block Diagram

DATA & RULES

Role stored on the user record

Every rule in the database reads it

8. Workflow

SCREEN 10.4 · PORTAL — PERMISSION MANAGEMENT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - PERMISSION MANAGEMENT SCREEN]

Insert PERMISSION MANAGEMENT SCREEN screenshot here.

1. Purpose

The map of what each role is granted, shown as a card per role with its permissions as badges.

It is deliberately read-only. Permissions are a property of the role, not of the person, and they are defined in the system's own reference data rather than edited in the interface — which is what makes the permission matrices in Section 4 dependable.

2. UI Components

UI element	What it shows
Where it lives	Portal → Settings → Roles & Permissions.
Role cards	One per role, with the role name (underscores removed) and its permissions listed as badges.
Permission codes	employees.manage · employees.view · projects.manage · tasks.manage · payroll.manage.
Grants by role	Founder — all five. HR Admin — employees.manage and employees.view. Project Manager — employees.view, projects.manage, tasks.manage. Team Lead — employees.view, tasks.manage. Employee — employees.view.
Editing	None. There is no add, edit or delete on this tab.

3. Icons & Buttons

This screen carries no icons or buttons of its own — it is presentation only.

4. How to Use

1. Open Portal → Settings and click the Roles & Permissions tab.
2. Read each card to see what that role is granted.
3. Cross-check against the matrices in Sections 4.3 and 4.4, which describe the same grants in terms of screens.
4. To change what somebody can do, change their role — Screen 10.3. There is no way to grant a permission to one person alone.

5. User Actions

Action	Where / how
Confirm what a role can do	Read its card.
Change what a person can do	Change their role — Screen 10.3.
Audit access	Compare this tab against the employee list's Role column.

6. Expected Result

After this action	The application does this
The tab is opened	One card per role, each listing its permission badges.
A permission is looked for that is not listed	It does not exist. The five codes above are the whole set.
An attempt is made to edit	There is nothing to edit — the tab is a reference view.

WHY PERMISSIONS ARE NOT EDITABLE HERE

Access is enforced inside the database, by rules that name roles directly. A permission edited in the interface but not reflected in those rules would be a lie on screen. Keeping this tab read-only means what it shows is always what the system actually does.

7. Block Diagram

PRESENTATION

One card per role, permissions as badges

INTERACTION

Read-only — no add, edit or delete

API LAYER

Roles with their permission grants

RULES

Row-level security and database functions name roles directly

the grants shown here are what those rules use

8. Workflow

START · Portal → Settings → Roles & Permissions

Each role is drawn with its permission badges

◆ Does somebody need different access?

YES

Change their role on the employee record

NO

Nothing to do — permissions are not per person

END · Access is confirmed against the definitive list

SCREEN 10.5 · PORTAL — COMPANY PROFILE

Module	In-app Portal	Available to	Founder · Company Admin
--------	---------------	--------------	-------------------------

[SCREENSHOT PLACEHOLDER - COMPANY PROFILE SETTINGS]

Insert COMPANY PROFILE SETTINGS screenshot here.

1. Purpose

The company's registered name and address. They appear on every payslip, every letter and every certificate the system produces, which is why this is the one Settings tab the HR Admin cannot edit.

2. UI Components

UI element	What it shows
Where it lives	Portal → Settings → Company Profile.
Fields	Company name and Address. Both are disabled for anyone who is not the Founder or the Company Admin.
Save	"Save changes", shown only to those two roles.
Note for others	"Only the Founder can edit company profile."

3. Icons & Buttons

Icon / control	Label	What it does
Save changes	Save changes	Writes the company name and address.

4. How to Use

1. Open Portal → Settings. The Company Profile tab is the first one.
2. Set the company name exactly as it should appear on payslips and letters.
3. Set the registered address.
4. Click Save changes.
5. Generate one payslip and one letter afterwards to confirm the letterhead reads correctly.

5. User Actions

Action	Where / how
Set the company name	The Company name field.
Set the registered address	The Address field.
Save	Save changes.

6. Expected Result

After this action	The application does this
The profile is saved	"Company profile updated". Every payslip and letter generated afterwards carries the new details.
Saving fails	"Could not update company profile".
An HR Admin opens the tab	The fields are visible but disabled, with the line "Only the Founder can edit company profile."

CHANGE THIS BEFORE THE FIRST PAYROLL RUN

Payslips and letters already generated keep whatever the company details were at the time. Setting them correctly before the first run avoids reissuing documents.

7. Block Diagram

8. Workflow

END · Payslips and letters carry the correct company details

SCREEN 10.6 · PORTAL — COMPANY BANK DETAILS

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin · Accounts Manager
--------	---------------	--------------	---

[SCREENSHOT PLACEHOLDER - COMPANY BANK DETAILS SCREEN]

Insert COMPANY BANK DETAILS SCREEN screenshot here.

1. Purpose

The accounts salaries are paid from, the statutory registration numbers that appear on payslips, and the logo and signature images those payslips are printed with. Never visible to an employee.

2. UI Components

UI element	What it shows
Heading	"Company Bank Details" with the line "The accounts salaries are paid from, and the registration numbers that appear on payslips."
Empty state	A dashed card reading "No bank account on file" and "Payroll needs a payout account before it can produce a payment file."
Account card	The bank name and company name with a bank icon, then the badges: "Payout account" where it is the primary one, the status, and either a green "Verified" badge or an amber "Unverified" badge.
Detail fields	Account holder · Account number (masked to the last four digits, with a reveal control) · IFSC · Branch · SWIFT · UPI ID · GST · PAN · TAN · PF registration · ESI registration · Authorized signatory.
Branding	Company logo and Digital signature previews, or "Not set".
Footer	"Updated {date} by {name} · verified by {name}".
Error hint	"If this says the function does not exist, migrations 0007-0009 have not been applied yet."

3. Icons & Buttons

Icon / control	Label	What it does
Plus	Add account	Opens the bank account form. HR and above.
Eye / Eye-off	Show / Hide account number	Reveals or masks the full account number.
Upload	Logo	Uploads the company logo used on payslips.
Upload	Signature	Uploads the authorised signature image used on payslips.
Pencil	Edit	Opens the account for editing. HR and above.

Icon / control	Label	What it does
Badge-check	Verify	Marks the account verified. Founder, Company Admin and Accounts Manager only.
Shield-alert	—	Marks an account that has not yet been verified.

4. How to Use

1. Open Portal → Company Bank Details.
2. Click Add account and fill the bank and statutory sections — Screen 10.7.
3. Tick "Use this account to pay salaries" on the account payroll should use.
4. Save the account, then upload the company logo and the authorised signature so payslips print correctly.
5. Ask the Founder, Company Admin or Accounts Manager to click Verify.
6. Use the eye icon to check the account number against the bank's own record before verifying.

5. User Actions

Action	Where / how
Record a payout account	Add account.
Check the account number	The eye icon.
Set the payslip branding	The Logo and Signature upload buttons.
Edit an account	Edit.
Verify an account	Verify — Founder, Company Admin or Accounts Manager.

6. Expected Result

After this action	The application does this
An account is verified	"Account verified" and the badge turns green.
Verification fails	"Could not verify this account".
An image is uploaded	"Image uploaded" and the preview appears.
The upload fails	"Could not upload the image".
No account has been added	The dashed empty card, warning that payroll needs a payout account.
An employee reaches the page	They cannot — the route refuses them, and the module is not in their navigation.

TWO ROLES, TWO DIFFERENT RIGHTS

Editing an account requires an HR-level role. Verifying one requires Founder, Company Admin or Accounts Manager. The interface reflects that split, and the database re-checks both — so an HR Admin who edits an account still cannot be the one who signs it off.

7. Block Diagram

8. Workflow

SCREEN 10.7 · PORTAL — ADD / EDIT BANK ACCOUNT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin
--------	---------------	--------------	------------------------------------

[SCREENSHOT PLACEHOLDER - BANK ACCOUNT FORM]

Insert BANK ACCOUNT FORM screenshot here.

1. Purpose

Records one payout account together with the statutory registrations that must appear on a payslip. Every format is checked here against the same pattern the database enforces, so a mistyped IFSC is caught before it is stored.

2. UI Components

UI element	What it shows
Title	"Add bank account" or "Edit bank account".
Company section	Company name · Legal name.
Bank section	Bank name · Account holder name · Account number (digits only, 6 to 30) · IFSC code (e.g. HDFC0001234) · Branch name · SWIFT code (8 or 11 characters) · UPI ID (e.g. company@bank).
Statutory section	GST number (15-character GSTIN) · PAN number (e.g. ABCDE1234F) · TAN number (e.g. BLRW12345C) · PF registration number · ESI registration number.
Payslip branding	Authorized signatory · Company logo URL · Digital signature URL, with the note "Both appear on generated payslips. Save the account first to upload image files instead."
Primary checkbox	"Use this account to pay salaries".
Buttons	Cancel and Save.

3. Icons & Buttons

Icon / control	Label	What it does
Cancel	Cancel	Closes without saving.
Save	Save	Writes the account.
Use this account to pay salaries	Checkbox	Marks this as the payout account.

4. How to Use

1. Open Portal → Company Bank Details and click Add account.
2. Fill the company name and the legal name as registered.
3. Fill the bank section. The account number takes digits only; the IFSC must match the standard four-letter, zero, six-character pattern.
4. Fill the statutory section — GST, PAN, TAN, PF and ESI. These print on every payslip.

5. Name the authorised signatory.
6. Tick "Use this account to pay salaries" if payroll should pay from it.
7. Click Save, then upload the logo and signature images from the account card.

5. User Actions

Action	Where / how
Record a bank account	Fill the form and Save.
Record the statutory numbers	The statutory section.
Set the payout account	The checkbox.
Correct an account	Edit on its card.

6. Expected Result

After this action	The application does this
A new account is saved	"Bank account added".
An existing account is saved	"Bank details updated".
Saving fails	"Could not save bank details", with the server's own reason where there is one.
IFSC, SWIFT, GST, PAN or TAN is typed in lower case	It is converted to upper case before it is stored.
A format does not match	The field is rejected with the pattern it expects.

IMAGES ARE UPLOADED AFTER THE ACCOUNT EXISTS

The two URL fields accept a link, but the usual route is to save the account first and then use the Logo and Signature upload buttons on its card, which store the files with the account.

7. Block Diagram

DATA & RULES

Company bank details

upsert requires an HR-level role

8. Workflow

START · Add account, or Edit on an existing card

Company, bank, statutory and branding fields are filled

**◆ Do the account number, IFSC, SWIFT, GST, PAN and TAN match their patterns?****YES**

The account is saved

NO

The offending field is rejected with the expected pattern

The logo and signature are uploaded from the account card

**END · The account is on file, awaiting verification**

SCREEN 10.8 · PORTAL — BANK ACCOUNT VERIFICATION

Module	In-app Portal	Available to	Founder · Company Admin · Accounts Manager
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - BANK VERIFICATION]

Insert the account card showing the Verify button and the Unverified badge.

1. Purpose

Signing off that a payout account has been checked against the bank's own record. It is a separate right from editing the account, held by a different set of roles on purpose.

2. UI Components

UI element	What it shows
Unverified state	An amber badge with a shield icon reading "Unverified", and a Verify button on the card.
Verified state	A green badge with a tick reading "Verified", and no Verify button.
Footer	"Updated {date} by {name} · verified by {name}" — the two names are recorded separately.
Who sees the button	Founder, Company Admin and Accounts Manager. An HR Admin sees the badge but not the button.

3. Icons & Buttons

Icon / control	Label	What it does
Badge-check	Verify	Marks the account verified and records who did it.
Shield-alert	—	The unverified marker.
Eye	Show account number	Reveals the full account number so it can be checked against the bank's record.

4. How to Use

1. Open Portal → Company Bank Details.
2. Find the account carrying the amber Unverified badge.
3. Click the eye icon to reveal the full account number.
4. Check the account number, the IFSC and the account holder name against the bank's own record — a statement, a cancelled cheque or the bank's portal.
5. Click Verify.
6. Confirm the footer now names you as the verifier.

5. User Actions

Action	Where / how
Reveal the account number to check it	The eye icon.

Action	Where / how
Sign the account off	Verify.
See who verified an account	The footer of its card.

6. Expected Result

After this action	The application does this
The account is verified	"Account verified", the badge turns green, and the footer records who did it.
Verification fails	"Could not verify this account".
An HR Admin views the card	The badge is shown but the Verify button is not.
An HR Admin's request reaches the server anyway	The database refuses it — verification requires an Accounts-level role.

WHY EDITING AND VERIFYING ARE SEPARATED

The person who types an account number should not be the only person who confirms it. Editing requires an HR-level role; verifying requires Founder, Company Admin or Accounts Manager. Both names are recorded on the card, so the separation is visible as well as enforced.

7. Block Diagram

8. Workflow

11 Specialist Roles

Three roles sit beside the main three. Each starts from the employee baseline in Section 8 and adds a narrow set of rights — and, just as importantly, each is denied things that HR holds. Documenting what a role cannot do matters as much as what it can: it is what makes the role worth having.

11.1 Project Manager

Runs projects and the work inside them. Has no reach at all over people records, leave decisions, pay, documents, reports or settings — which is the point of the role.

Adds on top of Employee	Where	Documented in
Create and edit projects	Portal → Projects → New Project / Edit	Screen 11.2
Add and remove project members	Portal → Projects → the project → Members tab	Screen 8.22
Create, delete and reassign any task	Portal → Tasks → New Task, and the task detail dialog	Screens 8.21, 11.4
Change a task's priority and project	Portal → Tasks → the task detail dialog	Screen 8.21
Create calendar events	Portal → Calendar → New Event	Screen 8.23
The organisation dashboard	Portal → Dashboard	Screen 10.1

Denied to a Project Manager

Cannot	Why
Add, edit or delete an employee	People administration belongs to HR. The Project Manager sees the directory as any employee does — two columns, read-only.
Approve or reject leave	Leave is decided by HR, the Founder or the Company Admin only.
See the Team attendance tab	Company-wide attendance is an HR view.
Run payroll or see salary structures	Payroll is HR and above.
Generate letters or edit policies	Documents are HR and above.
Open Reports or Settings	Both are hidden from the navigation, and both refuse at the database.
See another person's PAN, Aadhaar or bank details	Those columns are withheld at source from every role below HR.

Project Manager — workflow

SCREEN 11.2 · PORTAL — CREATE / EDIT PROJECT

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin · Project Manager
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - PROJECT FORM]

Insert PROJECT FORM screenshot here.

1. Purpose

Creates a project or changes its scope. It is the Project Manager's principal screen.

2. UI Components

UI element	What it shows
Title	"Create Project" or "Edit Project".
Project name	Required.
Description	A three-row text area.
Tech stack	"Tech stack (comma separated)", for example "React, FastAPI, PostgreSQL". Each entry becomes a badge on the project.
Priority	Low · Medium · High.
Status	Planning · Active · On Hold · Completed.
Deadline	A date field. Projects are listed by deadline everywhere.
Progress (%)	A number from 0 to 100.
Buttons	Cancel, and "Create project" or "Save changes".

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Project	Opens this dialog empty.
Pencil	Edit	Opens it pre-filled.
Create project / Save changes	—	Writes the project.

4. How to Use

1. Open Portal → Projects and click New Project.
2. Name the project — this is what appears in every list, on the phone and in the portal.
3. Write a description. It is the row subtitle in the native Projects module, so keep the first line meaningful.
4. List the technologies, separated by commas.

5. Set the priority, the status and the deadline.
6. Leave progress at 0 for a new project; update it as the work moves.
7. Click Create project, then open it and add members from the Members tab.

5. User Actions

Action	Where / how
Create a project	New Project.
Re-scope a project	Edit.
Put a project on hold	Set the status to On Hold.
Report progress	Set the Progress field.

6. Expected Result

After this action	The application does this
A project is created	"Project created" and the list refreshes.
A project is updated	"Project updated".
Saving fails	"Something went wrong", with the server's reason where there is one.
The name is empty	"Project name is required".
The status is set to On Hold	The badge turns amber everywhere the project appears.

7. Block Diagram

8. Workflow

START · Portal → Projects → New Project

11.3 Team Lead

A narrower Project Manager: full control over tasks, none over projects. A Team Lead runs the work inside projects somebody else has set up.

Adds on top of Employee	Where	Documented in
Create, delete and reassign any task	Portal → Tasks → New Task, and the task detail dialog	Screens 8.21, 11.4
Change a task's priority and project	Portal → Tasks → the task detail dialog	Screen 8.21
Add and delete checklist items on any task	The task detail dialog	Screen 8.21
Create calendar events	Portal → Calendar → New Event	Screen 8.23
The organisation dashboard	Portal → Dashboard	Screen 10.1

Denied to a Team Lead

Cannot	Why
Create or edit a project	Projects are Project Manager and above. The Team Lead works inside projects that already exist.
Add or remove project members	Membership follows the project, so it is the Project Manager's.
Everything a Project Manager is denied	People, leave, payroll, documents, reports and settings are all closed to a Team Lead as well.

Team Lead — block diagram

SCREEN 11.4 · PORTAL — CREATE / EDIT TASK

Module	In-app Portal	Available to	Founder · Company Admin · HR Admin · Project Manager · Team Lead
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - TASK FORM]

Insert TASK FORM screenshot here.

1. Purpose

Creates a task or changes its scope. Available to the manager tier only; everyone else moves tasks along but does not create them.

2. UI Components

UI element	What it shows
Title	"Create Task" or "Edit Task".
Title field	Required.
Description	A text area.
Project	A searchable dropdown with the placeholder "No project".
Assignee	A searchable dropdown with the placeholder "Unassigned".
Priority	Low · Medium · High.
Status	Assigned · In Progress · Review · Completed.
Due date	A date field. Tasks are listed by due date everywhere.
Buttons	Cancel, and "Create task" or "Save changes".

3. Icons & Buttons

Icon / control	Label	What it does
Plus	New Task	Opens this dialog empty.
Create task / Save changes	—	Writes the task.

4. How to Use

1. Open Portal → Tasks and click New Task.
2. Write the title — it is the row title on the phone, so make it specific.
3. Attach it to a project, or leave it unattached.
4. Choose the assignee. An unassigned task appears in the list but nobody's Open tasks count.
5. Set the priority and the due date.
6. Leave the status at Assigned for new work.

7. Click Create task.

5. User Actions

Action	Where / how
Create a task	New Task.
Reassign a task	Change the Assignee dropdown.
Move a task to a different project	Change the Project dropdown.
Re-prioritise	Change the Priority dropdown.

6. Expected Result

After this action	The application does this
A task is created	"Task created" and the list refreshes.
A task is updated	"Task updated".
Saving fails	"Something went wrong".
The title is empty	"Title is required".
A task is assigned to somebody	It appears in their Open tasks tile on Home and in their dashboard Kanban.

7. Block Diagram

8. Workflow

START · Portal → Tasks → New Task

11.5 Accounts Manager

A payroll-only role. It exists so that the person who signs off a payout account is not the same person who administers people — and it deliberately has none of HR's reach over employees, leave or documents.

Adds on top of Employee	Where	Documented in
View the company bank details	Portal → Company Bank Details	Screen 10.6
Verify a bank account	Portal → Company Bank Details → Verify	Screen 10.8
Read payroll	Portal → Payroll	Screen 8.19
The organisation dashboard	Portal → Dashboard	Screen 10.1

Denied to an Accounts Manager

Cannot	Why
Add, edit or delete an employee	People administration is HR's. The Accounts Manager sees the directory as an employee does.
Edit the company bank details	Editing requires an HR-level role. The Accounts Manager verifies; somebody else records.
Approve or reject leave	Leave is HR, Founder and Company Admin only.
Run payroll or edit salary structures	The run itself is HR and above. The Accounts Manager reads the result and verifies the account it will be paid from.
Generate letters, edit policies, open Reports or Settings	All HR and above.

Accounts Manager — block diagram

Accounts Manager — workflow

12 Platform Administration

The HRMS is multi-company. This section is for the party that operates the platform itself, not for a client company — a client administrator will never see either of these screens. It is documented here so that the client understands what a support session is, and what it means when the banner in Section 12.2 appears on their own screen.

WHAT A CLIENT COMPANY SHOULD KNOW

A platform administrator can enter a customer's account to help with a problem. When they do, an amber banner appears across every screen naming the company, and every action taken inside is recorded against the administrator's own account. The customer can see the session. There is no hidden access.

SCREEN 12.1 · PORTAL — PLATFORM CONSOLE

Module	In-app Portal	Available to	Platform super administrator
--------	---------------	--------------	------------------------------

[SCREENSHOT PLACEHOLDER - PLATFORM CONSOLE]

Insert PLATFORM CONSOLE screenshot here.

1. Purpose

The multi-company console: every client company on the HRMS, their headline figures, and the way in to any of them for support.

2. UI Components

UI element	What it shows
Heading	"Platform" with the line "Every company on this HRMS."
Stat cards	Companies · Active · Employees · Subscriptions.
Search	"Search companies..." — matches name, code and email.
Table columns	Company (a brand-colour dot, the name, the code and the email), Plan, Employees (with "{limit}" where capped), Payslips, Pending, Last sign-in, Status, and an action column.
Status badges	active (green), trial (amber), suspended (red), inactive (neutral).
Never signed in	An amber warning triangle and the word "never" in the Last sign-in column.
In support	A life-buoy icon and an "in support" badge on any company with an open session.
Footer note	"These are totals only. Opening a company with Manage starts a support session — it is recorded, the customer can see it, and every action taken inside is attributed to you."

3. Icons & Buttons

Icon / control	Label	What it does
Log-in	Manage	Opens a support session inside that company.
Life-buoy	in support	Marks a company with a session already open.
Alert triangle	never	Marks a company that has never signed in.

4. How to Use

1. Sign in as the platform administrator. You land here rather than on a company dashboard.
2. Read the four stat cards for the platform's position.
3. Search for the company you need.
4. Check the Last sign-in column — "never" flags a customer who has been provisioned but has not started.
5. Click Manage to enter that company's account.

6. Work inside it exactly as their own administrator would, then exit from the banner.

5. User Actions

Action	Where / how
Find a company	Search by name, code or email.
See who has not started	Look for the amber "never" in Last sign-in.
See where leave is piling up	The Pending column.
Enter a company	Manage.

6. Expected Result

After this action	The application does this
Manage is clicked	"Support session opened", the cached data is cleared and the browser lands on that company's dashboard.
Opening the session fails	"Could not open the support session".
A company already has a session open	It carries a life-buoy icon and an "in support" badge.
No company matches the search	"No companies match that search."

7. Block Diagram

◆ Is a support session already open?

SCREEN 12.2 · SUPPORT SESSION BANNER

Module	In-app Portal	Available to	Platform super administrator (visible to the customer)
--------	---------------	--------------	--

[SCREENSHOT PLACEHOLDER - SUPPORT MODE BANNER]

Insert SUPPORT MODE BANNER screenshot here.

1. Purpose

A banner that cannot be dismissed, shown across every screen while a platform administrator is working inside a customer's account. It exists so that support access can never be forgotten by the person using it, or hidden from the customer.

2. UI Components

UI element	What it shows
Banner	A full-width amber bar above the top bar, on every screen.
Label	"SUPPORT MODE" in capitals with a life-buoy icon.
Message	"You are inside {company name}. Everything you do here is recorded against your account."
Exit	A cross icon and the word Exit at the right end.
When it appears	Only while a super administrator has an open session inside a company. Nothing is rendered otherwise.

3. Icons & Buttons

Icon / control	Label	What it does
Life-buoy	SUPPORT MODE	Marks the session.
Cross	Exit	Ends the session.

4. How to Use

1. The banner appears on its own as soon as a support session is opened.
2. Do the work the customer asked for, and nothing else.
3. Click Exit when finished.
4. The cached data is cleared and the platform console returns.

5. User Actions

Action	Where / how
End the session	Exit.
Confirm which company you are inside	Read the banner.

6. Expected Result

After this action	The application does this
Exit is clicked	"Support session closed", the cache is cleared and the platform console returns.
Ending the session fails	"Could not close the session".
No session is open	The banner is not rendered at all.
The customer signs in during a session	They see the same banner, naming the administrator's presence.

WHY IT CANNOT BE DISMISSED

A banner that can be closed is a banner that will be closed, and then forgotten. This one has no dismiss control — the only way to remove it is to end the session.

7. Block Diagram

8. Workflow

13 Appendices

Reference material, kept out of the screen catalogue so that the catalogue stays readable: every status value and its colour, every message the application produces, a troubleshooting table, the screenshot tick-list, a glossary and a one-page card for each of the three main roles.

13.1 Appendix A — Status & Badge Reference

Every status value the application can display, what it means, and the colour it is drawn in. The colours are defined once and used everywhere, so a status means the same thing in every module.

Attendance

Status	Colour	Meaning	Where
present	Green	A full day was worked.	Attendance module · Attendance page · Team tab
half day	Amber	A partial day was worked.	Attendance module · Attendance page
on leave	Neutral	Approved leave was taken.	Attendance module · Attendance page
absent	Red	No attendance and no approved leave.	Attendance module · Team tab
late	Amber	The check-in was after the expected time. On the phone this badge replaces the status, because the times are already on the row.	Attendance module · Attendance page

Leave

Status	Colour	Meaning	What happens next
pending	Amber	Submitted and waiting on an approver.	An approver decides. The employee may still cancel it.
approved	Green	Granted. The days are deducted from the balance.	The days appear in the attendance record as "on leave".
rejected	Red	Refused, with a reason of at least ten characters.	The reason replaces the dates in the row's subtitle on the phone.

Tasks

Status	Colour	Meaning	Next step
assigned	Neutral	Given to somebody but not started.	Move to in progress
in progress	Amber	Being worked on.	Move to review
review	Amber	Done and awaiting a check.	Move to completed
completed	Green	Finished. Progress is set to 100 % automatically.	Nothing — the flow ends here

Projects, assets, employees and candidates

Module	Status values and their colours
Projects	planning (neutral) · active (green) · on hold (amber) · completed (green)
Project & task priority	low (neutral) · medium (amber) · high (red)
Assets	available (green) · assigned (amber in the portal, neutral on the phone) · maintenance (amber / neutral) · retired (red / neutral)
Employees	active (green) · on notice (amber) · inactive (neutral) · exited (red)
Candidates	applied (neutral) · interview scheduled (amber) · interviewed (default) · offered (green) · joined (green) · rejected (red)
Announcements	news (green) · holiday (amber) · event (default) · general (neutral) · plus a "pinned" amber flag
Bank accounts	Verified (green) · Unverified (amber) · plus "Payout account" on the primary one
Companies (platform)	active (green) · trial (amber) · suspended (red) · inactive (neutral)
Email log	sent (green) · failed (red) · anything else (amber)

TWO WORDS THAT MEAN DIFFERENT THINGS

"Assigned" is a genuine collision. An assigned task is simply not started; an assigned asset is out with somebody and properly accounted for. It is drawn neutral rather than green so that it reads correctly for both. Any status the system gains in future that is not mapped falls back to neutral — a plain badge rather than a misleading colour.

13.2 Appendix B — Message & Error Reference

Every message the application shows, what it means, and what to do about it. Messages are quoted exactly as they appear.

Sign-in and session

Message	What it means	What to do
Invalid email or password	No login exists for that email, or the password is wrong.	Check the address. Tap the eye icon and check what was typed. If nobody in the company can sign in, the accounts have not been created — contact the administrator.
This account is not active	The login worked, but the employee record behind it is not active.	An administrator sets the employee's status back to Active on their record.
The server returned an unexpected response. Check apiUrl in app.json.	The request reached something other than the HRMS API — a tunnel warning page, or the wrong host.	A technical fix. The server address in the app's configuration is wrong or the tunnel is down.
Could not reach the portal.	The Portal tab could not load the web application.	Tap Try again. If it persists, the server address is wrong or the server is down.

Attendance and biometrics

Message	What it means	What to do
This device has no fingerprint or face sensor.	The handset has no biometric hardware the app can use.	Use the portal's own Check In and Check Out buttons instead.
Set up Face ID, Touch ID or a fingerprint in your phone's settings first.	The hardware exists but nothing is enrolled in it.	Enrol a fingerprint or a face in the phone's own settings, then return to the app.
Set a screen lock on your phone first.	There is no PIN, pattern or password on the handset.	Set a screen lock. Without one the check-in key cannot be stored securely.
Setup failed	The key was generated but could not be registered with the server.	Try again. Any half-written key has already been cleared, so the retry starts clean.
Not recorded — Biometric check failed	The fingerprint or face was not recognised, or the signature did not verify.	Try again. If it keeps failing, remove the device from Profile and set it up afresh.
Checked in — Verified, photo saved	Success, with a photo attached.	Nothing.
Checked in — Verified	Success, without a photo — the camera was not allowed.	Allow the camera on the Check in tab if a photo is wanted.
Could not check in / Could not check out	The portal's plain check-in failed.	Check the connection and try again.
Check-in cancelled	The browser's biometric prompt was dismissed.	Nothing — a dismissed prompt is a decision, not a failure.
Camera blocked — check-in still works	The browser was refused camera access.	Allow the camera in the browser's site settings if a photo is wanted.

Leave

Message	What it means	What to do
Leave request submitted	The request was created and is pending.	Nothing. Watch for the decision.
Not applied — {reason}	The database refused it: no balance, dates the wrong way round, or an overlap.	Read the reason. Correct the dates, or choose a leave type with days left.
End date must be on or after the start date	The two dates are the wrong way round.	Correct them.
Select a leave type	No leave type was chosen in the portal dialog.	Choose one.
Leave approved	The approval was written and the note attached.	Nothing.
Leave rejected — they will see your note	The rejection and its reason were written.	Nothing. The employee will read the note.
Please give at least 10 characters — they will read this.	A rejection was attempted without a usable reason.	Write a reason. A refusal that explains itself saves a conversation.

Message	What it means	What to do
Could not approve leave / Could not reject leave	The decision was refused.	Most often the caller is not permitted to decide this request. Check the role.
Leave request cancelled	A pending request was withdrawn.	Nothing.
Could not cancel request	The withdrawal failed — usually because it has already been decided.	Refresh and check its status.

People, payroll and documents

Message	What it means	What to do
Employee added / Employee updated	The record and, on creation, the login were written.	Give the person their temporary password.
Something went wrong. Please check the form and try again.	The employee form was refused.	Check the highlighted fields. Most often the email is already in use or the account service is unavailable.
Invalid PAN format (e.g. ABCDE1234F)	The PAN does not match the standard pattern.	Five letters, four digits, one letter.
Aadhaar must be 12 digits	The Aadhaar number is the wrong length.	Twelve digits, no spaces.
Invalid IFSC format (e.g. HDFC0001234)	The IFSC does not match the standard pattern.	Four letters, a zero, then six characters.
Minimum 8 characters	The temporary or new password is too short.	Use at least eight characters.
Employee removed / Could not remove employee	The account was deleted, or the deletion failed.	Consider setting the status to Exited instead of deleting.
Generated {n} payslip(s)	The payroll run produced that many payslips.	Check the count against the headcount. Anyone without a salary structure produces none.
Could not generate payroll	The run failed.	Confirm the salary structures exist and try again.
Salary structure saved / Could not save salary structure	The structure was written, or the write failed.	Every field is required, including the effective date.
Could not generate PDF	The payslip or letter PDF could not be produced.	Try again from the dialog.
Photo updated / Could not upload photo	The profile photograph was replaced, or the upload failed.	Check the file is an image and try again.
Policy created / Policy updated / Policy removed	The policy was written or deleted.	Nothing.
Could not generate letter	The letter could not be produced.	Confirm the employee has the details the letter needs — a joining date, a designation.

Everything else

Message	What it means
Not done — {reason}	A row action was refused. The reason comes from the database and is shown exactly as it arrived.
Status updated · Progress updated · Assignee updated · Project updated · Priority updated	That field of the task was written.
Could not update {field}	That change was refused — usually a permission the role does not hold.
Task created / Task updated / Task deleted	The task was written or removed.
Project created / Project updated	The project was written.
Member added / Member removed / Could not add member	Project membership changed, or the change failed.
Asset added / Asset updated / Asset assigned / Asset returned / Asset removed	The asset register changed.
Could not assign asset / Could not return asset / Could not remove asset	The change was refused.
Candidate added / Status updated / Interview scheduled / Candidate removed	The recruitment record changed.
Announcement posted / Announcement updated / Announcement removed	The announcement changed.
Event added / Could not add event	The calendar entry was written, or the write failed.
Department created / updated / removed · Designation created / updated / removed	The organisation structure changed.
Company profile updated / Could not update company profile	The company name and address were written, or the write failed.
Bank account added / Bank details updated / Account verified	The bank record changed.
Could not save bank details / Could not verify this account	The change was refused — check the role against Section 10.
Email settings saved / Could not save the email settings	The SMTP configuration was written, or the write failed.
The test email could not be sent	The SMTP settings do not work end to end. Use Test connection to narrow it down.
Password updated / Could not update password. Check your current password.	The password was changed, or the current password was wrong.
Device removed / This device is set up for biometric check-in	The device enrolment changed.

Message	What it means
Support session opened / Support session closed	A platform administrator entered or left a customer's account.
Could not send the message	The message did not go. The text is kept in the box so it can be sent again.

13.3 Appendix C — Troubleshooting

Symptom	Likely cause	Fix
Nobody in the company can sign in	The accounts have not been created yet — the system creates tables, not people.	The administrator adds employees, or the demo accounts are seeded.
One person cannot sign in, everyone else can	Either no login exists for that address, or their employee record is not active.	"Invalid email or password" means the login is missing. "This account is not active" means the record is. The two have different fixes.
The correct password is rejected	The keyboard capitalised the first character, which a masked field does not show.	Tap the eye icon and check what was actually typed.
"Set up biometric check-in" is not offered	The phone has no screen lock, no enrolled biometric, or no sensor.	Read the amber panel on the Check in tab — it names which.
The check-in button does nothing	The biometric prompt was dismissed.	Nothing was recorded. Tap Check in again and confirm with the fingerprint.
Somebody else's name appears on my check-in	A shared handset where the previous person did not sign out.	Sign out, sign in as yourself, and use Profile → Remove this device if the key belongs to somebody else.
The Portal tab is blank or shows an error	The portal could not be reached, or the server address is wrong.	Tap Try again. If it persists it is a server-side fix.
The portal shows the previous person's data	A session that was not cleared.	Sign out fully and sign back in. The portal is given a fresh session and the old cache is cleared.
A module tile is missing	The signed-in role is not offered that module.	Check Section 4.3. Reporting Manager, for example, is HR and above only.
A count on Home shows an em dash	That one query failed while the rest of the screen loaded.	Pull down to refresh. An em dash is deliberately not a zero.
Payroll produced fewer payslips than expected	Some employees have no salary structure.	Set their structures on the Payroll page and run again.
Payslips show the wrong company name	The company profile was set after those payslips were generated.	Correct the profile, then regenerate the affected payslips.
A payslip has no logo or signature	The images have not been uploaded to the bank record.	Portal → Company Bank Details → Logo and Signature.

Symptom	Likely cause	Fix
The bank account cannot be verified	The signed-in role is HR Admin, which may edit but not verify.	A Founder, Company Admin or Accounts Manager verifies it.
Reports or Settings is missing from the navigation	Those are HR and above.	Check the role on the employee record.
Emails are not being delivered	The server is in development mode, or the SMTP settings are wrong.	Portal → Settings → Email / SMTP: read the banner, use Test connection, then Send test email.
An employee sees everyone's attendance	They should not, and they do not — the Attendance module is scoped to the signed-in person for every role.	If a company-wide view is wanted, it is Portal → Attendance → Team, and it is HR and above.
A message was typed but did not send	The send failed; the text was deliberately kept.	Check the connection and press send again.
Attendance shows no check-out	The person did not check out.	The hours cannot be computed. HR can see this on the Team tab as an em dash in the Check Out column.

13.4 Appendix D — Screenshot Checklist

Every screenshot placeholder in this document, in the order it appears. Tick each one as the image is pasted in. Capture on a real handset in portrait at its native resolution; the frames resize to fit.

SEVENTY-TWO SCREENSHOTS, IN THREE SITTINGS

Capture the mobile screens first, in one pass through the app as an employee. Then sign in as an HR Admin and capture the portal screens for Sections 9. Then as a Founder for Section 10. Screens 12.1 and 12.2 are platform-side and are only needed if the document is going to the party that operates the HRMS.

13.5 Appendix E — Glossary

Term	Meaning
Aadhaar	A twelve-digit Indian identity number, stored on the employee record and readable only by HR and by the employee themselves.
Bearer token	The proof of a signed-in session, stored securely on the phone and sent with every request.
Biometric check-in	Attendance recorded with a fingerprint or face check. The phone signs a challenge with a key only that biometric can unlock; the server verifies the signature.
Block diagram	In this document, a layered picture of how a screen is built — what the user touches, what the app does with it, what is sent, and what the database decides.
Challenge	A one-time value the server issues before a punch. Signing it proves the phone holds the enrolled key at that moment.
Column grant	A rule that withholds a specific column from a table entirely. PAN, Aadhaar and bank details are protected this way.
CTC	Cost to company — the annual figure that appears on an offer or appointment letter.
ESI / ESIC	Employees' State Insurance, a statutory deduction shown on every payslip.
IFSC	The eleven-character code identifying an Indian bank branch. Four letters, a zero, then six characters.
Keystore	The phone's own secure storage. A key held there can be released only after the operating system has checked a fingerprint or face.
Module	One of the twelve areas on the Modules tab, or one of the sixteen areas in the portal's navigation.

Term	Meaning
PAN	The Indian permanent account number. Five letters, four digits, one letter.
Payout account	The company bank account marked as the one salaries are paid from.
PF	Provident Fund, a statutory deduction shown on every payslip. Twelve per cent by default.
Portal	The full HRMS web application, reachable in a browser and carried inside the mobile app's Portal tab.
Pull to refresh	Dragging down from the top of a list to re-read it from the server.
Role	The single field on a person's record that decides everything they can reach. One of seven values.
Row-level security	The rule that decides which rows a person's query returns. An employee reads their own attendance; HR reads everyone's.
Salary structure	An employee's basic pay, allowances and statutory percentages. Payslips are computed from it.
Security-definer function	A database function that carries the permission check inside itself. Every write and every report is one.
Support session	A recorded, visibly banner-flagged period in which a platform administrator works inside a customer's account.
Workflow diagram	In this document, the end-to-end path through a screen, including its decision points and both outcomes at each.

13.6 Appendix F — One-Page Role Cards

A single page per main role, for printing and pinning up. Each names the daily tasks, where they are done and which screen documents them.

Employee — daily card

I want to...	Go here	Screen
Mark my attendance	Check in tab → Check in (fingerprint)	7.5
Mark the end of my day	Check in tab → Check out	7.5
